Ministry of Health & Family Welfare, Government of India
WHO Collaborating Center on Family of International Classifications
(ICD-10, ICF & ICHI)

The WHO Family of International Classifications (FIC)

The WHO constitution mandates the production of International Classification on Health so that there is a consensual, meaningful and useful framework, which the governments, providers and consumers can use as a common language. The WHO Family of International Classifications provides as framework to code a wide range of information about health (e.g. diagnosis, functioning and disability, reason for contact with health services) and uses a standardized common language permitting communication about health and health care across the world in various disciplines and sciences. These internationally endorsed classifications facilitate the storage, retrieval, analysis, and interpretation of data in a uniform format allowing comparability of data of a population over different periods and also between different populations. The basis for the WHO-FIC and the principles governing the admission of classifications are set out in the paper on the 'WHO-FIC'. This paper also provides protocol to those wishing to submit a classification for inclusion in the WHO-FIC.

Types of classifications

1. International Classification of Diseases (ICD)
2. International Classification of Functioning, Disability and Health (ICF)
3. International Classification of Health Interventions (ICHI)

CLASSIFICATIONS AND CLINICAL TERMINOLOGIES

Classifications capture snapshot views of population health using such parameters as death, disease, functional disability, health and health interventions which inform management and decision makers in the health system. Overtime, they provide insight on the trends, which informs the planning and decision-making processes by health authorities. The varied applications in health information systems and the general availability of Information and Telecommunication Technologies (ICT) have highlighted the need for increased interoperability.

The baseline information that is aggregated for public health purposes is increasingly derived from health records, which contain both patient care related information and also information that is crucial for management, health financing and general health system administration. The accuracy and consistency of the health records is crucial to ensure the quality of care and sound management of health systems resources. This call for accurate and consistent use of clinical terminologies and recognition of the particular importance of semantic interoperability. Possible synergies between classifications and clinical terminologies have been identified crucial for future work, particularly in the perspective of a growing automation of information processing. WHO and its network of collaborating centers are taking steps in that direction.

International Classification of Diseases (ICD)

The ICD is the international standard diagnostic classification for all general epidemiological, many of population groups and monitoring of the incidence and prevalence of diseases and other health problems in relation to variables such as the characteristics and circumstances of the individuals. In 1967, the World Health Assembly adopted the WHO Nomenclature Regulations that stipulate use of ICD in its most current version for mortality and morbidity statistics by all member states. The currently in use the tenth version of ICD (ICD-10) was endorsed by the Forty third World Health Assembly in May 1990 and came into use in WHO member states from 1994. It is being used to classify diseases and other health problems recorded on many types of health and vital records including death certificates and health records. In addition to enabling the storage and retrieval of diagnostic information for clinical, epidemiological, and quality purposes. These records also provide the basis for the compilation of national mortality and morbidity statistics by WHO member states.

International Classification of Functioning, Disability and Health (ICF)

The ICF is a classification providing a unified and standard language and framework for description of health and health related domains. These domains are classified from body, individual and societal perspectives by means of two lists: a list of body functions and structure and a list of domains of activity and participation. Acknowledging that every human being can experience a decrement in health and there by experience some degree of disability, it measures health and disability at both individual and population levels. Since an individual's functioning and disability occurs in a context, the ICF also includes a list of environmental factors. Thus, it 'mainstreams' the experience of disability and recognizes as a universal human experience. By shifting the focus from cause to impact, it places all health conditions on an equal footing allowing their comparability using a common metric – the ruler of health and disability. Further, more ICF takes into account the social aspects of disability and does not see disability only as a medical or biological dysfunction. By including contextual factors, in which environmental factors are listed ICF allows record the impact of the environment on the person's functioning. The ICF was officially endorsed by all 191 WHO Member states in the Fifty-fourth World Health Assembly on 22 May 2001 (resolution WHA 54.21).

All the Health/Medical Care Institutions in India to efficiently use ICD-10 & ICF. For more details on WHO-FIC, kindly visit website www.who.int/classifications

Information to our readers

The latest data depicted in this publication have been collected from various source agencies. CBHI relies on these source agencies to compile the data for National Health Profile namely (a) Central Ministries/ Departments (b) Health Authorities of all States/UTs (c) Autonomous Organizations & other Agencies, and have been indicated at the bottom of each table. We make every effort for quality of data however, the source agencies are solely responsible for the accuracy or otherwise of data depicted in the publication. In case of doubt, source agency may kindly be contacted.

The non-reporting/under coverage of data, column of information for different reference periods and number of reporting institutions etc. have been explicitly mentioned /shown in the tables.

MESSAGE

Availability of timely and reliable data is the backbone of policy formulation and planning process in any organisation and an integral part of governance. Access to accurate data on health sector parameters allows formulation of well-informed and focused policies and programmes which in turn help in attaining prescribed health outcomes. The National Health Policy 2017 recognizes the need for an Integrated Health Management Information System with comprehensive data on availability and utilization of services along with diseases of public health importance.

2. The 15th issue of annual publication - National Health Profile (NHP) 2020 - provides comprehensive information related to health sector and ensures that all data pertaining to public-funded surveys related to health are available in user-friendly formats at one place and in public domain. The updated information from this publication shall provide relevant Statistics to the policy makers, planners, health administrators, decision-makers and researchers, so as to contribute to the improvement of the healthcare service delivery in the country.

3. I take this opportunity to appreciate tremendous efforts put in by the team of Central Bureau of Health Intelligence (CBHI) and other stakeholders in collection, collation and compilation of such a voluminous database from across the country in timely manner, especially in times of COVID-19 pandemic. I hope that this edition of NHP with up to date information shall meet the expectations of the stakeholders.

संदेश

मुझे यह जानकर अत्यंत प्रसन्नता हो रही है कि स्वास्थ्य एवं परिवार कल्याण मंत्रालय, स्वास्थ्य सेवा महानिदेशालय के तत्वावधान में केंद्रीय स्वास्थ्य आसूचना ब्यूरो (सी बी एच् आई), "राष्ट्रीय स्वास्थ्य प्रोफाइल – 2020 " नामक अपने वार्षिक प्रकाशन का 15वां संस्करण और उसकी ई – पुस्तक जारी कर रहा है। इस पुस्तक में देश के स्वास्थ्य क्षेत्र से सम्बंधित छह महत्वपूर्ण और गौर करने लायक स्वास्थ्य संकेतकों पर व्यापक सूचना प्रदान की जाती है।

इसके अवलोकन पर मैंने पाया कि इसमें उल्लिखित सूचना स्वास्थ्य के क्षेत्र में नीति निर्माण, कार्यान्वयन, शासन और विनियमन के लिए महत्वपूर्ण है। यह सभी स्वास्थ्य सम्बन्धी नीतियों और तंत्रों में निर्णयन का आधार है।

इस अवसर पर मैं इस प्रकाशन के नवीन संस्करण के समेकन और प्रकाशन के लिए निदेशक के नेतृत्व में सी बी एच् आई की पूरी टीम की सराहना करता हूँ। मैं भविष्य में सभी कार्यों के लिए भी उनकी सफलता की कामना करता हूँ और उनसे सर्वश्रेष्ठ की उम्मीद करता हूँ।

Message

It gives me immense pleasure to know that Central Bureau of Health Intelligence (CBHI) is releasing the 15th edition of annual publication titled 'National Health Profile 2020'. This publication provides vital information on significant health related indicators. Owing to the current situation globally and in India, for the first time the document also comprises a separate chapter on 'Pandemics' which provides detailed information about history of pandemics/ epidemics and global and India specific estimates of morbidity and mortality associated with such diseases. In addition, it also gives an insight into the work of CBHI and its collaboration with World Health Organization for implementation of Family of International Classifications (ICD-10 & ICF) in India.

The updated health information is essential for policy formulation, planning and informed decision making and enables effective implementation as well as monitoring of various schemes. I take this opportunity to applaud all the stakeholders involved, especially the team of CBHI for their painstakingly meticulous work in compiling such huge database, which will act as a useful reference manual for policy makers, planners, administrators, managers, researchers and academicians involved with health sector development in India.

FOREWORD

The Central Bureau of Health Intelligence (CBHI) has been releasing its annual publication “National Health Profile (NHP)” on a regular basis since 2005. This year too, despite the difficulties that arose due to COVID-19 pandemic, the CBHI team through prolonged, systematic and genuine efforts collected an enormous amount of national data from the Directorates of Health & Family Welfare of all the States/UTs, Central Government Organizations, National Health Programmes and various other concerned national and international agencies in India.

This publication is of national significance as it brings out extensive Health Information under six major domains viz. Demographic, Socio-Economic, Health Status, Health Finance, Health Infrastructure and Human Resources for the specific year. An additional chapter on pandemics providing detailed information on history of pandemics/epidemics along with associated morbidity and mortality data at global and India level has also been included. All this information is much more relevant and required for an efficient functioning of public health system for enhanced health outcomes. The sources as well as constraints of the data are also indicated.

The 15th edition of NHP includes updated information from concerned State/UTs, Central Government Ministries and other organizations/agencies. It is expected that this national reference document shall be of immense support to all concerned government departments & institutions, public sector enterprises, non-government organizations, policy makers, planners, administrators, managers, researchers and academicians for a strong and efficient health system in India.

I would like to applaud Director, CBHI and her entire team for publication of this 15th edition of ‘National Health Profile’ despite challenging environment due to COVID-19. The ideas on further improvement of this publication will be highly appreciated and may kindly be shared with CBHI, Directorate General of Health Services, Government of India.

Dr MADHU RAIKWAR
DDG & DIRECTOR

From the Director's Desk

Updated and reliable health database is the foundation of decision-making across all health system building blocks. In order to achieve one of the objectives, Central Bureau of Health Intelligence collects data from the health and other relevant sectors, ensuring their overall quality, relevance and timeliness, and converts data into information to support planning, management, and decision making for health system policy development and implementation, governance and regulation, health research, human resources development, health education and training, service delivery and financing.

We believe that the data-powered revolution in health care is well underway and look forward to see how innovations continue to shape and improve patient care. Updating information on demographic, socio-economic, health status, health financing indicators, health infrastructure and human resources in health sector in India has made "National Health Profile" (NHP) much acclaimed, topical and comprehensive.

I would like to express my gratitude to many people who saw through this book; to all those who provided support, talked things over, read, wrote, offered comments, allowed us to share their data and assisted in the editing, proof-reading and design.

I thank for the continuous support and co-operation received from all the States and Union Territories, office of Registrar General of India, National health program divisions, Indian council of medical research, medical / nursing / dental councils of India, IEG, IRDA and different related union ministries in providing updated information for this important publication. The valuable support from all the staff of CBHI head quarter and of each field survey units in data compilation and preparation of analytical write up of publication need special mention.

I also would like to give special thanks to WHO and SCHOOL team who were standing and supporting us right from the beginning till end of this publication. I hope 'National Health profile' with more information and analysis will meet the expectations of our readers. The digitization of the Healthcare industry is happening fast. To realise its importance, digital version (e-book) of National Health Profile is also available on our website. The feedback and valuable suggestions from various users of this document had been very encouraging in the past and we solicit such continuous support in future through email at dircbhi@nic.in.

India: Country Overview

"If there is one place on the face of earth where all the dreams of living men have found a home from the very earliest days when man began the dream of existence, it is India."

-Romain Rolland

The Republic of India (Bhārat Gaṇarājya) is Sovereign Socialist Secular Democratic Republic with a Parliamentary system of Government. India is the seventh largest country by area with a population of 1.3 billion. The country covers an area of 32,87,263 sq. km in the Asia continent and extends between latitudes 8° 4' and 37° 6' north, longitudes 68° 7' and 97° 25' east, lying entirely in the northern hemisphere. It is bounded by Great Himalayas in the north, Indian ocean in the south, Bay of Bengal on the east and Arabian sea on the west. India shares land borders with Afghanistan and Pakistan to the north-west; China, Bhutan and Nepal to the north; Myanmar to the east; and Bangladesh to the east of West Bengal. Sri Lanka is separated from India by a narrow channel of sea, formed by Palk Strait and the Gulf of Mannar.

India comprises of 28 States and 9 Union Territories. Physically, the mainland comprises of four regions, namely, the great mountain zone, plains of the Ganga and the Indus, the desert region and the southern peninsula. The extensive network of Himalayan and peninsular rivers rises from the Himalayan ranges in the north and Western and eastern ghats in the south and drains the vast stretches of the flat alluvium. According to IUCN, India is a megadiverse country with only 2.4% of the world's land area, accounts for 7-8% of all recorded species, including species of plants and species of animals. The climate of India is of monsoon type with regional variations.

Indian economy has performed well in recent years with an average annual GNI growth rate of 6.82% between 2011 and 2018¹. According to IMF's World Economic outlook 2020, India became the world's fifth largest economy in terms of nominal GDP surpassing France and UK. India is 17th largest exports economy in the world as in 2017, India exported \$292B whereas GDP of India was \$ 2.6 trillion².

The country has become self-sufficient in agricultural production and is one of the top industrialised country in the world and emerged as an important regional power. High economic growth rate and government measures such as MGNREGA, Direct Benefit Transfers, PM Kisan Yojana, LPG subsidy and others have resulted in reduction of poverty from 270 million poor in 2011 to 84 million as on 2017³. In recent years India has undertaken important reforms to spur economic growth such as introducing the bankruptcy code, implementation of the GST to integrate the national market and undertook a series of reforms to ease the conduct of business.

India played a prominent role in the formulation of the United Nations Sustainable Development Agenda 2030 and much of the country's National Development Agenda is mirrored in the Sustainable Development Goals (SDGs)⁴. India's composite score has improved from 57 in 2018 to 60 in 2019, thereby showing noticeable progress. The maximum gains been made in Goals 6 (clean water and sanitation), 9 (industry, innovation, and infrastructure) and 7 (affordable and clean energy). In 2011, the adult literacy rate was 74.04% and life expectancy at birth was 67.1 years⁵.

India's TFR is 2.3 in 2016 which is significant decline from 3.2 in 2000⁶. Maternal Mortality Ratio (MMR) of India has declined to 167 per 1,00,000 live births for 2011-2013 from 212 per 1,00,000 for 2007-2009 against the global MMR of 216 per 1,00,000 live births in 2015⁷. The present level of IMR is 33 infant deaths per thousand live births, for the year 2017 which is about one-fourth as compared to 1971, 129 infant deaths per thousand live births⁸. The proportion of women age 15-49 in India who received ANC has risen from 80% in NFHS-3 (2005-06) to 84% in NFHS-4 (2015-16). Skilled assistance during deliveries in India has increased substantially; the proportion of births assisted by a skilled provider increased from 47 percent in 2005-06 to 81 percent in 2015-16⁹.

EXECUTIVE SUMMARY

Good Health confers on a person or groups freedom from illness - and the ability to realize one's potential. Health is therefore best understood as the indispensable basis for defining a person's sense of well-being. Health care is not merely medical care, is aligned with cultural understanding of ill health and well-being, extent of socio-economic disparities, reach of health services and quality and costs of care along with current bio-medical understanding about health and illness. With the second-largest population in the world, India is home to over 1.3 billion people. At an average of two children born per woman in 2018, the country's birth rate stood at 18.6 for every thousand inhabitants. The average life expectancy has seen a consistent increase since the 1920s and was around 69 years in 2017.

Historically the Indian commitment to health development has been guided by two principles. The first principle is 'state responsibility' for health care and the second is free medical care for all, and not merely to those unable to pay. Our country began with a glorious tradition of public health, as seen in the references to the descriptions of the Indus valley civilization which mention "Arogya" as reflecting "holistic well being." The Chinese traveller Fa-Hien (AD 399–414) takes this further, commenting on the excellent facilities for curative care at the time. Today, we are a country with enormous diversity, and therefore, an enormous challenge to the healthcare delivery system. This brings into sharp focus the global commitment of WHO to achieve Universal Health Coverage till 2030 under Sustainable Development Goals (SDGs); Target 3.8: Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all.

Ayushman Bharat - Pradhan Mantri Jan Arogya Yojana (AB-PMJAY), the government scheme to make healthcare facilities available and accessible to the economically weaker segment of the population, is indeed one such step. The year 2020 is witnessing further footsteps to empanel more healthcare providers, especially in small towns, towards the aim of having 1.5 lakh Health and Wellness Centres and covering at least 50 crore beneficiaries from 10 crore financially vulnerable families under Rs 5 lakh per family, per year coverage in secondary and tertiary care hospitalization, by 2022. With an aim to bring low-cost treatment close to people's homes while targeting non-communicable diseases, maternal and child health as well as to provide essential drugs and diagnostic services at affordable prices, the government regulations are paving the way for enhanced and customized infrastructure, facilities and technology for creating bigger and collaborated footprints in the country.

The much desirable National Digital Health Mission will help create an integrated nationwide database of health service providers, patient records over care continuum and patient consent management using open API framework. Technology thus aims to ensure proper integration of available data from all sources and make it available for analytics, and these dramatic changes in healthcare data processing, supported by cloud-based technology ecosystems and healthcare innovations, will provide newer understanding for health care strategies in near future and overall well being for entire India in times to come. The mission aims to create a management mechanism to process digital health data and facilitate its seamless exchange; develop registries of public and private facilities, health service providers, laboratories and pharmacies; and to support clinical decision-making as well as offer services like telemedicine. The NDHM has the potential to make the health system more evidence based, transparent and efficient. Thus, healthcare has always been a priority sector for India.

The Government of India has made concerted efforts in putting into action policies and programmes that resonate with the targets set in SDGs focusing on reducing Under Five Mortality Rate (U5MR) and Neonatal

Mortality Rate, ensuring universal access to health coverage and an increase in recruitment, development, training and the retention of health care service providers.

In India, the rising economic growth with enhanced fiscal capacity of the government, the changing health needs of the population and the growing incidences of catastrophic expenditure due to health care costs have necessitated a policy and programme response to reach everyone in a comprehensive integrated way. Under the National Health Mission, the Government of India has made concerted efforts to engage all relevant sectors and stakeholders to march in the direction of achieving universal health coverage and delivering quality health care services to all at affordable cost. Concerted and sustained efforts by the Government of India have resulted in significant reductions in maternal mortality ratio and child mortality rate. Today, the Indian health care network is among the largest in the world as it reaches out to every mother and child in the country through a continuum of care approach across all life stages.

With the epidemiological changes that are taking place in India, there will be growing requirement for more information on planning of health services so as to facilitate informed decision-making for the benefit of the country. The main sources of health information are the central and state agencies. The indirect sources constitute Census, Civil Registration System and Sample Registration System. While the direct sources encompass the sample surveys and official statistics, which are generally based on built-in information collected for any official programmes.

We are entering into a new era in global health. The country is witnessing the process of rapid health transition, which not only includes demographic and epidemiological transition but nutritional and socio-cultural transitions as well. This has immediate and far reaching implications for health policy making and programmes. Further, the demand for health statistics has increased, especially in the context of growing interest on evidence-based planning in health programmes as well as promoting the values of transparency and accountability as essential requirements of democratic governance at various levels in India as well as globally.

Health management requires the monitoring of the health status of the population, the provision of services as to the coverage and utility, drugs stocks and consumption patterns, equipment status and availability, Finances, personnel on a regular basis. This requires timely and accurate information from various sources. Central Bureau of Health Intelligence (CBHI) is the health intelligence wing of the Directorate General of Health Services. At the national level, it is the main organization which deals with the collection, compilation, analysis and dissemination of the information on the health conditions in the country covering various aspects of health including the health status, health resources, utilization of health facilities etc.

NHP 2020 comprises all of the systematic updates on all required indicators. The chapter on demographic indicators for India reveals population size, composition, geographic distribution and growth in a given geographical distribution. It also reveals their relationship with social, economic and behavioral factors. Main sources of demographic data are census which is conducted at a decadal interval, vital events registration (Birth, death and marriages), population surveys, population projections and Sample Registration System (SRS). It examines some of the key aspects that pertain to expected population increase from 121.1 crores to 151.8 crores during the period 2011-2036 - an increase of 25 percent in twenty-five years at the rate of 1.0 percent annually. Similarly, the sex ratio of the total population (females per 1000 males) is expected to increase from 943 in 2011 to 957 during 2036, and the sex ratio at birth is expected to increase from 906 in 2011 (SRS) to 909 in 2031. The proportion of population in the working age-group 15-59 years is expected to rise from 60.7 percent in 2011 to 65.1 percent in 2036. The average age of Indians is expected to be of 34.7

years in 2036 as compared to 24.9 years in 2011. Further, the SRS abridged tables 2013-17; which gives the Life Expectancy of Life at Birth show it has increased from 49.7 years in 1970-75 to 69.0 years in 2013-17. IMR for the country has come down to 32 in 2018 from 40 in 2013, a decline of 8 points over last 5 years and an annual average decline of about 1.6 points. The level of registration of births was 89.3% in 2018.

The chapter on socio-economic status elaborates multi-factorial “conditions” like environmental, material, and personal characteristics that interact elaborately. In this context, the chapter provides with the latest data of the socio-economic indicators, according to State and Union Territory, as these factors influence health/nutrition outcomes through complex pathways of change. The socio-economic factors included in this chapter are “literacy & school enrolment”; “age at effective marriage,”; “economic factors”; “per capita availability of cereals & pulses”; “employment rates,”; and household amenities. The key highlights of the chapter pertain to aspects such as: the gross enrolment ratio for both girls and boys in schools in India in primary grades in 2017-18 was near-universal at 95% and 93%, respectively. However, by the time students reach higher secondary grades, the enrolment ratio drops to 57% and 56%, respectively. At the national level, the mean age at effective marriage of females remained almost constant at around 22 years from 2015 to 2018. Poverty levels are higher in rural India (26%) than urban (14%). In 2019-20, among the populous states, per capita NDP was above INR 150,000 in Haryana, Karnataka, Tamil Nadu, and Telangana, while it was below INR of 50,000 in Bihar and Uttar Pradesh. At constant prices during 2011-12 to 2018-19, India registered an annual growth in GDP of 8.6%, from 87 lakh crores to 140 lakh crores. In 2019, 8439 habitations of 174 districts of 16 states were affected by the fluoride problem and 15,673 habitats of 75 districts had excessive arsenic present in water.

Strong longitudinal surveillance system is an integral part and a pre-requisite for any morbidity control programme, in a geographic area. Using surveillance data from a cross-section of populations (mainly public health facilities) in India, Chapter-3 presents latest burden of Communicable, HIV/AIDS and Non-communicable diseases (morbidity) and deaths associated to these morbidities (case fatality) - according to different States and Union Territories, and India as whole. This chapter also provides trends and latest status of maternal and child health situation in India and in its States and Union Territories. Wherever possible, burden of morbidity, deaths and maternal & child health indicators were presented for multiple years, that are most recent. This chapter also provides, cases and deaths due to other communicable diseases like: Cholera, Acute Diarrhoeal Morbidity, Enteric Fever (Typhoid), Acute Respiratory Infection, Tetanus Neonatal, Tetanus Other than Neonatal, Diphtheria, Whooping Cough, Measles, Viral Hepatitis (All Causes), Rabies, Pneumonia (All Causes), Meningococcal Meningitis, Syphilis, Gonococcal Infection - in India and its States/UTs in 2018 and 2019 by gender, using data from monthly health condition reports from Directorate of Health Services of the State/UT. Some of the key highlights pertain to: using surveillance data from the public and private sector facilities of all the States & UTs in India, in 2019, a total of 24,04,815 patient were notified of TB. Out of the total microbiologically confirmed cases (11,73,775, in 2019), 80% of the patients were successfully treated. With state-wise fluctuations, India has made significant progress in tackling HIV epidemic, from a prevalence of 0.95% in 2004 to 0.28% by 2016-17. Out of 6.8 crore people screened under National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS): 6.3% were diagnosed with hypertension, 4.9% with diabetes, 1.9% with HTN & DM, 0.3% with CVDs, 0.15% with stroke and 0.1% with common cancers. With huge interstate variations: 59% mothers in India had antenatal check-up in the first trimester; 79% deliveries in India are institutional deliveries; 42% children under age 3 years were breastfed within one hour of birth; and 62% children got fully immunized (BCG, measles, and 3 doses each of polio and DPT).

Healthcare financing is increasingly being recognized as an area of major policy relevance to achieve Universal Health Coverage (UHC). Appropriate Health Financing is a means to ensure adequate funds for health care, provide equitable access to all population groups and reduce barriers to utilize health services. The chapter on Health Financing provides with detailed information on – 1) Public health expenditure on health; 2) Average medical expenditure; and 3) Health coverage and insurance. Some of the key highlights to be looked at are: Per capita public expenditure on health in nominal terms has gone up from Rs 621 in 2009-10 to Rs 1112 in 2015-16; Urban and rural health services constituted 70% of the public expenditure on medical and public health in 2015-16; The North-Eastern states had the highest and EAG states (including Assam) had the lowest average per capita public expenditure on health in 2015-16 (excluding UTs); As per NSS 75th Round, Household income/savings and borrowing is the major source of financing of in-patient hospitalization for all quintiles in both rural and urban population. Average out of pocket expenditure for hospitalization cases is more in urban population than rural population across all quintiles. The per capita expenditure on CGHS during 2019-20 was Rs 11331. As of 31st March, 2019, around 13.56 crores of beneficiaries were covered under ESIS. The per capita expenditure on medical benefit under ESIS is Rs. 646 for the year 2019.

The chapter on human resources for health (HRH) focuses on planning, development, performance, management, retention, information, and research on human resources for the health care sector. In recent years, increased awareness of the critical role of HRH in strengthening health system performance and improving population health outcomes has placed the health workforce high on the health agenda. India's mandate for Universal Health depends to a great extent on adequate and effective HRH providing primary, secondary and tertiary level of care in both private and public sectors. The size and composition of HRH in India has significantly changed during the last decade. The recent health sector reforms in India, particularly since the launch of the National Rural Health Mission, have laid emphasis on strengthening HRH in the public sector system. With regard to the number of doctors, among the states, Maharashtra (1,83,843 doctors) has the highest number of registered doctors followed by Tamil Nadu (1,44,737 doctors), Karnataka (1,26,567), and Andhra Pradesh (1,02,924); there is also a steady rise in the total number of registered AYUSH Doctors in India from 7,73,668 in 2017 to 7,99,879 in 2018. Further, the number of HW (F) / ANM at Sub Centres and PHCs have increased from 2,19,326 in 2018 to 2,34,220 in 2019, which amounts to an increase of about 6.8%. The number of allopathic doctors at PHCs has increased from 27,567 in 2018 to 29,799 in 2019, which is about 8.09% increase. There are 9.29 lakh ASHAs under the NHM across the country in both rural and urban areas.

Health infrastructure is an important indicator for understanding the health care delivery provisions and welfare mechanisms in a country. Infrastructure has been described as the basic support for the delivery of public health activities. Public health infrastructure has been referred to as 'the nerve center of the public health system'. The chapter on health Infrastructure details out the indicators that are subdivided into three categories viz. educational infrastructure, public infrastructure and regulation of clinical establishments. Medical education infrastructures have shown rapid growth over past few years with 542 medical colleges (280 government; 262 private), and 81,400 MBBS seats, 2019-2020. Currently there are 1,892 institutions for ANM with 55,490 seats for admission, and 6,894 institutions with 2,72,519 Nursing seats in the country. As on 31st March 2019, there are total of 1,52,794 Sub Centres (SCs) (1,49,590 rural + 3,204 urban), 20,069 Primary Health Centres (PHCs) (16,613 rural + 3,456 urban), 5,685 Community Health Centres (CHCs) (5,335 rural + 350 urban), 1,234 Sub-divisional Hospitals, 756 District Hospitals, and 1,415 Mobile Medical Units present across the country. Out of 1,57,411 SCs, 7,821 SCs have been converted into Health and Wellness Centres (HWCs) in rural areas and out of 3,302 SCs, 98 SCs have been converted into HWCs in urban areas. Further, out of 24,855 rural PHCs, 8,242 PHCs have been converted into HWCs in rural areas and out of 5,190 urban PHCs, 1,734 PHCs have been converted into HWCs. So far, 22,186 Clinical establishments as on 2nd Jan 2020 have registered online forming part of digital National register.

A dedicated chapter on pandemics and epidemics reflects upon the intermittent outbreaks of infectious diseases that have had profound and long-lasting effects on societies throughout history. These have powerfully shaped the economic, political, and social aspects of human civilization, and have defined many of the basic tenets of modern medicine, pushing the scientific community to develop principles of epidemiology, prevention, immunization, and antimicrobial treatments. The recent pandemic of COVID-19 has been a wake-up call for not only the public health realm but also for working towards strategies for mitigating pandemics, which is now a top global public health priority.

¹ SRS BASED ABRIDGED LIFE TABLES 2013-17A life table states the probabilities of survival of a hypothetical group or cohort at different ages, which gradually diminish due to deaths. It is a conventional method of expressing the most fundamental and essential facts about the age distribution of mortality and is a powerful tool for measuring the probability of life and death of various age groups. It enables us to understand the implication of age-specific mortality rate in terms of average life expectancy.

² The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance of a State / Union Territory in registration of births and deaths. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration.

CHAPTER ONE

DEMOGRAPHIC INDICATORS

**An Overview of Population
Statistics and Vital Statistics
of the country**

DEMOGRAPHIC INDICATORS

Index

1.1. Population Statistics (Population estimates and Population Projections)

Table No.	Table Name	Source of Table	Page No.
1.1.1 (a)	Trend in Census Population in India 1901 - 2011	Census of India O/o Registrar General of India	8
1.1.1 (b)	India Projected Total Population, Sex Ratio and Density as on 1 st March - 2011-36 ('000)	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	10
1.1.1 (c)	Projected Population Characteristics as on 1 st March: 2011 – 2036	Report of the Technical Group on Population Projections, November 2019, National Commission on Population	11
1.1.2 (a)	State/UT wise Distribution of Population, Sex Ratio, Density and Decadal Growth rate of Population: 2011	Census of India O/o Registrar General of India	12
1.1.2 (b)	Projected values of sex ratio at birth, India and Major States (excluding Goa): 2011-2035	Report of the Technical Group on Population Projections, November 2019, National Commission on Population	16
1.1.3 (a)	State/ UT wise distribution of Projected Population of India, 2011 - 2036	Report of the Technical Group on Population Projections, November 2019, National Commission on Population	17
1.1.4 (a)	Percentage distribution of estimated Total Population by age-group and sex 2015- 2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	26
1.1.4 (b)	Percentage distribution of estimated Rural Population by age-group and sex, 2015-2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	28
1.1.4 (c)	Percentage distribution of estimated urban population by age-group and sex, 2015-2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	28
1.1.4 (d)	Percentage Distribution of Projected Population by Age and Sex as on 01 st March: 2011-2036	Report of the Technical Group on Population Projections, November 2019, National Commission on Population	30
1.1.5 (a)	Percentage distribution of Total Population in the age group of 60 years and above by sex in India and bigger States, 2015-2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	33
1.1.5 (b)	Percentage distribution of Rural Population in the age group of 60 years and above by sex, India and bigger States, 2015-2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	34
1.1.5 (c)	Percentage distribution of Urban Population in the age group of 60 years and above by sex in India and bigger States, 2015-2018	Source: SRS Statistical Report 2018, O/o Registrar General of India	35
1.1.5 (d)	Projected Population Characteristics As on 1 st March: 2011 - 2036, India and Major States; Population by broad age-group (60+)	Report of the Technical Group on Population Projections, November 2019, National Commission on Population	36
1.1.6	State/UT wise distribution of Districts, Sub-Districts, Towns and Villages in India, 2011	Source: Census of India, 2011	38

1.2. Vital Statistics (Vital Statistics and Projections)

1.2.1. Indirect methods [Sample Registration Survey (SRS) and Cause of Death Statistics]

Table No.	Table Name	Source of Table	Page No.
1.2.1.1 (a)	Estimated Birth Rate, Death Rate and Natural Growth Rate in India, 1991- 2018	SRS Bulletin – 2020	39
1.2.1.1 (b)	Projected Population Growth Rate of India and States (2011-2035)	Report of the Technical Group on Population Projections, November 2019 National Commission on Population,	40
1.2.1.2	State/UT wise distribution of Birth Rates in India 2015, 2016, 2017 and 2018	SRS Bulletin – 2020	42
1.2.1.3	Projected Crude Birth Rates in India and Major States, 2011-2035	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	43
1.2.1.4	Projected Crude Death Rates in India and Major States ,2011-2035	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	44
1.2.1.5 (a)	State/UT wise distribution of Death Rate by sex, 2015-2018	SRS Bulletin -May, 2020, Vol. 53, No.1	46
1.2.1.5 (b)	State/UT wise distribution of Death Rate in Rural Areas by sex, 2015-2018	SRS Bulletin -May, 2020, Vol. 53, No.1	47
1.2.1.5 (c)	State/UT wise distribution of Death Rate in Urban Areas by sex, 2015-2018	SRS Bulletin -May, 2020, Vol. 53, No.1	48
1.2.1.6 (a)	Expectation of life at birth by sex and residence, India*, 1970-75 to 2013-17	SRS based Abridge Life Tables, O/o Registrar General of India	49
1.2.1.6 (b)	Projected Levels of Expectation of Life at Birth in India and Major States, 2011 – 2035	SRS Bulletin- May 2020	52
1.2.1.7	Infant Mortality Rates in India ,1994- 2018	SRS Bulletin- May 2020	54
1.2.1.8 (a)	State/UT wise Infant Mortality Rates by Sex in India, 2015-2018	SRS Bulletin- May 2020	55
1.2.1.8 (b)	State/UT wise Infant Mortality Rates by Sex in Rural Areas of India, 2015-2018	SRS Bulletin- May 2020	56
1.2.1.8 (c)	State/UT wise Infant Mortality Rates by Sex in Urban Areas of India, 2015-2018	SRS Bulletin-May 2020	57
1.2.1.9 (a)	Maternal Mortality Ratio (MMR) in India & Major States 2010-12, 2011-13, 2014-16 & 2016-18	Special Bulletin on Maternal Mortality in India 2016-18	60
1.2.1.9 (b)	Maternal Mortality Ratio (MMR), Maternal Mortality Rate and Life Time Risk; India, EAG & Assam, South and Other states, 2016-18	Special Bulletin on Maternal Mortality in India 2016-18	61
1.2.1.9 (c)	Age Distribution of Maternal and Non-Maternal deaths, India, 2016-18	Special Bulletin on Maternal Mortality in India 2016-18	62
1.2.1.10 (a)	Mortality Indicators in India, 2001-2018	SRS Bulletin, SRS Statistical Report	63

Table No.	Table Name	Source of Table	Page No.
1.2.1.10 (b)	Demographic Indicators: 2011-2035 For India and State wise: Infant Mortality Rate (IMR) and Under-5 mortality rate (q5)	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	65
1.2.1.11 (a)	Age Specific Death Rate by Sex in India, 2015-2018	SRS Statistical Report, 2017 & 2018 Registrar General of India	67
1.2.1.11(b)	Age Specific Death Rate by Sex in Rural Areas of India, 2015-2018	SRS Statistical Report, 2017 & 2018 Registrar General of India	68
1.2.1.11 (c)	Age Specific Death Rate by Sex in Urban Areas of India, 2015-2018	SRS Statistical Report, 2017 & 2018 Registrar General of India	69
1.2.1.12 (a)	Total Fertility Rate (TFR) by Residence in India and Major States, 2015 - 2018	SRS Statistical Report, 2017 & 2018 Registrar General of India	70
1.2.1.12 (b)	Projected levels of Total Fertility Rates (TFR) for India and Major States: 2011-2035	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	71
1.2.1.13	Projected values of net-migration rate (per 100), India and Major States: 2011-2035	Report of the Technical Group on Population Projections, November 2019, National Commission on Population,	72
1.2.14 (a)	Distribution of Deaths in Rural and Urban Areas by age and gender in India :2010-2013	Causes of Death Statistics 2010-2013, Office of the Registrar General & Census Commissioner, India Ministry of Home Affairs, Government of India	73
1.2.14 (b)	Top Ten Causes of Death	Causes of Death Statistics 2010-2013, Office of the Registrar General & Census Commissioner, India Ministry of Home Affairs, Government of India	74
1.2.14 (c)	Top Ten Causes of Death (%) Age Group in India 2010 -2013	Causes of Death Statistics 2010-2013, Office of the Registrar General & Census Commissioner, India Ministry of Home Affairs, Government of India	75

1.2.2. Direct Methods [Civil Registration System (CRS) and Medical Certification of Cause of Death (MCCD)]

Table no.	Table name	Source of table	Page No.
1.2.2.1	Demographic features of India as per the civil registration system (CRS)	Vital Statistics of India based on the Civil Registration System 2018	77
1.2.2.2 (a)	Number of births registered by sex and residence, 2018	Vital Statistics of India based on the Civil Registration System 2018	78
1.2.2.2 (b)	Number of deaths registered by sex and residence, 2018	Vital Statistics of India based on the Civil Registration System 2018	79
1.2.2.2 (c)	Number of infant deaths registered by sex and residence, 2018	Vital Statistics of India based on the Civil Registration System 2018	80
1.2.2.2 (d)	Number of still births registered by sex and residence, 2018	Vital Statistics of India based on the Civil Registration System 2018	81
1.2.2.3.(a)	Growth in medical certification as a part of total registered deaths	Report on Medical Certification of Cause of Death 2018 O/o Registrar General of India	82
1.2.2.3 (b)	Percentage distribution of leading cause groups of deaths during 2000-2018	Report on Medical Certification of Cause of Death 2018 O/o Registrar General of India	83
1.2.2.3 (c)	State/ut-wise distribution of medically certified deaths by 8 leading cause- groups – 2018	Report on Medical Certification of Cause of Death 2018 O/o Registrar General of India	84

DEMOGRAPHIC INDICATORS

Highlights

Demographic indicators for India reveal population size, composition, geographic distribution and growth in a given geographical distribution. It also reveals their relationship with social, economic and behavioral factors. Population size refers to quantity of population and can be enumerated by census. The composition deals with quality aspects of populations like age, sex, literacy level, occupation, income, marital status, language spoken, and religion. Population growth reveals growth of population over a decade and depends upon fertility, mortality pattern and migration of population. Distribution gives geographical distribution of population in a given country or given area. Demographic Indicators can be divided into two parts: Population Statistics and Vital Statistics. Population Statistics shows trend of population size and growth, sex ratio and population density while Vital Statistics shows trends of birth rate, death rate, life expectancy at birth (LEO), natural growth rate and mortality and fertility rates.

State/UT wise performance of these indicators help us in identifying areas that need policy and programme interventions; setting near and far-term goals; and deciding priorities, besides understanding them in an integrated structure.

Population estimates and Projections

- India's population, as per census 2011 stood at 12108.5 lakhs (6232.7 lakhs males and 5875.8 lakhs females). Out of the entire census till date, the Average Annual Exponential Growth Rate has been negative only for the decade 1911-21.
 - o The population of India is expected to increase from 121.1 crores to 151.8 crores during the period 2011-2036 - an increase of 25 percent in twenty-five years at the rate of 1.0 percent annually. As a consequence, the density of population will increase from 368 to 462 persons per square kilometer.
- The sex ratio has further improved from 1991 it was 933 and 943 females against 1000 males in 2001 and 2011 respectively in the country.
 - o The sex ratio of the total population (females per 1000 males) is expected to increase (i.e. become more feminine) from 943 in 2011 to 957 during 2036.
 - o The projected Sex Ratio at Birth is expected to increase from 906 in 2011 (SRS) to 909 in 2031 (females per 1000 males).
- The proportion of population in the working age-group 15-59 years is expected to rise from 60.7 percent in 2011 to 65.1 percent in 2036.
- In 2011, 50.1 percent of the population in the country, was aged 24 years and below, constituting 30.8 percent and 19.3 percent in the ages 0-14 years and 15-24 years respectively. The combined proportion of these two age-groups is expected to fall from 50.1 percent in 2011 to 34.7 percent in 2036 (19.8 percent in the ages 0-14 years and 14.9 percent in the ages 15-24 years). The average age of Indians is expected to be of 34.7 years in 2036 as compared to 24.9 years in 2011.
- Out of the total population increase of 30.7 crores between 2011 and 2036, the share of the workers in the age-group 15-59 years in this total increase is 82.5 percent.

Vital Statistics (Vital Statistics and Projections)

- The crude birth rate will decline from 19.6 during 2011-15 to 13.0 during 2031-35 because of falling level of total fertility. In contrast, the crude death rate is expected to increase marginally due to changing age structure of the population with the rising median age as a result of continuing decline in fertility and increase in the expectation of life at birth. It will increase from 6.9 during 2011-15 to 7.3 during 2031-35.
- The SRS abridged tables 2013-17¹; which gives the Life Expectancy of Life at Birth show it has increased from 49.7 years in 1970-75 to 69.0 years in 2013-17. For the same period, the Life Expectancy for Females is 70.4 years and 67.8 years for Males.
- IMR for the country has come down to 32 in 2018 from 40 in 2013, a decline of 8 points over last 5 years and an annual average decline of about 1.6 points.
- Total Fertility Rate (TFR) for the country is stable at 2.2 in 2018 and 2017. During 2018, Bihar has reported the highest TFR (3.2) while Delhi and West Bengal have reported the lowest TFR.
- The level of registration² of births is 89.3% in 2018. 13 States/UTs have achieved the cent per cent level of registration of births. 13 out of 20 major States have crossed 90% level of registration of births.
- The number of registered births has increased to 2.33 Crores in 2018. Out of the total registered births, the share of male and female are 52.0% and 47.9% respectively.

¹ SRS BASED ABRIDGED LIFE TABLES 2013-17A life table states the probabilities of survival of a hypothetical group or cohort at different ages, which gradually diminish due to deaths. It is a conventional method of expressing the most fundamental and essential facts about the age distribution of mortality and is a powerful tool for measuring the probability of life and death of various age groups. It enables us to understand the implication of age-specific mortality rate in terms of average life expectancy.

² The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance of a State / Union Territory in registration of births and deaths. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration.

1.1 Population Statistics (Population estimates and Population Projections)

1.1.1 (a) : Trend in Census Population in India 1901 – 2011

S. No.	Year	Total Population (In Lakh)			Sex Ratio	Population Density	Decadal Growth Rate (%) ^g	Average Annual Exponential Growth Rate	% of Urban Population to Total Population
		Male	Female	Total

Source: O/o Registrar General of India

Notes:

- The distribution of population by sex of Puducherry for 1901 (2,46,354), 1931 (2,58,628) & 1941 (2,85,011) is not available. The figures of these years are therefore, exclusive of these population figures so far as distribution by sex is concerned.
- Sex wise Distribution of Chandan Nagar (26831) of West Bengal and Gonda (18810) of Uttar Pradesh are not available.
- Includes interpolated population of Assam where the 1981 census could not be conducted owing to disturbed conditions prevailing in that state during that period.
- Includes Interpolated population of Jammu & Kashmir based on final population of 2001 census, where the 1991 census could not be held.
- India figures for 2001 includes estimated population of the three sub - divisions Viz. Mao Maram, Paomata and Purul of Senapati district of Manipur.
- Excludes Puducherry
- In working out 'decadal growth' and 'percentage decadal growth' for India 1941 - 51 and 1951 - 61 the population of Tuensang district for 1951 (7,025) and the population of Tuensang (83,501) and Mon (5,774) districts for 1961 census of Nagaland state have not been taken into account as the
- areas were censused for the first time in 1951 Census and the same are not comparable.
- For calculating density, the area figure for India exclude 78,114 sq. Km. under illegal occupation of Pakistan and 5180 sq. Km. illegally handed over by Pakistan to China and 37555 sq. Km. under illegal occupation of China in Ladakh district and 1573 sq. Km. of three sub - division of Senapati district of Manipur.
- The data pertaining to three sub-divisions Viz. Mao Maram, Paomata and Purul of Senapati district of Manipur were finalized after release of PCA of Census 2011 and accordingly the figures for India has been revised.
- NA** - Not Available

India's population, as per census 2011 stood at 12108.5 lakhs (6232.7 lakhs males and 5875.8 lakhs females). Out of the entire census till date, the Average Annual Exponential Growth Rate has been negative only for the decade 1911-21. During this interval, population declined marginally due to great influenza epidemic and two successive bad harvests in West Bengal. [Table No. 1.1.1(a)]

Source: Table 1.1.1(a)

The sex ratio of India during 1901 was 972 females per 1000 males. Since then, it has continued to decline decade after decade to 926 females against 1000 males in 1991 (except in 1981). The sex ratio has further improved from 1991 it was 933 and 943 females against 1000 males in 2001 and 2011 respectively in the country as per the information available at Table No. 1.1.1 (a) and graphic presentation given at Figure No. 1.1.

The sex ratio of the total population (females per 1000 males) is expected to increase (i.e. become more feminine) from 943 in 2011 to 957 during 2036. [Refer Table 1.1.1(b)]

Source: Table 1.1.1(a)

An important trend is urbanization of India with 31.14 % of the Indian population living in Urban areas in 2011 as compared to 10.85 % in 1901. [Table 1.1.1(a)]

Note: NA - Not Available

Source: Table 1.1.1(b)

The population of India is expected to increase from 121.1 crores to 151.8 crores during the period 2011-2036 - an increase of 25 percent in twenty- five years at the rate of 1.0 percent annually. As a consequence, the density of population will increase from 368 to 462 persons per square kilometer. [Refer Table 1.1.1(b)]

1.1.1 (c) : Projected Population Characteristics as on 1st March: 2011 – 2036 India

Indicator	2011	2016	2021	2026	2031	2036
Population (000')						
Total	12,10,855	12,90,235	13,61,343	14,23,435	14,75,519	15,18,288

Total (Young and old)	646	590	553	538	533	536

Source: National Commission on Population, Ministry of Health and Family Welfare; Report of the Technical Group on Population Projections, November 2019

The proportion of population in the working age-group 15-59 years is expected to rise from 60.7 percent in 2011 to 65.1 percent in 2036. [Refer Table 1.1.1(c)]

In 2011, 50.1 percent of the population in the country, was aged 24 years and below, constituting 30.8 percent and 19.3 percent in the ages 0-14 years and 15-24 years respectively. The combined proportion of these two age-groups is expected to fall from 50.1 percent in 2011 to 34.7 percent in 2036 (19.8 percent in the ages 0-14 years and 14.9 percent in the ages 15-24 years). The average age of Indians is expected to be of 34.7 years in 2036 as compared to 24.9 years in 2011. [Refer Table 1.1.1(c)].

Out of the total population increase of 30.7 crores between 2011 and 2036, the share of the workers in the age-group 15-59 years in this total increase is 82.5 percent. This has implication in the availability of labour in future. [Refer Table 1.1.1(c)]

1.1.2 (a) : State/UT wise Distribution of Population, Sex Ratio, Density and Decadal Growth rate of Population: 2011

Source: O/o Registrar General of India

Notes:

1. The data pertaining to three sub-divisions Viz. Mao Maram, Paomata and Purul of Senapati district of Manipur were finalized after release of PCA of Census 2011 and accordingly the figures for India and State of Manipur have been revised.
2. For working out density of India and the State of Jammu & Kashmir, the entire area and population of those portions of Jammu & Kashmir which are under illegal occupation of Pakistan and China have not been taken into account.
3. For Census 2011, the population of "Others" has been clubbed with the "Males" for working out population, 0-6 population, literates and relates rates and ratios.
4. In working out 'decadal variation' and percentage decal variation' for 1941-1951 & 1951-1961 of India and Nagaland State, the population of Tuensang District for 1951(7,025) & the population of Tuensang (83,501) & Mon (50,774) districts for 1961 Census have not been taken into account as the area was censused for the first time in 1951 and the same are not comparable.
5. The 1981 Census could not be held owing to disturbed conditions prevailing in Assam. Hence the population figures for 1981 of Assam have been worked out by 'Interpolation'.
6. The 1991 Census was not held in Jammu & Kashmir. Hence the population figures for 1991 of Jammu & Kashmir have been worked out by 'Interpolation'.
7. The distribution of population of Pondicherry (Puducherry) by sex for 1901 (246,354), and 1931 (258,628) and 1941 (285,011) is not available. The figures of India for these years are, therefore, exclusive of these population figures so far as distribution by sex is concerned.
8. Arunachal Pradesh was censused for the first time in 1961.
9. In 1951, Tuensang was censused for the first time in 129.5 sq.kms of areas only. In 1961 censused areas of Tuensang District of Nagaland was increased to 5356.1 sq.kms.
10. Due to non-availability of census data the figures for the decades, from 1901 to 1951 have been estimated for the districts of Kohima, Phek, Wokha, Zunheboto and Mokokchung of Nagaland. Estimation however could not be done for Tuensang and Mon as they were not fully censused prior to 1961.
11. As the sex break-up for the districts Sheopur, Morena, Bhind, Gwalior, Datia, Shivpuri, Guna, Ratlam, Ujjain, Shajapur, Dewas, Jhabua, Dhar, Indore, West Nimar (Khargone), Barwani, Raigarh, Bhopal, Sehore and Raisen is not available for the year 1901. Figures for males and females have been estimated for the year 1901 for Madhya Pradesh.
12. One village Ramtapur (code No. 217 and 101 in 1951 and 1961 respectively) of Jukkal circle of Degulur taluka which was transferred under the state Reorganisation Act, 1956 from Maharashtra to Andhra Pradesh, till continues in Nanded district of Maharashtra. The population of this village has, however, been adjusted in Nizamabad district for the year 1901-1951.
13. The names of Uttaranchal and Pondicherry have changed to Uttarakhand and Puducherry respectively after Census 2011.

FIGURE 1.4 STATE- WIDE INCLUDING INDIA SEX RATION IN 2011

Source: Table 1.1.2 (a)

The highest sex ratio of 1084 females per 1000 males was reported by State of Kerala followed by Puducherry (1037/1000), Tamil Nadu (996/1000), Andhra Pradesh (993/1000), Chhattisgarh (991/1000) and Meghalaya (989/1000). The lowest sex ratio of 618 females per 1000 males was reported by the UT of Daman & Diu followed by Dadar and Nagar Haveli (774/ 1000), Chandigarh (818/1000), NCT of Delhi (868/1000), Andaman & Nicobar Islands (876/1000), Haryana (879/1000), Jammu & Kashmir (889/1000), Sikkim (890/1000) and Punjab (895/1000). [Refer Table No. 1.1.2 (a)]

Source: Table 1.1.2 (a)

The graphic representation of the population density of the country is given in Figure No. 1.2 The highest population density of 11320 populations per square kilometer was reported by NCT of Delhi whereas Arunachal Pradesh has reported the lowest population density of 17. [Refer Table No. 1.1.2]

Source: Table 1.1.2 (a)

There is continuous decline in the decadal growth rate from 1961-71 onwards. [Refer Table 1.1.1(a) and Figure 1.6]. The Nagaland is only state with negative decadal growth rate of – 0.6 and Dadra & Nagar Haveli has the highest decadal growth rate of 55.9 followed by Daman Diu of 53.8. [Refer Table 1.1.2 (a)]

1.1.2 (b) : Projected values of sex ratio at birth, India and Major States (excluding Goa): 2011-2035

S. No	India/State	2009-11 SRS	2016	2021	2026	2031-35

Source: National Commission on Population, Ministry of Health and Family Welfare; Report of the Technical Group on Population Projections, November 2019

Source: Table 1.1.1 (b) and Table 1.1.2 (b)

The sex ratio of the total population (females per 1000 males) is expected to increase (i.e. become more feminine) from 943 in 2011 to 957 during 2036. [Refer Table 1.1.1(b)]

The projected Sex Ratio at Birth is expected to increase from 906 in 2011 (SRS) to 909 in 2031 (females per 1000 males). [Refer Table New 1.1.2(b)]

Sex Ratio at Birth for the country has gone up by 3 points to 899 in 2016-18 from 896 in 2015-2017. Chhattisgarh has reported the highest Sex Ratio at Birth 961 while Haryana the lowest 833.

Source: SRS Statistical Report 2018, O/o Registrar General of India

Source: Table 1.1.4 (a)

The percentage distribution of population for 0-14 years in 2018 was 26.5%, 15-24 years was 21.0 %, 25-59 years was 44.5 % and for 60+ years was 8.3 %. [Table 1.1.4 (a)].

The ageing population has more female.

Source: Table 1.1.4 (d)

Source: Table 1.1.4 (d)

Changes in the age structure of the projected population at the national level between 2011 and 2036 have been depicted by population pyramids. It is observed from the said population pyramids that in 2011, older cohorts would be smaller than younger cohorts. Subsequently, with the decline in fertility, the base of the pyramid in 2036 would narrow down, while the middle would get broadened. [Refer Fig 1.11 and Fig 1.12]

Figure 1.14 Projected Population Characteristics (Proportion of 60+ and Median Age

Source: Table 1.1.5(d)

- Between 2011 and 2036, because of the declining fertility, the proportion of population aged under 15 years is projected to decline from 30.8 to 19.8 percent; the proportion of the middle age-group (15- 59 years) and the older ages (60 years and above) are set to increase considerably. With the declining fertility, along-with the increases in life expectancy, the number of older persons in the population is expected to increase by more than double from 10 crores in 2011 to 23 crores in 2036 - an increase in their share to the total population from 8.4 to 15.0 percent [Refer Table 1.1.5 (d)].
- The median age of the population will shift from 24.9 years in 2011 to 34.7 years in 2036. [Table 1.1.5 (d)]

7. SRS Bulletin – 2020

Note: * Rate per 1000 Mid Year Population

Source: Table 1.2.1.1. (a)

The estimated Birth Rate, Death Rate and Natural Growth Rate in India during 1991 to 2018 are given in Table No. 1.2.1.1 There has been consistent decrease in the Birth Rate, Death Rate and Natural Growth Rate in India since 1991 to 2018. As on 2018 India has registered Birth Rate of 20.0 per 1000 populations and Death Rate of 6.2 per 1000 populations while the Natural Growth Rate was 13.8 per 1000 population in India. The Birth Rate in Rural was higher than in the Urban. Similarly, the Death Rate and Natural Growth Rate were also higher in rural as compared to the Urban. [Refer Table No 1.2.1.1 (a)]

The population, however, continues to grow, as the decline in the birth rate is not as rapid as the decline in the death rate.

1.2.1.1 (b) : Projected Population Growth Rate of India and States (2011-2035)

Figure 1.18: Projected Crude Birth and Death Rate (India and States), 2011-2035

Source: Table 1.2.1.3 and Table 1.2.1.4

The crude birth rate will decline from 19.6 during 2011-15 to 13.0 during 2031-35 because of falling level of total fertility. In contrast, the crude death rate is expected to increase marginally due to changing age structure of the population with the rising median age as a result of continuing decline in fertility and increase in the expectation of life at birth. It will increase from 6.9 during 2011-15 to 7.3 during 2031-35. [Refer Table 1.2.1.4]

Figure 1.19: Distribution of Death Rate in India by sex, 2015-18

Figure 1.20: Distribution of Death Rate in Rural vs Urban, 2015-18

Source: Table 1.2.1.5 (a), (b), (c)

- The distribution of death rate is higher in rural areas and in males. [Refer Table 1.2.1.5 (a), (b), (c)]

Source: Table 1.2.1.6 (a)

- The SRS abridged tables 2013-17³; which gives the Life Expectancy of Life at Birth show it has increased from 49.7 years in 1970-75 to 69.0 years in 2013-17. For the same period, the Life Expectancy for Females is 70.4 years and 67.8 years for Males. [Table No. 1.2.1.6 (a)]

³ SRS BASED ABRIDGED LIFE TABLES 2013-17A life table states the probabilities of survival of a hypothetical group or cohort at different ages, which gradually diminish due to deaths. It is a conventional method of expressing the most fundamental and essential facts about the age distribution of mortality and is a powerful tool for measuring the probability of life and death of various age groups. It enables us to understand the implication of age-specific mortality rate in terms of average life expectancy.

3. NA- Not Available

Source: Table 1.2.1.8(c)

The Infant Mortality Rate (IMR) has also registered 1-point decline to 32 in 2018 from 33 in 2017 at the National level. The maximum IMR has been observed in Madhya Pradesh (48) and the minimum in Kerala (7).

Source: Table 1.2.1.8(c)

Figure 1.25 : Infant Mortality Rates by Sex in Rural vs Urban, 2015 - 2018

Source: Table 1.2.1.8(b)

IMR for the country has come down to 32 in 2018 from 40 in 2013, a decline of 8 points over last 5 years and an annual average decline of about 1.6 points. The corresponding decline in rural IMR has been to the tune of 8 points (44 in 2013 to 36 in 2018) against a decline of 4 points in urban IMR (27 in 2013 to 23 in 2018). Both genders have shown decline in the period 2013-18. [Refer Table 1.2.1.7]

Source: SRS Statistical Report, 2017 & 2018 Registrar General of India

Notes: Rounded off to one decimal point.

- Total Fertility Rate (TFR) for the country is stable at 2.2 in 2018 and 2017. During 2018, Bihar has reported the highest TFR (3.2) while Delhi and West Bengal have reported the lowest TFR (1.5). It is noteworthy that the replacement level TFR, viz. 2.1, has been attained by Delhi (1.5), West Bengal (1.5), Tamil Nadu (1.6), Andhra Pradesh (1.6), Jammu & Kashmir (1.6), Punjab (1.6), Himachal Pradesh (1.6), Telangana (1.6), Maharashtra (1.7), Kerala (1.7), Karnataka (1.7), Uttarakhand (1.8), Odisha (1.9) and Gujarat (2.1).
- At present, a rural woman (having a TFR of 2.4) at the National level would have about one child more than an urban woman (having a TFR of 1.7), on an average. [Table No. 1.2.1.12 (a)]

Note: Includes Sentity

Cause of Death in India 2010-2013 [Refer Table 1.2.1.14 (a), (b), (c)]

In view of the limitations of Medical Certification of Cause of Death (MCCD) with regards to its restriction leading to current overall coverage of about 20 percent of the total registered deaths, a special survey of all deaths using Verbal Autopsy tool for period of 2010-13 gives following vital information.

Source: Table 1.2.1.14(c)

- **Figure 1.33** - Top ten causes of death account for almost 80% of deaths.
- Non communicable diseases continue to increase in proportion (49.2 in 2010-13, 45.4 in 2004-06 and 42.4% in 2001-03).
- Communicable, Maternal, Perinatal & Nutritional Conditions are showing an even sharper decline as cause of deaths (27.7% in 2010-13, 36.7% in 2004-06 and 38.2% in 2001-03).
- Overall cardiovascular diseases remain the most dominant cause of deaths in the population and is causing 23.3% of deaths compared to 19.9% in 2004-06.
- Communicable, maternal, Perinatal & Nutritional Conditions causes higher proportion of death in female than male (30.4% against 25.7%).
- Injuries causes more deaths in male compared to female (12.4% against 8.4%)
- The share of symptoms, signs & ill-defined Conditions also registered increase in its share of total deaths to the tune of 4.8% (12.8 from 7.6 % in 2004-06).
- The share of deaths due to injuries increased marginally by 0.3% over the period.

1.2.2. Direct Methods

VITAL STATISTICS OF India BASED ON THE CIVIL REGISTRATION SYSTEM 2018

1.2.2.1 Demographic features of India as per the Civil Registration System (CRS)

Registration of Births		2017	2018
i)	Estimated Mid- Year Population (in '000)	12,88,522	13,02,896
ii)	Estimated Live Births	2,60,28,144	2,60,57,920
iii)	Number of Registered Births	2,21,04,418	2,32,69,383
iv)	Level of Registration	84.9	89.3
Registration of Deaths			
i)	Estimated Deaths	81,17,689	80,77,955
ii)	Number of Registered Deaths	64,63,779	69,50,607
iii)	Level of Registration	79.6	86.0
Registration of Infant Deaths			
i)	Number of Registered Infant Deaths	1,65,494	1,74,146
ii)	Percentage of infant death to total deaths	2.6	2.5
Gross Natural Addition to Population			
i)	Person	1,56,40,639	1,63,18,776

Source: Vital statistics of India based on the civil registration system 2018

VITAL STATISTICS OF India BASED ON THE CIVIL REGISTRATION SYSTEM 2018

In order to unify the Civil Registration activities, the Registration of Births & Deaths Act, 1969 was enacted. The Annual Report on Vital Statistics of India based on Civil Registration System for 2018 has been brought out on the basis of reports provided by the Chief Registrar of Births and Deaths of respective States/Union Territories. The main features of the Annual Report are summarized below:

- The level of registration of births is 89.3% in 2018. 13 States/UTs have achieved the cent per cent level of registration of births. 13 out of 20 major States have crossed 90% level of registration of births. [Refer Table 1.2.2.1, & Table 1.2.2.2 (a)]
- The number of registered births has increased to 2.33 Crores in 2018. Out of the total registered births, the share of male and female are 52.0% and 47.9% respectively [Refer Table 1.2.2.1, & Table 1.2.2.2 (a)]
- The number of registered deaths were 69.5 lakhs in 2018, which is 86% of total estimated deaths. [Refer Table 1.2.2.1, & Table 1.2.2.2 (b)]
- The number of registered infant deaths were 1.7 lakh and still births were 1.6 lakh [Refer Table 1.2.2.2 © & Table 1.2.2.2 (d)]
- Though the level of registration for births has recorded consistent improvement over the years, gap of about 10.7% in case of registration of births and about 14.0% for registration of deaths at all India level remains a cause of concern. It is also pertinent to mention here that the gap between Levels of Birth and Death Registration is narrowing down.

⁴The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance of a State / Union Territory in registration of births and deaths. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration.

1.2.2.2 (a) : Number of Births Registered by Sex and Residence, 2018

Source: REPORT ON MEDICAL CERTIFICATION OF CAUSE OF DEATH 2018 O/o Registrar General of India

Medical Certification of Cause of Death (MCCD) was introduced in the country under the provisions of Registration of Births and Deaths (RBD) Act, 1969. Since then, it has been operational in the country, but with varying levels of efficiency across the States/Union Territories.

Scope of the report: The report on MCCD-2018, is based upon 14,56,023 total medically certified deaths (Male: 9,00,075 and Female: 5,55,948) accounting for 21.1 per cent of total registered deaths in respect of 35 States/UTs who supplied data for the report. Despite different levels of efficiency and limitations it may be sufficient to throw some valuable insights into deaths by various cause groups and their gravity.

Fig 1.35. Time Series on Medically Certified Deaths vis-a-vis Total Registered Deaths Reported for the Period 2000 - 2018

Source: Table 1.2.2.3(a)

- Following are eight leading cause-groups of deaths constituting around 86.5 per cent of total medically certified cause of deaths:
 - Diseases of Circulatory System (32.9 per cent)
 - Diseases of Respiratory System (9.4 per cent)
 - Certain Infectious and Parasitic Diseases (9.4 per cent)
 - Certain Conditions Originating in the Perinatal Period 5.9 per cent)
 - Neoplasm (5.7 per cent)
 - Endocrine, Nutritional and Metabolic Diseases (5.6 per cent)
 - Injury, Poisoning and Certain Other Consequences of External Causes (4.5 per cent)
 - Symptoms Signs & Abnormal Clinical Findings "Not Elsewhere Classified" (13.1 per cent)

CHAPTER TWO

SOCIO-ECONOMIC INDICATORS

**An Overview of Socio-Economic
Characteristics like Education,
Gender, Poverty & Employment**

SOCIO-ECONOMIC INDICATORS

2.1 Education

Table No.	Table Name	Source of Table	Page No.
2.1.1	State / UT wise Literacy Rate in India as per Census, 2011	Census of India	93
2.1.2	State/UTs wise Gross Enrolment Ratio in India 2017-18	UDISE - (Provisional)	95

2.2 Social Indicators

Table No.	Table Name	Source of Table	Page No.
2.2.1 (a)	State/UT wise Mean Age at Effective Marriage of Females in India (bigger States); 2015- 2018	SRS Statistical Reports, Registrar General of India	97
2.2.1 (b)	State/UT wise Mean Age at Effective Marriage of Females in Rural Areas of India (bigger States) 2015-2018	SRS Statistical Reports, Registrar General of India	98
2.2.1 (c)	State/UT wise Mean Age at Effective Marriage of Females in Urban Areas of India (bigger States); 2015- 2018	SRS Statistical Reports, Registrar General of India	99
2.2.2	State/UT wise Number and Percentage of Population below the poverty line by States 2011-12	National Institution for Transforming India Aayog	100

2.3 Economic Indicators

Table No.	Table Name	Source of Table	Page No.
2.3.1	State/UT wise Per Capita Net State Domestic Product at Current Prices Base year 2013-14 as on 31 st July 2020	Directorate of Economics & Statistics of respective State Governments	102
2.3.2	Gross National Income, Net National Income, Per Capita Income in India from 2011-12 to 2018-19	National Accounts Division, Central Statistics Office, Ministry of Statistics & PI	103
2.3.3	Per Capita Per Day Net Availability of Cereals and Pulses in India 2001-2018	Directorate of Economics & Statistics, Department of Agriculture & Cooperation, Ministry of Agriculture	104

2.4 Employment

Table No.	Table Name	Source of Table	Page No.
2.4.1	State/UT wise Employment in the Organised Sector in India	Annual Employment Review - 2012, DGE&T, Ministry of Labour & Employment	106

2.5 Housing and Amenities

Table No.	Table Name	Source of Table	Page No.
2.5.1	State/UT wise Distribution of Households by Predominant Material of Roof in India as per Census 2011	Census of India,	108
2.5.2	State/UT wise Distribution of Households Having Safe Drinking Water Facilities in India as per Census 2011	Census of India,	110
2.5.3	State/UTs wise Coverage of Habitations under National Rural Drinking Water Programme in India as on 1 st April 2019 (as per IMIS)	IMIS, Ministry of Drinking Water & Sanitation	112

Table No.	Table Name	Source of Table	Page No.
2.5.4 (a)	State/District wise Fluoride affected rural habitations with excess fluoride which are yet to be provided safe drinking water (Online Integrated Management Information System of the Ministry of Drinking Water and Sanitation as on 1 st April 2019)	IMIS data of Ministry of Drinking Water & Sanitation	114
2.5.4 (b)	State / District wise Excess Presence of Arsenic in Water as per IMIS of Ministry of Drinking Water & Sanitation as on 1 st April 2019	IMIS data of Ministry of Drinking Water & Sanitation	120
2.5.4 (c)	States/ Districts under National Programme for Prevention and control of Fluorosis (NPPCF) up to 2020	National Programme for Prevention and Control of Fluorosis, Nutrition & IDD Cell, Directorate General of Health Services	123
2.5.5	State/UT wise Percentage distribution of Households by Availability of Toilet Connectivity within the House In India as per Census 2011	Census of India,	125
2.5.6	State/UTs wise Percentage Distribution of Households by Availability of type of Drainage As per Census 2011	Census of India,	127
2.5.7	State/UT wise distribution of Slum Households by the condition of census houses occupied by them as per Census 2011	Census of India,	129

SOCIO-ECONOMIC INDICATORS

Highlights

Socio-economic status plays an essential role in the overall health of a person, with evidence showing that socio-economically deprived sub-groups experience higher morbidity and mortality rates. The inter-relationship between health/ nutrition outcomes with socio-economic indicators is not always linear, and at times is complicated, poorly understood, and potentially fluctuating across cultures. Socio-economic comprises of multi-factorial “conditions” like environmental, material, and personal characteristics that interact elaborately. The “conditions” reinforce each other through self-perpetuating trickle down spirals, not just on an individual level and “social layer” level, but also at an intergenerational level. In this context, Chapter 2 provides the latest data of the socio-economic indicators, according to state and union territory, as these factors influence health/nutrition outcomes through complex pathways of change. The socio-economic factors included in this chapter are “literacy & school enrolment”; “age at effective marriage,”; “economic factors”; “per capita availability of cereals & pulses”; “employment rates,”; and household amenities.

Key Points

Education

- In 2011, India’s overall literacy rate was 73%, with urban areas reporting a 16% higher rate (84%) than rural (68%). Also, there is a 16% gender gap in the overall literacy rate, with males reporting a higher rate (81%) than females (65%). There also exists wide inter-state variations in overall literacy levels
- With a negligible gender gap, the gross enrolment ratio for both boys and girls in India in primary grades in 2017-18 was near-universal at 95% and 93%, respectively (Figure 2.2). However, by the time students reach higher secondary grades, the enrolment ratio drops to 57% and 56%, respectively. Only in 16 states/union territories, 60% or more girls are enrolled in higher secondary grades while enrolment was below 50% in 9 states, including populous states like Bihar, Odisha and Madhya Pradesh.

Social Indicators

- At the national level, the mean age at effective marriage of females remained almost constant at around 22 years from 2015 to 2018. The mean age at effective marriage of females in rural India during the same period has marginally improved from 21.6 years in 2015 to 21.8 years by 2018, while in urban areas, it has improved from 23.0 to 23.4 years.
- Poverty levels are higher in rural India (26%) than urban (14%). In 2011-12, more than 80% of India’s BPL population were in rural areas. Among the bigger states, Chhattisgarh (40%), Jharkhand (37%), Bihar (34%) have a high percentage of BPL population while Kerala (7%), Punjab (8%), Andhra Pradesh (9%) have a low percentage of BPL population.

Economic Indicators

- In 2019-20, among the populous states, per capita NDP was above INR 150,000 in Haryana, Karnataka, Tamil Nadu, and Telangana, while it was below INR of 50,000 in Bihar and Uttar Pradesh. In 2019-20, Delhi and Sikkim have the highest per capita NDP when Bihar and Uttar Pradesh have the lowest. From 2013 to 2020, the NDP growth rate was highest in Tripura.
- At constant prices during 2011-12 to 2018-19, India registered an annual growth in GDP of 8.6%, from 87 lakh crores to 140 lakh crores. From 2011-12 to 2018-19, at current prices, there is a steady increase in per capita national income.

Employment

- Out of the 7300-lakh adult population aged 15-59 years in 2011, 176 lakhs (2.4%) and 296 lakhs (4.1%) people are employed in public and private organized sectors, respectively. Around 40% of the working population of the country is concentrated in just four states of Maharashtra, Tamil Nadu, Karnataka, and Uttar Pradesh.

Housing and Amenities

- With huge interstate variations, 32% of Indian households in 2011 have access to safe drinking water as they get it through tap with a treated source and another 12% through the tap from an untreated source (Figure 2.6a). Around 34% get drinking water through handpump, 9% through tube well, and 9% through uncovered well.
- In 2019, 8443 habitations of 174 districts of 16 states were affected by the fluoride problem. In 2019, fluoride in drinking water was found in almost all the districts of Rajasthan, 4177 habitations being affected by this public health problem. West Bengal and Bihar are the other states mostly affected by this problem.
- In 2019, 15,673 habitats of 75 districts had excessive arsenic present in water.

Source: Census of India, 2011

Literacy is one of the essential determinants of health and nutritional status. India's literacy rate has been steadily increasing since its independence (Figure 2.1). In 2011, India's overall literacy rate was 73%, with urban areas reporting a 16% higher rate (84%) than rural (68%). Also, there is a 16% gender gap in the overall literacy rate, with males reporting a higher rate (81%) than females (65%). There also exists wide inter-state variations in overall literacy levels, with states like Kerala (94%) and Mizoram (91%) recording rates well above the national average while states like Bihar (62%) and Arunachal Pradesh (65%) reporting rates far below the national average (Table 2.1.1).

Source: UDISE - 2017-18 (Provisional)

Government of India initiatives like the Sarva Shiksha Abhiyan and the Right to Education Act - have made remarkable strides in attaining near-universal enrolment in primary schools. With a negligible gender gap, the gross enrolment ratio for both boys and girls in India in primary grades in 2017-18 was near-universal at 95% and 93%, respectively (Figure 2.2). However, by the time students reach higher secondary grades, the enrolment ratio drops to 57% and 56%, respectively. Between primary and upper primary grades, dropout among girls was nil when dropout among boys was 6%. Between upper primary and secondary, 15% of girls and 13% of boys have dropped out of school. Between secondary and higher-secondary grades, 23% of girls and 22% of boys have dropped out. Only in 16 states/union territories, 60% or more girls are enrolled in higher secondary grades while enrolment was below 50% in 9 states, including populous states like Bihar, Odisha, Madhya Pradesh, etc., (Table 2.1.2).

Age at marriage:

Age at marriage, particularly for girls, assumes significance, as early marriage may lead to disruption of studies, early pregnancy, maternal and newborn complications. Tables 2.2.1(a), 2.2.1(b), and 2.2.1(c) presents mean age at effective marriage for females by states for total, rural and urban areas, during 2015-18, by broad age groups. At the national level, the mean age at effective marriage of females remained almost constant at around 22 years from 2015 to 2018. Among bigger states, in 2018, the mean age marriage was lowest in West Bengal (20.9 years) and highest in Jammu & Kashmir (25.6). The mean age at effective marriage of females in rural India during the same period has marginally improved from 21.6 years in 2015 to 21.8 years by 2018, while in urban areas, it has improved from 23.0 to 23.4 years.

2.2.2: State/UT wise Number and Percentage of Population below poverty line by States 2011-12

(Tendulkar Methodology)

Notes:

- Poverty as on 1st March 2010 has been used for estimating number of persons below poverty line. (Interpolated between 2001 and 2011 population census)
- Poverty ratio of Tamil Nadu is used for Puducherry & Andaman Nicobar Islands
- Urban poverty ratio of Punjab is used for both rural and urban poverty of Chandigarh
- Poverty line of Maharashtra is used for Dadra & Nagar Haveli
- Poverty ratio of Goa is used for Daman & Diu
- Poverty ratio of Kerala is used for Lakshadweep

Poverty & GDP:

Population Below Poverty Line (BPL) is an important economic indicator reflecting households with economic disadvantages. In India, before 2005, this indicator was estimated based on food security. Later, the government adopted the Tendulkar methodology, which uses a basket of goods used by households and minimum expenditure per person necessary to survive. Using Tendulkar's methodology, in 2011-12, in India, a total of 2698 lakh people (22% of the population) fall below the poverty line (Figure 2.3). Poverty levels are higher in rural India (26%) than urban (14%). In 2011-12, more than 80% of India's BPL population were in rural areas. Among the bigger states, Chhattisgarh (40%), Jharkhand (37%), Bihar (34%) have a high percentage of BPL population while Kerala (7%), Punjab (8%), Andhra Pradesh (9%) have a low percentage of BPL population (**Table 2.2.2**).

Note: NA - Not Applicable

Per capita state Net Domestic Product (NDP) is the average value of all goods and services produced per person in a state at a given time. The NDP is a measure of economic output. It is calculated by subtracting capital depreciation from the Gross Domestic Product (GDP), which is the final value of the goods and services produced. In 2019-20, among the populous states, per capita NDP was above INR 150,000 in Haryana, Karnataka, Tamil Nadu, and Telangana, while it was below INR of 50,000 in Bihar and Uttar Pradesh (Table 2.3.1). For the 20 states & union territories for whom NDP data were available in 2019-20, Delhi and Sikkim have the highest per capita NDP when Bihar and Uttar Pradesh have the lowest. From 2013 to 2020, the NDP growth rate was highest in Tripura, Telangana indicating growing economic stagnation, while it was lowest in Meghalaya and Puducherry, indicating ongoing economic health.

2.3.2: Gross National Income, Net National Income, Per Capita Income in India from 2011-12 to 2018-19

S. No.	Year	Gross National Income (Rs.in crore)		GDP (Rs.in crore)		Net National Income (Rs.in crore)		Per Capita Net National Income (Rs)	
		At Current Prices	At constant Prices	At Current Prices	At constant Prices	At Current Prices	At constant Prices	At Current Prices	At constant Prices
1	2011-12	86,59,505	86,59,505	87,36,329	87,36,329	77,42,330	77,42,330	63,462	63,462

Source: National Accounts Division, Central Statistics Office, Ministry of Statistics & PI

At constant prices during 2011-12 to 2018-19, India registered an annual growth in GDP of 8.6%, from 87 lakh crores to 140 lakh crores (**Table 2.3.2**). From 2011-12 to 2018-19, at current prices, there is a steady increase in per capita national income. At constant prices, this income has increased from 2011-12 to 2017-19 and has suddenly declined in 2018-19. A close look at India's economic progress in terms of four key economic measures at current and constant prices during 2011-12 to 2018-19 indicates the GDP of the country at constant prices has increased from INR 87 to 140 lakh crores. However, per capita, net income during the same period has declined from INR 63,462 to INR 56,163.

2.3.3: Per Capita Per Day Net Availability of Cereals and Pulses in India 2001-2018 (P)

(Grams per day)

S. No.	Year	Cereals	Pulses	Total
1	2001	386.2	30.0	416.2
2	2002	458.7	35.4	494.1
3	2003	408.5	29.1	437.6
4	2004	426.9	35.8	462.7
5	2005	390.9	31.5	422.4
6	2006	412.8	32.5	445.3
7	2007	407.4	35.5	442.9
8	2008	394.2	41.8	436.0
9	2009	407.0	37.0	444.0

18	2018(P)	438.2	55.9	494.1

Source: Directorate of Economics & Statistics, Department of Agriculture & Cooperation, Ministry of Agriculture.

Notes

Provisional Figures is based on 4th advanced estimates of the production for 2017-18. Net import for April 2017 to March 2018 and stock position as on 01.04.2018

The net availability of food grains is estimated to be Gross Production (-) seed, feed & wastage, (-) exports (+) imports, (+/-) change in stocks

The net availability of food grains divided by the population estimates for a particular year indicate per capita availability of food grains in terms of kg/year. Net availability, thus worked out further divided by the number of days in a year. i.e 365 days gives us net availability of food grains in terms of grams per day.

Figures in respect of per capita net availability given above are not strictly representative of actual level of consumption in the country especially as they do not take in to account any change in stocks in possession of traders, producers and consumers.

Per capita availability of cereals & pulses:

Since independence, India has achieved remarkable progress in producing cereals and pulses and has converted itself from importing to self-sufficient. For meeting minimum calorie requirements of the adult population, as per the dietary guideline manual for Indians in 2011, an adult man who is moderate at work requires 450g of cereals & millets and 90g of pulses, and an adult woman reasonable at work requires 330g of cereals & millets and 75g of pulses. From 2001-18, per capita daily availability of cereals in the country increased from 386g to 438g. The availability of pulses has risen from 30g to 55.9g (Table 2.3.3).

2.4 Employment

2.4.1: State/UT wise Employment in the Organised Sector in India

(in Lakhs)

S. No.	State/UTs	2011 - 12

	Total	176.09	119.70	295.79

Source: Annual Employment Review - 2012, DGE&T, Ministry of Labour & Employment

Notes: Arunachal Pradesh, Sikkim, Dadra & Nagar Haveli and Lakshadweep are not yet covered under Employment Market Programme of Ministry of Labour and Employment

Percent Employed:

In India, of the adult population aged 15-59 years in 2011, 176 lakhs and 296 lakhs people are employed in public and private organized sectors, respectively. As shown in Figure 2.4, among the populous states, Maharashtra, Tamil Nadu, Karnataka, and Uttar Pradesh were found to be essential employment hubs. Around 40% of the working population of the country is concentrated in just four states of Maharashtra, Tamil Nadu, Karnataka, and Uttar Pradesh (**Table 2.4.1**).

Household amenities (the type of roof, drinking water, fluoride, arsenic in water)

Housing is regarded as an 'engine of economic growth' with its linkages to 250 ancillary sectors. House/house roof made of 'Katcha' or temporary material is an indicator of poverty. With huge inter-state variations, out of the 2467 lakh houses covered by the 2011 census in India: 15% households reside in house roofs made of 'Katcha' material (grass, thatch, bamboo, wood, mud, etc.); 24% with tiles (hand/machine-made); 7% bricks; 9% stones; 16% G.I., metal, asbestos sheets; and 29% with concrete (Figure 2.5). As expected, Chandigarh, Delhi, and Puducherry had more than 60% house roofs made of concrete, while in Manipur, Tripura, Arunachal Pradesh, and Assam, less than 5% houses had a concrete roof. It may also be noted that more than half of the house roofs in the states of Goa, Jharkhand, and Chhattisgarh were made of tiles, while more than a quarter of house roofs in Odisha, Arunachal Pradesh, Jammu & Kashmir, and Bihar were made with grass/thatch/bamboo/wood/mud (**Table 2.5.1**).

Source: Census of India, 2011

Safe water is the backbone of a healthy economy as waterborne diseases have an economic burden of approximately USD 600 million a year in India. There is no universally accepted definition for safe drinking water. With huge interstate variations, 32% of Indian households in 2011 have access to safe drinking water as they get it through tap with a treated source and another 12% through the tap from an untreated source (Figure 2.6). Around 34% get drinking water through handpump, 9% through tube well, and 9% through uncovered well. Among the populous states, only in Tamil Nadu and Andhra Pradesh, 70% or more households use tap water while Odisha, Jharkhand, Assam, and Bihar had less than 15% households use the tap.

On the other hand, 87% of houses in Bihar and 65% in Uttar Pradesh, and 58% in Chhattisgarh used handpump for water. Out of the 35 states and union territories, in 11 states, more than 60% of houses have access to drinking water within home premise while in 7 less than 30% house has drinking water sources within the home premise. In Gujarat, Madhya Pradesh, Goa, Jharkhand, almost all the habitations are covered under the National Rural Water Drinking Program when the national average was 81% (**Table 2.5.2**).

Source: IMIS, Ministry of Drinking Water & Sanitation

Slightly less than half of the households (47%) in India have drinking water sources within premises, 36% have near premises, and 18% have water away from the house (Figure 2.7). With minimal state-wise variations, around 81% of the habitations in India are covered under the National Rural Water Drinking Program by April 2019 (Table 2.5.3).

14	Rajasthan	32	4177
15	Uttar Pradesh	19	122
16	West Bengal	6	1413
	Total	174	8439

Source: IMIS data of Ministry of Drinking Water & Sanitation (as on 1.4.2019)

Note: The number of Fluoride affected habitations in GUJARAT, TAMIL NADU and TELANGANA have been reported as 0 (as on 1.4.2019)

Fluoride in drinking water has significant health effects such as dental and skeletal fluorosis. In April 2019, Gujarat, Tamil Nadu, and Telangana reported zero habitations affected by fluoride. However, in 2019, 8439 habitations of 174 districts of 16 states were affected by the fluoride problem (Table 2.5.4 (a)). In 2019, fluoride in drinking water was found in almost all the districts of Rajasthan, 4177 habitations being affected by this public health problem. West Bengal and Bihar are the other states mostly affected by this problem.

2.5.4 (b) : State / District wise Excess Presence of Arsenic in Water as per IMIS of Ministry of Drinking Water & Sanitation as on 1st April 2019

S. No.	State Name	District Name	Number of Habitations with excess arsenic
1	West Bengal	Maldah	1070
		Murshidabad	864

	Total	75	15,673

Source: IMIS data of Ministry of Drinking Water & Sanitation (as on 1.4.2019)

Long-term exposure to arsenic from drinking-water and food can cause cancer and skin lesions. It has also been associated with cardiovascular disease and diabetes. In utero and early childhood exposure has been linked to negative impacts on cognitive development and increased deaths in young adults. Arsenic is naturally present at high levels in the groundwater of a number of countries. Similar to status of fluoride, West Bengal and Assam have the highest number of habitats with excessive arsenic in water (**Table 2.5.4 (b)**). The presence of arsenic in drinking water was also noticed in 15,763 inhabitants across 75 districts and seven states in 2019.

2.5.4 (c) : States/ Districts under National Programme for Prevention and Control of Fluorosis (NPPCF) up to 2020

S. No.	State	Total districts in the state	No. of districts under NPPCF	% Districts covered	Districts under NPPCF
1	Andhra Pradesh	13	9	70%	Nellore, Guntur, Prakasam, Ananthpur, Kurnool, Krishna, Chittoor, Visakhapatnam, Srikakulam
2	Telangana	30	9	30%	Mehbubnagar, Nalgonda, Karimnagar, Jagtial, Sircilla, Suryapet, Yadagiri, Wernaparthi, Nagarkurnool
3	Assam	33	7	22%	Nagaon, Kamrup, Karbi Anglong, Dhubri, Nalbari, Karmganj, Udalgiri
4	Bihar	38	11	29%	Nawada, Banka, Aurangabad, Bhagalpur, Gaya, Jammui, Nalanda, Shekhpura, Kaimur, Munger, Rohtas
5	Chhattisgarh	27	5	19%	Balod, Kanker, Kondagaon, Korba, Mahasamund
6	Gujarat	33	4	13%	Jamnagar, Sabarkantha, Vadodara, Banaskantha
7	Haryana	22	2	10%	Mehendragarh, Mewat

CHAPTER THREE

HEALTH STATUS INDICATORS

**An Overview of Communicable
& Non-Communicable Disease
Prevalence in the country**

HEALTH STATUS INDICATORS

Index

3.1. Communicable Diseases

Table No.	Table Name	Source of Table	Page No.
3.1.1	State/UT wise Cases and Deaths due to Malaria in India, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	143
3.1.2	State/UT wise Clinically Suspected Chikungunya Cases in India, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	145
3.1.3	State/UT wise Cases and Deaths Due to Kala-azar in India, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	147
3.1.4 (a)	State/UT wise Cases and Deaths Due to Acute Encephalitis Syndrome, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	149
3.1.4 (b)	State/UT wise Cases and Deaths Due to Japanese Encephalitis, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	151
3.1.5	State/UT wise Cases and Deaths Due to Dengue in India, 2015 - 2019	Directorate of National Vector Borne Disease Control Programme, DGHS, Ministry of Health & Family Welfare	152
3.1.6 (a)	State/UT wise Cases and Deaths due to Cholera in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	154
3.1.6(b)	State/UT wise Cases and Deaths due to Cholera in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	155
3.1.7 (a)	State/UT wise Cases and Deaths due to Acute Diarrhoeal Diseases in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	156
3.1.7 (b)	State/UT wise Cases and Deaths due to Acute Diarrhoeal Diseases in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	157
3.1.8 (a)	State/UT wise Cases and Deaths due to Enteric Fever (Typhoid) in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	158
3.1.8 (b)	State/UT wise Cases and Deaths due to Enteric Fever (Typhoid) in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	159
3.1.9 (a)	State/UT wise Cases and Deaths due to Acute Respiratory Infection in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	160
3.1.9 (b)	State/UT wise Cases and Deaths due to Acute Respiratory Infection in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	161

Table No.	Table Name	Source of Table	Page No.
3.1.10 (a)	State/UT wise Cases and Deaths due to Tetanus Neonatal in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	162
3.1.10 (b)	State/UT wise Cases and Deaths due to Tetanus Neonatal in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	163
3.1.11 (a)	State/UT wise Cases and Deaths due to Tetanus Other than Neonatal in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	164
3.1.11 (b)	State/UT wise Cases and Deaths due to Tetanus Other than Neonatal in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	165
3.1.12 (a)	State/UT wise Cases and Deaths due to Diphtheria in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	166
3.1.12 (b)	State/UT wise Cases and Deaths due to Diphtheria in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	167
3.1.13 (a)	State/UT wise Cases and Deaths due to Whooping Cough in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	168
3.1.13 (b)	State/UT wise Cases and Deaths due to Whooping Cough in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	169
3.1.14 (a)	State/UT wise Cases and Deaths due to Measles in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	170
3.1.14 (b)	State/UT wise Cases and Deaths due to Measles in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	171
3.1.15 (a)	State/UT wise Cases and Deaths due to Viral Hepatitis (All Causes) in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	172
3.1.15 (b)	State/UT wise Cases and Deaths due to Viral Hepatitis (All Causes) in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	173
3.1.16 (a)	State/UT wise Cases and Deaths due to Rabies in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	174
3.1.16 (b)	State/UT wise Cases and Deaths due to Rabies in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	175
3.1.17 (a)	State/UT wise Cases and Deaths due to Pneumonia (All Causes) in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	176

Table No.	Table Name	Source of Table	Page No.
3.1.17 (b)	State/UT wise Cases and Deaths due to Pneumonia (All Causes) in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	177
3.1.18 (a)	State/UT wise Cases and Deaths due to Meningococcal Meningitis in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	179
3.1.18(b)	State/UT wise Cases and Deaths due to Meningococcal Meningitis in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	180
3.1.19 (a)	State/UT wise Cases and Deaths due to Syphilis in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	182
3.1.19 (b)	State/UT wise Cases and Deaths due to Syphilis in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	183
3.1.20 (a)	State/UT wise Cases and Deaths due to Gonococcal Infection in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	184
3.1.20 (b)	State/UT wise Cases and Deaths due to Gonococcal Infection in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	185
3.1.21	State wise TB Notification from public and private sector and Treatment Outcome During 2018 and 2019	Revised National Tuberculosis Control Programme, DGHS, Ministry of Health & Family Welfare	186
3.1.22	State/UT wise Observed HIV Prevalence Levels in India among ANC clinic attendees, HSS, 2004 – 2017	National AIDS Control Organisation	188
3.1.23	State/UT wise People living with HIV/ AIDS currently alive & on ART in India till December 2019	National AIDS Control Organisation	189
3.1.24	State/UT wise number of General Clients counselled and tested for HIV and sero-positivity detected during 2019-20 (till December, 2019)	National AIDS Control Organisation	190
3.1.25	State/UT wise performance of the Prevention of Parent to Child Transmission of HIV/AIDS (PPTCT) Programme during 2019-20 (till December, 2019)	National AIDS Control Organisation	191
3.1.26	State/UT wise Leprosy Case Detection, Treatment and Discharge in India, 2019	National Leprosy Eradication Programme, DGHS, Ministry of Health & Family Welfare	192
3.1.27	State / Disease wise number of Outbreaks reported under Integrated Disease Surveillance Project (IDSP) during 2019	Integrated Disease Surveillance Project (IDSP)	193
3.1.28	Lab Confirmed Cases and Deaths of Influenza a H1N1 (Swine Flu)- State/UT wise, Year-wise for 2013 to 2019	National Centre for Disease Control, Ministry of Health & Family Welfare	194

Table No.	Table Name	Source of Table	Page No.
3.1.29 (a)	State/UT wise Cases and Deaths due to Chicken Pox in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	195
3.1.29 (b)	State/UT wise Cases and Deaths due to Chicken Pox in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	196
3.1.30 (a)	State/UT wise Cases and Deaths due to Encephalitis in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	197
3.1.30 (b)	State/UT wise Cases and Deaths due to Encephalitis in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	198
3.1.31 (a)	State/UT wise Cases and Deaths due to Viral Meningitis in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	199
3.1.31 (b)	State/UT wise Cases and Deaths due to Viral Meningitis in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT.	200

3.2. Non – Communicable Diseases

Table No.	Table Name	Source of Table	Page No.
3.2.1	National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS) From 01.01.2019 to 31.12.2019	National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS), Dte. GHS, Ministry of Health & Family Welfare.	201
3.2.2	State wise targets & Achievement for various eye diseases during 2018-19	National Programme for Control of Blindness, DGHS, Ministry of Health & Family Welfare	202
3.2.3	Number of Deaths due to Accidents in India for year, 2005-2018 (ICD-10 Code -S00-99 & T00-40)	Accidental Deaths and Suicides in India - 2015' data as received from SCRB /CID; National Crime Records Bureau (NCRB), Ministry of Home Affairs	203
3.2.4	Number of Accidental Deaths & Suicides in India During 2000 to 2018	Accidental Deaths and Suicides in India' , National Crime Records Bureau (NCRB), Ministry of Home Affairs	205
3.2.5	Number, Share & Rate of Accidental Deaths by Causes Attributable to Nature, Un-natural and Other Causes of Accidents during 2017 & 2018	Accidental Deaths and Suicides in India-2016' data as received from States/UTs., National Crime Records Bureau (NCRB), Ministry of Home Affairs	207
3.2.6 (a)	State/UT wise distribution of Suicidal deaths categorised by Sex & Age group, 2018 - Male	National Crime Records Bureau (NCRB), Ministry of Home Affairs	208
3.2.6 (b)	State/UT wise distribution of Suicidal deaths categorised by Sex & Age group, 2018 - Female	National Crime Records Bureau (NCRB), Ministry of Home Affairs	209
3.2.6 (c)	State/UT wise distribution of Suicidal deaths categorised by Sex & Age group, 2018 - Transgender	National Crime Records Bureau (NCRB), Ministry of Home Affairs	210
3.2.7 (a)	Distribution of Suicidal deaths in Major Cities, categorised by Sex & Age group, 2018 – Male	National Crime Records Bureau (NCRB), Ministry of Home Affairs	212
3.2.7 (b)	Distribution of Suicidal deaths in Major Cities, categorised by Sex & Age group, 2018 – Female	National Crime Records Bureau (NCRB), Ministry of Home Affairs	213
3.2.7 (c)	Distribution of Suicidal deaths in Major Cities, categorised by Sex & Age group, 2018 – Transgender	National Crime Records Bureau (NCRB), Ministry of Home Affairs	214
3.2.8	States/UT Wise Proportion of Disabled Population by Type of Disability in India-2011(Census)	Registrar General of India.	216
3.2.9 (a)	State/UT wise Cases and Deaths due to Snake Bite in India, 2018 (January to December)	Monthly Health Condition Reports from Directorate of Health Services of State/UT	218
3.2.9 (b)	State/UT wise Cases and Deaths due to Snake Bite in India, 2019 (January to December) (Provisional)	Monthly Health Condition Reports from Directorate of Health Services of State/UT	219
3.2.10	Statement showing the number of districts surveyed and found to be endemic for Goitre in State/UTs (As per data upto the year 2018-19).	National Iodine Deficiency Disorders Control Programme, Nutrition & IDD Cell, DGHS, Ministry of Health & Family Welfare	220
3.2.11	Physical achievement under National Iodine Deficiency Control Programme during 2018-19	National Iodine Deficiency Disorders Control Programme, Nutrition & IDD Cell, DGHS, Ministry of Health & Family Welfare	221
3.2.12	Suspected Cases of Dental and Skeletal Fluorosis as reported by States under National Programme for Prevention & Control of Fluorosis (NPPCF) upto 31.12.2019	Nutrition & IDD Cell, DGHS, Ministry of Health & Family Welfare	222

3.3. Maternal and Child Health

Table No.	Table Name	Source of Table	Page No.
3.3.1	Maternity Care	National Family Health Survey 2015-16 (NFHS-4)	223
3.3.2	Delivery Care	National Family Health Survey 2015-16 (NFHS-4)	224
3.3.3	Current Use of Family Planning Methods (currently married women age 15–49 years)	National Family Health Survey 2015-16 (NFHS-4)	225
3.3.4	Child Feeding Practises	National Family Health Survey 2015-16 (NFHS-4)	226
3.3.5	Child Immunizations and Vitamin A Supplementation	National Family Health Survey 2015-16 (NFHS-4)	227
3.3.6	Unmet Need for Family Planning	National Family Health Survey 2015-16 (NFHS-4)	228
3.3.7	Anaemia among Children and Women	National Family Health Survey 2015-16 (NFHS-4)	229
3.3.8	Targets & Achievement of Maternity and Child Health Activities (Immunisation) in India, 2014-15 to 2017-18 (April - March)	HMIS Standard RCH Report on Immunization Targets Data as uploaded by the States /UTs on HMIS Portal	230
3.3.9	State/UT wise Incidence of Foeticide and Infanticide in India During 2008 - 2016	National Crime Records Bureau (NCRB), Ministry of Home Affairs	231

HEALTH STATUS INDICATORS

Highlights

Strong longitudinal surveillance system is an integral part and a pre-requisite for any morbidity control programme, in a geographic area. Other than epidemiological information about a particular morbidity, data on number of cases (prevalence/incidence) and deaths associated with that morbidity (case fatality) on a periodic basis, are most important basic data points necessary for understanding the morbidity pattern, of a particular disease. Using surveillance data from a cross-section of populations (mainly public health facilities) in India, Chapter-3 presents latest burden of Communicable, HIV/AIDS and Non-communicable diseases (morbidity) and deaths associated to these morbidity (case fatality) - according to different States and Union Territories, and India as whole. This chapter also provides trends and latest status of maternal and child health situation in India and in its States and Union Territories. Wherever possible, burden of morbidity, deaths and maternal & child health indicators were presented for multiple years, that are most recent.

Note: Since reported data for almost all the morbidities is mainly from Government health facilities, results of this chapter may have limitations in terms of its completeness as cases and deaths from private medical & health care institutions are not included. Hence, findings of this chapter are indicative and not necessarily confirmative of the situation in entire country!

Communicable Diseases

Vector Borne Disease Morbidity

- As part of communicable disease surveillance, National Vector Borne Disease Control Programme (NVBDCP), an umbrella programme, provides clinically suspected burden (annual number of cases) of vector borne diseases viz. Malaria, Japanese Encephalitis (JE), Dengue, Chikungunya, Kala-azar, Acute Encephalitis Syndrome, and Japanese Encephalitis, and associated deaths in India as well as according to States & Union Territories (UT), for multiple years, wherever possible.
- The surveillance is carried out through three types of sentinel sites (Sentinel Surveillance Sites with laboratory facilities, Sentinel Surveillance Sites without laboratory facilities; other Reporting Units).

Box 1 and Figure 3.1 presents clinically suspected burden of vector borne diseases in India, in 2019. The graph also presents disease-specific deaths in the parentheses. In 2019, in India, in terms of burden of diseases, malaria and dengue emerged as the toppers, while in terms of deaths, Acute Encephalitis Syndrome emerged as the top - most killer.

Box 1: Cases and Deaths Due to vector-borne diseases across India, 2019

Type of Disease	Total Cases	Total Deaths
Malaria	3,34,685	50
Dengue	1,56,025	166
Chikungunya	80,294	N.A.*
Acute Encephalitis Syndrome	13,005	700
Kala-azar	2,946	0
Japanese Encephalitis	2,137	220

*N.A. – Not Available

Figure 3.1: Burden of Vector Borne Diseases and respective deaths in India, 2019

Source: Box 1

Other Communicable Disease Morbidity

Chapter-3 also provides, cases and deaths due to other communicable diseases like: Cholera, Acute Diarrhoeal Morbidity, Enteric Fever(Typhoid), Acute Respiratory Infection, Tetanus Neonatal, Tetanus Other than Neonatal, Diphtheria, Whooping Cough, Measles, Viral Hepatitis (All Causes), Rabies, Pneumonia (All Causes), Meningococcal Meningitis, Syphilis, Gonococcal Infection - in India and its States/UTs in 2018 and 2019 by gender, using data from monthly health condition reports from Directorate of Health Services of the State/UT.

Box 2: Top 5 Communicable diseases and associated case fatality (CF)/1000 cases, by gender, 2019

Disease	Total Cases	Cases in Males	Cases in Females	Male deaths	Female deaths	Male deaths /1000 cases	Female deaths /1000 cases
Respiratory Infection	4,09,79,985	2,13,35,848	1,96,44,137	2243	1438	0.1	0.1
Acute Diarrhoeal Disease	1,32,42,907	70,00,780	62,42,127	2097	1521	0.3	0.2
Enteric Fever (Typhoid)	24,45,611	13,10,853	11,34,758	178	150	0.1	0.1
Pneumonia	7,70,524	4,27,060	3,43,464	2512	1624	5.9	4.7
Viral Hepatitis (All Causes)	1,53,220	86,615	66,605	495	245	5.7	3.7

Box-2 presents distribution of top five communicable diseases, by sex, in 2019. Respiratory infection with around 2.13 crore case-load in males and 1.96 crore case-load in females is the most common communicable disease in India in 2019, with a negligible case fatality rate of 0.1 per 1000 cases. This was followed by Acute Diarrhoeal disease with an annual case load of 1.3 crores and with 0.3 CF/1000 cases. There were 24.4 lakh cases of Enteric Fever (Typhoid), but similar to respiratory infection the case fatality was low (0.1 CF/1000 cases). Pneumonia with a case load of around 7.7 lakh cases has a CF of 5.4/1000 cases and Viral Hepatitis (All Causes) with a case load of 1.5 lakh cases had a respective CF of 4.8/1000 cases are the most fatal top-five morbidities.

Source: Tables 3.1.6 (b), 3.1.11 (b), 3.1.12 (b), 3.1.13 (b), 3.1.14 (b), 3.1.18 (b), 3.1.19 (b), 3.1.20 (b)

Prevalence of other eight most prevalent communicable diseases and respective case fatality in India, in 2019 - are presented in Figure 3.2. Among the diseases, Meningococcal Meningitis is the deadliest morbidity with 42.5 deaths per 1000 cases. Gonococcal Infection on the other hand has no case fatality but the highest number of cases (42,962 cases).

Tuberculosis & HIV/AIDS

- Tuberculosis (TB) killed 1.4 million people worldwide and is one of the top 10 causes of death and leading cause from a single infectious agent, above HIV/AIDS.
- Using surveillance data from the public and private sector facilities of all the States & UTs in India, Table 3.1.21 presents: Population covered, TB patients notified for treatment, microbiologically confirmed cases, Microbiologically Confirmed treatment success rate, and No. of patients notified by private sector – in 2018 and 2019. In 2019, a total of 24,04,815 patient were notified of TB. Out of the total microbiologically confirmed cases (11,73,775, in 2019), 80% of the patients were successfully treated.
- With state-wise fluctuations, India has made significant progress in tackling HIV epidemic, from a prevalence of 0.95% in 2004 to 0.28% by 2016-17. In December 2019, based on data from 553 ART centres from across India, 14,71,811 individuals are living with HIV/AIDS.

Non-Communicable Cases

After completion of 73 years of independence, our country has witnessed remarkable progress in health status of its population. However, over past few decades, there has been major transitions in the country that have serious impact on health. Changes have been seen in economic development, nutritional status, fertility and mortality rates and consequently, the disease profile has changed considerably. Though there have been substantial achievements in controlling communicable diseases, still they contribute significantly to disease burden of the country. Decline in morbidity and mortality from communicable diseases have been accompanied by gradual shift to, and accelerated rise in prevalence of, chronic non-communicable diseases (NCDs) such as cardiovascular disease (CVD), diabetes, chronic obstructive disease (COPD), cancers, mental health disorders and injuries.

- Out of 6.8 crore people screened under National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS): 6.3% were diagnosed with hypertension, 4.9% with diabetes, 1.9% with HTN & DM, 0.3% with CVDs, 0.15% with stroke and 0.1% with common cancers.

- Suicide rates are increasing significantly among young adults. Total Suicides recorded in 2018 were 1,34,516. Maximum number of Suicide Cases (46,912) is reported between the age group 18- 30 Years followed by 42,495 cases in age group of 30 -45 years [Table No. 3.2.6(A), (B), (C)]
- Total number of disabled persons in India is 26,814,994 as per the Census 2011. [Table No. 3.2.8]
- In 2019 a total of 3,164 died due to snake bite while this figure in 2018 was just 885. [Table No. 3.2.9 (B)]
- In 2019 a total of 118 deaths/cases took place due to rabies, there was neither a significant decrease or increase in the number of cases compared to 2018 (116 deaths/cases) [Table 3.1.16 (A) & (B)].
- Besides diseases road traffic accidents also contribute to a lot of deaths between 2017 (1,75,586 deaths) and 2018 (1,78,832 deaths) there has been a 2% increase in the number of deaths due to road traffic accidents [Table 3.2.3]

Maternal and Child Health (NFHS -4)

- With huge interstate variations: 59% mothers in India had antenatal check-up in the first trimester.
- With huge interstate variations: 79% deliveries in India are institutional deliveries
- As per NFHS-4 findings, around 13% couples in India had unmet need for contraception (don't want children but not using any FP method) while unmet need for spacing methods is 5.7% (Table 3.3.6).
- With huge interstate variations: 42% children under age 3 years were breastfed within one hour of birth.
- With substantial interstate variations, in India 62% children got fully immunization (BCG, measles, and 3 doses each of polio and DPT)

3. Morbidity and Associated Mortality

Figure 3.3 : India's annual malaria cases & deaths

Source: Table 3.1.1

Malaria is an acute parasitic illness caused mainly by *Plasmodium falciparum* or *Plasmodium vivax*, in India. Malaria continues to pose a major public health threat in different parts of the country, particularly due to *Plasmodium falciparum*, due to which severity may develop resulting in death, if not treated early. In India during 2015 to 2019, there is definite decrease in burden of this morbidity and number of deaths associated with it, from 384 cases in 2015 to 50 in 2019 (Figure 3.3). In 2019, maximum number of malaria cases of 92,732 were reported from Uttar Pradesh (92,732) followed by Chhattisgarh (60,575), while maximum number of malaria-associated deaths were reported from Chhattisgarh (17).

3.1.2 State/UT wise Clinically Suspected Chikungunya Cases in India, 2015 - 2019 (ICD - 10 Code A92.0)

Note: Death due to Chikungunya not reported in India

Source: Table 3.1.2

Source: Table 3.1.2

With annual fluctuations, burden of clinically suspected Chikungunya cases in India generally showed an upward trend during 2015-19, from a meagre 27,553 in 2015 to 80,294 by 2019 (Table 3.1.2). Mortality data for these cases is not available. In 2019, maximum number of Chikungunya cases of around 43,331 were reported from Karnataka followed by Gujarat with 7,647 cases. At least Eleven states & union territories of India reported zero Chikungunya cases in 2019.

Figure 3.5 : Cases and death due to kalazar

Source: Table 3.1.3

Kala-azar is the second largest parasitic killer in the world. In India *Leishmania donovani* is the only parasite that causes this morbidity. In India, only the states of Bihar, Jharkhand, Uttarakhand and West Bengal are reporting clinically suspected cases of Kala-azar and associated deaths during 2015 to 2019 (Table 3.1.3). In 2019, only 4 states namely Bihar, Jharkhand, Uttarakhand and West Bengal reported Kala-azar cases; of which only Bihar accounted for (2,293/2,946=78%) most of the burden of Kala-azar in the country, with zero deaths.

Figure 3.6 (a) Cases and Deaths Due to Acute Encephalitis Syndrome in India

Source: Table 3.1.4(a)

Figure 3.6 (b) : India's annual AES cases & deaths/100 cases

Source: Calculation based on Table 3.1.4(a) Data

Acute encephalitis syndrome (AES) is characterized by an acute onset of fever and clinical neurological manifestation that includes mental confusion, disorientation, delirium, or coma. Based on clinically suspected cases of AES, in India, during 2015-19, with annual fluctuations, its burden ranges between 9000-14000 cases (Table 3.1.4-a). However, AES is mainly confined to certain geographies (Assam, Manipur, Meghalaya, Bihar, Jharkhand, Odisha, Tamil Nadu, Uttarakhand and West Bengal) with varying case fatality (per hundred cases), as shown in Figure 3.6 (b). In 2019, 18 states & union territories reported zero cases of AES.

3.1.4 (b) : State/UT wise Cases and Deaths Due to Japanese Encephalitis, 2015 - 2019 (ICD - 10 Code A83.0)

Japanese encephalitis (JE) cases have been reported only from certain States/UTs of the country. . Based on clinically suspected cases of JE, in India, during 2015-19, with minor annual fluctuations, its burden ranges around 2,000 cases and around 200 deaths (10% CF per 100 cases) (Table 3.1.4-b). However, in 2019, burden of JE is more than 100 cases in the following states/UTs, with respective percent CF in the parentheses: Assam (25.1%); Jharkhand (2.7%); Manipur (1.7%); Meghalaya (4.8%); Odisha (0.0%); Tamil Nadu (0.5%); and Uttarakhand (7.9%).

Figure 3.7 (a): India's Annual Dengue Cases and Deaths(per100000)

Source: Table 3.1.5

Dengue transmitted by Aedes Mosquito is a cause of great concern to public health in India. Every year, thousands of individuals are affected and contribute to the burden of health care. Dengue outbreaks have continued since 1950s but severity of disease has increased in the last two decades.

FIGURE 3.7 (b): STATE/UT WISE CASES OF DENGUE

Source: Table 3.1.5

In India during 2015 to 2019, although there is fluctuation in burden of this morbidity (Table 3.1.5), there is definite drop in CF associated with it, from 220 per one lakh cases in 2015 to 106 (per one lakh cases) in 2019 (Figure 3.7 (a)). In 2019, maximum number of dengue cases of around 17,000 were reported from Gujarat and Karnataka, while maximum number of dengue -associated deaths were reported from Manipur and Uttarakhand. A total of 1,56,025 cases and 166 Deaths due to Dengue were reported in 2019.

Source: Monthly Health Condition Reports from Directorate of Health Services of State/UT.

Cholera is one of the most common monsoon morbidities in India. It is a bacterial infection that is spread by contaminated food and water. Tables 3.1.6 (a) and (b), presents sex-wise distribution of cholera cases and deaths in 2018 and 2019. There is huge difference in number of reported cholera cases and deaths in these two years (624 cases & 6 deaths in 2018 and 15,024 cases and 0 deaths in 2019). This is mainly because Uttar Pradesh reported 8,676 cases in 2019 (when respective figure in 2018 was 153) and Madhya Pradesh with 3,811 cases (when respective figure in 2018 was 2).

Acute Respiratory Infection is an infection that may interfere with normal breathing process has two types “upper” and “lower” infection. This infection is particularly dangerous to children, older adults, and people with immune system disorders. It is the topmost leading cause of morbidity in India with an annual case load of around 4 crores in 2018 and 2019 (Tables 3.1.9-a&b). The burden of this morbidity is slightly higher among males as compared to females. The CF associated with this morbidity is 9/100,000 cases in India during 2018-19. In 2019, burden of this morbidity is above 50 lakh cases in Kerala and Rajasthan, while CF associated with it is highest in Assam (398/100,000 cases) and Delhi (129/100,000 cases).

Tetanus other than Neonatal morbidity has affected around 10,000 people in India in 2018 and 2019 (Tables 3.1.11-a&b), although number of deaths associated with this morbidity have dropped from 71 in 2018 to 29 in 2019. The burden and associated case fatality rate are high among males as compared to females. In 2019, burden of this morbidity is 8,068 in Assam followed by 862 in Jharkhand. Eighteen states & UTs reported zero case load. With a single digit case load, case fatality is highest in Delhi and Odisha.

There is slight increase in number of reported Diphtheria cases between 2018 and 2019 [Refer Table No 3.1.12-(a)&(b) with respective case load of 11,638 and 12,258 cases, although deaths due to this morbidity have declined by three-fold from 182 in 2018 to 57 in 2019. Both mortality and morbidity are higher among males as compared to females. In 2019, more than 82% of this morbidity is confined to Assam (with 10,024 cases. However, with fewer cases, the case fatality is highest in Delhi (102/1000 cases) and Kerala (41/1000 cases).

Tables 3.1.13(a)&(b), presents sex-wise distribution of cases and deaths due to Whooping Cough in India, in 2018 and 2019, with a case load of around 18,883 cases in 2018 and 15,505 cases in 2019. Overall, there is slight reduction in the total cases within the country. Case load is slightly higher in males as compared to females. However, there is almost a three-fold increase of CF (42/100,000 cases in 2018 to 160/100000 cases in 2019). In 2019, all the 24 deaths due to this morbidity was reported from Assam when there were zero deaths despite 4,689 cases in the state in 2018.

During 2018 and 2019 India reported around 1.5 lakh Viral Hepatitis (All Causes) cases (Tables 3.1.15-a&b). Both mortality and morbidity is higher among males as compared to females. In 2019, Uttar Pradesh (with 25,615 cases), Haryana (with 17,523 cases), Andhra Pradesh (with 15,791 cases) and Punjab (with 15,693 cases) were major contributors to nation's Viral Hepatitis burden. In terms of deaths, Dadra & Nagar Haveli (with 86 cases and 58/1000 CF) and Meghalaya (with 209 cases and 19/1000 CF) recorded highest.

Source: Table 3.1.17 (b)

Pneumonia is an inflammatory condition of the lung primarily affecting the small air sacs known as alveoli. Symptoms include: productive or dry cough, chest pain, fever and difficulty breathing. Children and older adults are affected mostly by this morbidity. Figure 3.8 (a),(b) presents gender- wise distribution of pneumonia cases and deaths in India, in 2018 and 2019. Cases are slightly more in males as compared to females both in 2018 and 2019 Figure 3.8 (a). While the overall number of cases reduced for both males and females from 2018 to 2019, however the case fatality rate (Figure 3.8 (b)) increased from 0.5 (50%) in 2018 to 0.59 (59%) in 2019 for males and 0.38 (38%) to 0.47 (47%) for females. State-wise distribution of cases [Refer Tables 3.1.17 (a)]&(b) indicate that : Uttar Pradesh (with 158,416 cases in 2018 and 159,238 in 2019); West Bengal (with 266,545 cases in 2018 and 140,450 in 2019); and Rajasthan (with 151,403 cases in 2018 and 128,975 in 2019) are the biggest contributors of morbidity.

Figure 3.9: Meningococcal Meningitis cases and deaths/1000, India

Source : Tables 3.1.18(a)&(b).

Meningococcal Meningitis is a bacterial infection caused by *Neisseria meningitidis*. It is commonly seen as an infection of the brain (meningitis) and/or infection of the blood (septicaemia or blood poisoning), may kill diseased in a matter of hours or cause severe long-term sequelae with devastating effects. Figure 3.9 presents gender-wise distribution of **Meningococcal Meningitis** cases and deaths in India, in 2018 and 2019. Case load is substantially higher in males as compared to females. CF associated with this morbidity has dropped in males while it has marginally increased in females. In 2019, Andhra Pradesh contributed 41% of the national burden with 26/1000 cases succumbing to this disease followed by West Bengal contributing 19% caseload with 93/1000 CF [Refer Tables 3.1.18(a)&(b)].

Source: Monthly Health Condition Reports from Directorate of Health Services of State/UT.

During 2018 and 2019, India's Syphilis cases rose from around 16,000 in 2018 to 26660 by 2019. There was not just the increase in the number of cases but also mortality where in 2018 no deaths were reported, in 2019, 35 deaths were reported [Refer Tables 3.1.19(a)]&(b)]. In 2019, just three states of Andhra Pradesh (with 10,253 cases), Rajasthan (with 4,912 cases) and Telangana (with 4,809 cases) contributed three-fourth of the national Syphilis burden.

Note:

1. "Total patients notified for treatment" is given in place of the term Total patients registered for treatment. Total patients include patients both from the Public and the Private sector.
2. Microbiologically Confirmed is the new nomenclature which includes erstwhile Smear Positive patients.
3. The treatment outcome of Microbiologically confirmed cases given in columns 6 and 10 pertains to the cases notified in the previous year and are not related to the columns 5 and 9. The treatment outcome of only DSTB microbiologically confirmed notified TB patients of both Public and Private sector are given.
4. The data source is Nikshay.
5. Date of data extraction for TB Notification (including microbiological confirmed and private sector notification) for 2018 & 2019 is February 2020 (2018 figure has been updated).
6. Date of data extraction for TB Treatment outcome for 2018 Microbiologically confirmed TB patients is July 2019.
7. Date of data extraction for TB Treatment outcome for 2019 Microbiologically confirmed TB patients is February 2020.
8. The notification data of the year 2018 submitted now in NHP 2020 is different than the data submitted earlier for NHP 2019 due to the process of data validation including deduplication of the program data.
9. NA - Not Available

Out of entire population covered in India during 2018 to 2019, there is increase in patients notified for treatment, confirmed cases, treatment success rate, and No. of patients notified by public and private sector. In the year 2019, a total of 24,04,815 patients were notified with TB out of which, 11,73,775 (49%) patients were found to be microbiologically confirmed. Among the states Uttar Pradesh had the highest number of notified patients (4,86,385 cases), followed by Maharashtra (2,27,348 cases), Madhya Pradesh (1,87,407 cases), Rajasthan (1,75,218 cases), and Gujarat (1,59,158 cases) (Table 3.1.21).

- NA - Not Applicable

Table 3.1.22 presents, state/UT wise observed HIV prevalence levels in India among ANC clinic attendees, using data from HSS, 2004 – 2017. With state-wise fluctuations, India has made significant progress in tackling HIV epidemic, from a prevalence of 0.95% in 2004 to 0.28% by 2016-17. As per the most recent (2016-17) data: Mizoram (with 1.19% prevalence), Nagaland (with 0.82%), and Meghalaya (with 0.73% prevalence) – are high prevalence states and UTs, while states like Arunachal Pradesh, Chandigarh, Daman & Diu and Puducherry recorded zero prevalence rate by 2016-17.

3.1.23 State/UT wise People living with HIV/AIDS currently alive & on ART in India till December 2019 (ICD – 10 Code B20 – B24)

Note:

1. All detected cases are initiated treatment with MDT (Multidrug Therapy)
2. The data is strictly provisional and subject to updation.

India is currently running one of the largest leprosy eradication programs, the National Leprosy Eradication Programme (NLEP). Despite such a program, during Jan-Dec., 2019, India detected 1,22,088 new leprosy cases, out of them 1,14,799 (94%) cases were discharged as they got cured from the morbidity and 6,943 (5.7%) were under deletion of other cases RFT [Refer Table 3.1.26]. During this one year, Bihar, Maharashtra, Uttar Pradesh and Odisha recorded more than ten thousand new cases.

Others*:- Brucellosis, Chandidpura, Dengue & Chikungunya, Dengue & Leptospirosis, Fever With Rash, Filariasis, Hand Foot & Mouth Disease, Jatropha Seed Poisoning, Leptospirosis, Scrub Typhus, Melioidosis, Mixed Fever, Mushroom Poisoning, Nipah, Salmonellosis, Trypanosomiasis, Typhoid and Chikungunya, Viral Hepatitis A&E & Leptospirosis

Using Disease Outbreaks data from Integrated Disease Surveillance Project (IDSP) on 30 diseases during 2019, Table 3.1.27 provides Sstate & UT wise disease outbreaks. In 2019, the country had 1677 disease outbreaks. The following were the top five outbreaks in the country: Food Poisoning (345 outbreaks), Acute Diarrheal Diseases (341 outbreaks), Chickengpox (187 outbreaks), Dengue (181 outbreaks), and Chikungunya (72 outbreaks). In 2019, the following six states had more than 100 outbreaks: Karnataka (212), Kerala (134), Maharashtra (131), Odisha (123), Assam (110), and Tamil Nadu (102).

Note: NA - Not Available

Table 3.1.28 presents, State/UT wise Lab Confirmed Cases and Deaths due to Influenza-AH1N1 (Swine Flu) during 2013 to 2019. With huge state-wise fluctuations, Swine Flu cases during 2013-19 range between 937 and 42,592, lowest in 2014 and highest in 2015. On the other hand, CF associated with this disease is highest in 2014 (23/100 cases) and lowest in 2019 (4/100 cases) in 2019. Out of the 28,978 swine flu cases in 2019, only three states of Rajasthan (with 5,092 cases and CF 4/100 cases); Gujarat (with 4,844 cases and CF 3/100 cases); and Delhi (with 3,627 cases and CF 0.9/100 cases) – contributed to 47% of the national burden, when national CF was 4.2/100 swine flu cases.

Source: Monthly Health Condition Reports from Directorate of Health Services of State/UT.

Tables 3.1.29 - (a)&(b) provides State/UT wise cases and deaths due to Chicken Pox in India by gender, in 2018 and 2019. There is marginal increase (from 67,927 in 2018 to 70,226 in 2019) in number of chicken pox cases in the country. Total number of deaths in the country have also marginally increased from 50 in 2018 to 54 in 2019. During these two years, although male morbidity is slightly higher in males as compared to females, the CF is substantially high among males as compared to females (in 2019, male CF was 102/100,000 cases vs 49/100,000 cases in females). In 2019, just two states Kerala (with 33,804 cases and 30/100,000 CF) and West Bengal (with 7,743 cases and 530/100,000 CF) – contributed almost 60% of the national case load and 94% of the death load associated with this morbidity.

3.1.30 (a) : State/UT wise Cases and Deaths due to Encephalitis in India, 2018 (January to December) (ICD – 10 Code G04.9)

Tables 3.1.30-(a)&(b) provides State/UT wise cases and deaths due to Encephalitis in India by gender, in 2018 and 2019. There is marginal decrease (from 10,402 in 2018 to 7,607 in 2019) in number of encephalitis cases in the country. Total number of deaths in the country have also declined in the same pattern from 522 in 2018 to 356 in 2019. During these two years, morbidity was substantially high in males as compared to female, while CF was marginally high in males as compared to females (in 2019, male CF was 4.9/100 cases vs 4.3/100 cases in females). In 2019, just three states Assam (with 1,623 cases and 2.3/100 CF), Andhra Pradesh (with 1,203 cases and 2.9/100 CF) and West Bengal (with 1,079 cases and 1.7/100 CF) – contributed more than half of the national case load and a quarter of the death load.

Tables 3.1.31-(a)&(b) provides State/UT wise cases and deaths due to Viral Meningitis in India by gender, in 2018 and 2019. There is marginal decrease (from 14,075 in 2018 to 12,536 in 2019) in number of meningitis cases in the country. On the other hand, total number of deaths in the country have slightly increased from 140 in 2018 to 153 in 2019. During these two years, morbidity was substantially high in males as compared to females, while CF was almost double in males as compared to females (in 2019, male CF was 1.6/100 cases vs 0.8/100 cases in females). In 2019, just four states Assam (with 3,972 cases and 1.4/100 CF), Karnataka (with 1803 cases and zero CF), Madhya Pradesh (with 1434 cases and zero CF) and Andhra Pradesh (with 1252 cases and 2.1/100 CF) – contributed two-thirds of the national case load and a slightly more than half of the death load.

Note: NA - Not Available

Using screening data of 6,82,62,672 individuals, screened at NCD centres from across India, during 1st January 2019 to 31st December 2019, by National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS) Table 3.2.1 provides number of persons diagnosed with diabetes, hypertension, HTN & DM, CVDs, Stroke and common cancers – according to State/UT. Out of 6.8 crore people screened: 6.25% were diagnosed with hypertension, 4.9% with diabetes, 1.9% with HTN & DM, 0.3% with CVDs, 0.15% with stroke and 0.01% with common cancers. Among the States/UTs, prevalence of diabetes was highest in Bihar (32.7%), Andhra Pradesh (23.1%), and Odisha (17.7%) while prevalence is lowest with <1.5% in Daman & Diu and Delhi. Prevalence of hypertension was highest in Assam (25.1%), Andhra Pradesh (22.9%) and Odisha (22.2%), while it is lowest in Puducherry (0.023%) and Lakshadweep (0.06%). Prevalence of both HTN & DM was highest in Madhya Pradesh (8.4%), West Bengal (6.4%) and Chandigarh (6.1%), while it is lowest with 0.5% in Puducherry, Daman & Diu, Tamil Nadu and Arunachal Pradesh. However, prevalence of CVD was found to be highest in Puducherry (7.4%) and lowest in Mizoram (0.02%). Prevalence of stroke was highest in Puducherry (1.45%) and lowest in Sikkim (0.01%). Prevalence of common cancers was highest in Himachal Pradesh (1.46%) and lowest in Sikkim (0.00%).

Source: National Programme for Control of Blindness, DGHS, Ministry of Health & Family Welfare

Table 3.2.2 presents State/UT wise targets & achievement of various eye diseases during 2018-19, using data from National Programme for Control of Blindness. Against various targets proposed for different blindness control measures, India's story was a success. India has achieved 101% of cataract operations target, achieved 98% of free spectacles to school children's target, achieved 137% of collection of donated eyes target, and achieved 853% of Other Eye Diseases (Diabetic Retinopathy, Glaucoma, Squint, ROP etc). Against the targets set for cataract operations the following were states/UTs were the three toppers: Puducherry achieved 329% of set target; Gujarat achieved 201% of set target; and Chandigarh achieved 179% of set target. On the other hand, Nagaland achieved 10% of set target, Manipur (17%) and Daman & Diu 20%.

Source: Table 3.2.6 (a), (b), (c)

Source: Table 3.2.6 (a), (b), (c)

Tables 3.2.6-a to c provides male, female and transgender-wise suicidal deaths by States/UTs in 2018. Among the suicidal deaths in males, 65% deaths occurred in the age group of 18-45 years. In 2018, maximum suicidal deaths (15%) occurred in Maharashtra followed by around 9-10% each in Tamil Nadu and Karnataka. Among the suicidal deaths in females, 70% of deaths occurred in the age group of 18-45 years. In 2018, maximum suicidal deaths (13%) occurred in West Bengal followed by around 10-11% each in Tamil Nadu, Maharashtra and Madhya Pradesh. Deaths in transgender table are not matching with table 3.2.4.

Figure 3.12 (a) Proportion of Disabled Population by Type of Disability Census 2011

Source: Table 3.2.8

Figure 3.12 (b) % Contribution of Disability by State/UTs

Source: Table 3.2.8

Table 3.2.8 presents State/UT wise distribution of disabled population by type of disability in India according to 2011 census. The country had 2.6 crore disabled people in 2011, and 54 lakhs cannot walk and around 50 lakh each had hearing and vision disability. Around 20 lakhs had in-speech disability. Around 15 lakhs were mentally retarded while 7.2 lakh people had mental illness, according to Registrar General of India. The most populous state of Uttar Pradesh had 41.5 lakh disabled followed by Maharashtra with around 30 lakhs disabled. Andhra Pradesh, Bihar and West Bengal had 20.0 - 23.5 lakh disabled population in 2011.

Source: Monthly Health Condition Reports from Directorate of Health Services of State/UT

State/UT wise cases and deaths due to snake bite in India, in 2018 & 2019 were presented in Table 3.2.9-(a)&(b). In both the years the country had around 1.6 lakh snake bite cases. However, in 2019 a total of 3,163 died due to snake bite when this figure in 2018 was just 887. Snake bite cases and deaths were substantially more among males as compared to females. In 2019, Odisha reported 1872 deaths due to snake bite while this figure in 2018 was just 98. In 2019, Andhra Pradesh with 467 deaths, Uttar Pradesh with 73 deaths, and West Bengal with 239 deaths are the other three states contributing to this problem.

3.2.10 Statement showing the number of districts surveyed and found to be endemic for Goitre in State/UTs (As per data upto the year 2018-19).

Note: TGR: Total Goitre Rate

Table 3.2.10 shows State/UT wise number of districts surveyed and found to be endemic for goitre in 2018-19. Out of the 734 districts in the country 434 districts were surveyed for goitre and 351 (81% of surveyed) districts were found to be endemic with TGR >5% for goitre. Excluding 12 States/UTs, in the remaining 24 states/UTs 100% districts were found to be endemic with TGR >5% for goitre.

Table 3.2.11 presents State/UT wise number of samples that: confirmed to standard iodine content >15ppm, having optimal iodine >100g/L (Urinary Iodine Excretion) and adequately iodate under National Iodine Deficiency Control Programme, during 2018-19. Out of the total salt samples tested for iodine level in the country 90% samples have confirmed to the standard iodine content >15ppm. Out of the total urine sampled tested in India, 89% are having optimal iodine >100g/L in urinary iodine excretion. Also, out of the total salt samples tested in India, 92% samples were adequately iodate. Salt sample testing for iodine level was highest in Maharashtra (13,872 samples), Tamil Nadu (13,302) and Karnataka (11,153). Urine sample testing was highest in Punjab (5,774), Karnataka (4,957) and Delhi (3,845). Salt sample testing was better in West Bengal (55,61,235), Karnataka (38,69,203) and Assam (15,54,355).

3.2.12 Suspected Cases of Dental and Skeletal Fluorosis as reported by States under National Programme for Prevention & Control of Fluorosis (NPPCF) up to 31.12.2019

As per data provided by the States upto December 2019, based on Community and Schools Survey;

NA: Data Not Available

Table 3.2.12 presents States/UT wise suspected cases of dental and skeletal fluorosis as reported, under National Programme for Prevention & Control of Fluorosis (NPPCF) up to 31.12.2019. Suspected dental cases were reported from community and schools, while skeletal fluorosis cases were reported only from community. Out of the 23.7 lakh people examined, 8.86 lakh (37%) had dental problems and 2.63 (11%) were suspected skeletal cases. Out of the 21 lakh students examined in schools, 5.9 lakh (29%) were suspected dental cases.

Source: National Family Health Survey 2015-16 (NFHS-4)

Notes: * for last birth in the 5 years before the survey

Table 3.3.1 presents six types of maternal antenatal and postnatal care indicators for India and the states/UTs in 2015-16, based on findings from National Family Health Survey 2015-16 (NFHS-4). With huge interstate variations: 59% mothers in India had antenatal check-up in the first trimester (95% in Kerala and 25% in Nagaland); 51% mothers in India had at least 4 antenatal care visits (92% in Andaman & Nicobar islands and 14% in Bihar); 89% mother's last birth was protected against neonatal tetanus (97% in Sikkim and 64% in Nagaland and Arunachal Pradesh); 30% mothers consumed iron folic acid tablets for 100 days or more when they were pregnant (82% in Lakshadweep and 4% in Nagaland); 21% mothers had full antenatal care (66% in Lakshadweep and 2% in Nagaland); and 62% mothers received postnatal care from a doctor/nurse/LHV/ANM/midwife/other health personnel within 2 days of delivery (93% in Lakshadweep and 22% in Nagaland).

Notes: * Includes other methods that are not shown separately.

Current Use of family planning (FP) methods (currently married women age 15–49 years) according to states/UTs in 2015-16, based on NFHS-4 findings were presented in Table 3.3.3. In 2015-16, 53.5% couples in India were using some FP method (47.8% modern and 5.7% traditional). Among the modern methods, female sterilization was most popular method with 36% users, followed by 5.6% condom users, 4.1% OCP users, 1.5% IUD and 0.3% male sterilization users. Modern method users were highest in Andhra Pradesh (69.4%) and minimum in Manipur (13%). On the other hand, as high as 21% couples in Manipur are using traditional methods and almost nil users in Andhra Pradesh and Mizoram. Condom users were highest in Chandigarh (27.3%); OCP users were highest in Tripura (26.3%); IUD users were highest in Punjab (6.8%); and male sterilization users were highest in Himachal Pradesh (2.4%).

Note: () Based on 25-49 unweighted cases

Immunization coverage among children aged 12-23 months in states and UTs in 2015-16, based on findings from NFHS-4 are presented in Table 3.3.5. With substantial interstate variations, in India 62% children got fully immunization (BCG, measles, and 3 doses each of polio and DPT), and full immunization coverage being highest in Puducherry (91%) and lowest in Nagaland (36%). In terms of specific immunizations, 92% children in India received BCG (100% in Lakshadweep and 68% in Nagaland); 73% received 3 doses of polio vaccine (95% in Puducherry and 53% in Nagaland); 78% received 3 doses of DPT vaccine (Puducherry 96% and Nagaland 52%); 81% received measles vaccine (Goa 97% and Nagaland 50%); 63% received 3 doses of Hepatitis B vaccine (Punjab 91% and Gujarat 39%); and 60% received vitamin A dose in last 6 months (Goa 90% and Nagaland 27%).

Source: National Family Health Survey 2015-16 (NFHS-4)

Notes:

*currently married women age 15–49 years

Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have unmet need for spacing if they are:

- At risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant.
- Pregnant with a mistimed pregnancy.
- Postpartum amenorrhoeic for up to two years following a mistimed birth and not using contraception.

Women are considered to have unmet need for limiting if they are:

- At risk of becoming pregnant, not using contraception, and want no (more) children.
- Pregnant with an unwanted pregnancy.
- Postpartum amenorrhoeic for up to two years following an unwanted birth and not using contraception.

Women who are classified as in fecund have no unmet need because they are not at risk of becoming pregnant. Unmet need for family planning is the sum of unmet need for spacing plus unmet need for limiting.

As per NFHS-4 findings, around 13% couples in India had unmet need for contraception (don't want children but not using any FP method) while unmet need for spacing methods is 5.7% (Table 3.3.6). Unmet need for contraception is highest in Manipur (30%) and lowest in Andhra Pradesh (4.7%). Unmet need for spacing methods is highest in Meghalaya (15.3%) and lowest in Chandigarh (1.8%).

3.3.7 Anaemia among Children and Women*

S. No.	States/UTs	Children age 6-59 months who are anaemic (<11.0 g/dl) (%)	Non-pregnant women age 15-49 years who are anaemic (<12.0 g/dl) (%)	Pregnant women age 15-49 years who are anaemic (<11.0 g/dl) (%)	All women age 15-49 years who are anaemic (%)

Note: * Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude.

Table 3.3.7 presents four types of indicators on anaemia among children and women in India and the states/UTs in 2015-16, based on findings from NFHS-4. With huge interstate variations: 58% of the children aged 6-59 months in India are anaemic (<11.0 g/dl), while anaemic levels in children were highest in Dadra & Nagar Haveli (85%) and lowest in Mizoram (18%). In India 53% of non-pregnant women aged 15-49 years were anaemic (<12.0 g/dl) and anaemia levels in non-pregnant women are highest in Dadra & Nagar Haveli (80%) and lowest in Mizoram (22%). Half of the pregnant women aged 15-49 years were anaemic (<11.0 g/dl) and anaemia levels in pregnant women are highest in Jharkhand (63%) and lowest in Kerala (23%). Among all women in India 53% were anaemic, and in the states/UTs this level is highest in Dadra & Nagar Haveli (80%) and Mizoram (23%).

3.3.8 Targets & Achievement of Maternity and Child Health Activities (Immunisation) in India, 2014-15 to 2019-20 (April - March) (Figures in Million Nos.)

Year	Need assessed	Achievement	Achievement of need assessed %	Need assessed	Achievement	Achievement of need assessed %
T.T. (Preg. Women)				D.P.T. (3 rd dose) / Pentavalent (3 rd dose)

Source: HMIS Standard RCH Report on Immunization Targets

Note: Data as uploaded by the States /Uts on HMIS Portal

Table 3.3.8 presents targets & achievement of maternal and child health activities (Immunisation) in India during 2014-15 to 2019-20 (April - March). During these years achievement of: TT coverage in pregnant women has increased from 79-89%. D.P.T. (3rd dose) / Pentavalent (3rd dose) coverage initially drastically reduced from 68.8% (2014-15) to 0.5% (2017-18), but later recovered to 91.7% coverage (2019-20) ; DT(5 years)/ DPTS coverage has increased from 52-67.5%; coverage of POLIO (3rd dose) remained constant at 87% till 2018-19 but later improved to 91.1% in 2019-20; coverage of BCG has marginally decreased from 92.5-91%; and coverage of measles has increased from 87-93.9%.

#: Clarification pending from Assam and Arunachal Pradesh

Table 3.3.9 presents state/UT wise incidence of foeticide and infanticide in India during 2008 – 2016. During these years incidence of foeticide in India has almost doubled from 73 in 2008 to 144 in 2016. In 2016, incidence of foeticide is highest in Uttar Pradesh (52), Rajasthan (21) although more than 20 States/UTs recorded zero foeticides. On the other hand, number of infanticide deaths in India has more than halved from 140 in 2008 to 56 by 2018, although in 2018 Haryana recorded 10 such cases when around 20 States/UTs recorded zero cases.

Highlights

Health Financing is increasingly being recognized as an area of major policy relevance to achieve Universal Health Coverage (UHC). It deals with generation, allocation and use of financial resources in health system. Understanding the country's Health Financing system allows to recognize current finances available for health, ways to raise more funds for health, mechanisms to efficiently and equitably allocate, purchase and spend finances to improve access to health services and reduce out of pocket expenditures that lead to catastrophe and impoverishment. Thus, appropriate Health Financing is a means to ensure adequate funds for health care, provide equitable access to all population groups and reduce barriers to utilize health services. This chapter on Health Financing will provide detailed information on – 1) Public health expenditure on health; 2) Average medical expenditure; and 3) Health coverage and insurance.

- Total public expenditure on health for the year 2015-16 stood at Rs 1.4 lakh crores. (Table 4.1.1)
- Per capita public expenditure on health in nominal terms has gone up from Rs 621 in 2009-10 to Rs 1112 in 2015-16. (Table 4.1.2)
- Public expenditure on health as a percentage of GDP was 1.02% in 2015-16. There is no significant change in expenditure since 2009-10. (Figure 4.1)
- The Centre-State share in total public expenditure on health was 31:69 in 2015-16. (Figure 4.2)
- Total public expenditure on health (excluding other Central Ministries) in 2015-16 was Rs 140,054.55 crores, with Medical and Public Health comprising the major share (78.7%). The share of Family Welfare was 12.6%. (Figure 4.3)
- Urban and rural health services constituted 70% of the public expenditure on medical and public health in 2015-16. (Figure 4.4)
- The North-Eastern states had the highest and EAG states (including Assam) had the lowest average per capita public expenditure on health in 2015-16 (excluding UTs). (Table 4.1.4)
- The North Eastern states had the highest public health expenditure as a percentage of GSDP in 2015-16 (2.76%). The value was 1.36% for EAG (including Assam) and 0.76% for major non-EAG states. (Table 4.1.5)
- As per NSS 75th, Household income/savings and borrowing is the major source of financing of in-patient hospitalization for all quintiles in both rural and urban population. (Table 4.2.1(a))
- More than half of the both rural and urban population across all quintiles is not covered by health insurance. Government sponsored insurance scheme is the main type of health insurance for population who are covered by health insurance. (Table 4.2.2(a))
- Average out of pocket expenditure for hospitalization cases is more in urban population than rural population across all quintiles. In terms of medical expenditure, OOPME for treatment per hospitalization case during stay at hospital over last 365 days is higher in private hospital as compared to Govt./Public hospital and Charitable Trust/NGO run hospital for both rural and urban population. (Table 4.2.3.3(b))
- Households' average medical expenditure by type of health care service provider is higher for private hospital than other categories for both hospitalization and non-hospitalization cases. (Table 4.2.3.1(a) & 4.2.4.1)
- The per capita expenditure on CGHS during 2019-20 was Rs 11331. (Table 4.3.1)
- As of 31st March 2019, around 13.56 crores of beneficiaries were covered under ESIS. The per capita expenditure on medical benefit under ESIS is Rs. 646 for the year 2019. (Table 4.3.2, Table 4.3.3).

Explanatory notes

4.1. Public health expenditure on Health

Budget Estimates (BE): The 'Budget Estimate' for any ministry or scheme is the amount allocated to it in the budget papers for the following year. For instance, in the budget speech in February 2020, the Finance Minister presented budget estimates for expenditures under various heads for the financial year 2020-21 which runs from April 2020 to March 2021.

Revised Estimates (RE): Once the financial year gets underway, some Ministries may need more funds than was actually allocated to them under the Budget Estimates. The government approaches parliament with such supplementary requests for funds during the course of the financial year (in the monsoon or winter session). These supplementary demands are reflected in the Revised Estimates for the current year (2020-21). Thus, along with Budget Estimates for 2021-22, the Finance Minister presents the Revised Estimates for 2020-21.

Actuals: Actual expenditures are the final amounts spent under different heads and may exceed (or fall short of) the Revised Estimates. Since the actual expenditure can only be assessed once the financial year is over and final accounts have been prepared, the Actual expenditures presented in the budget papers are for the earlier financial year i.e. for the year 2019-20.

The three main categories of public expenditure on health are Medical and Public Health, Family Welfare and Others. These are explained below.

4.1.1. Medical & Public Health

Medical and Public Health under the Department of Health deals with health care, including awareness campaigns, immunization campaigns, preventive medicine, and public health. This includes the following 7 categories.

- a. Urban Health Services- Allopathy which includes Direction and Administration, Employees State Insurance Scheme, Central Government Health Scheme, Medical Stores Depots, Departmental Drug Manufacture, School Health Scheme, Hospital and Dispensaries, Other Health Schemes, Other expenditure.
- b. Rural Health Services- Allopathy which includes Health Sub-centres, Subsidiary Health Centres, Primary Health Centres, Community Health Centres, Hospitals and Dispensaries, Other Expenditure.
- c. Urban and Rural Health Services- Other systems of medicine which includes Ayurveda, Homeopathy, Unani, Siddha, Other Systems
- d. Medical Education Research and Training which includes expenditure on medical research and training institutions such as J.I.P.M.E.R, Lady Hardinge Medical College etc.
- e. Public Health which includes Direction and Administration, Training, Prevention and Control of diseases, Prevention of food adulteration, Drug Control, Manufacture of Sera/Vaccine, Public Health Laboratories, Public Health Education, Public Health Publicity, Other Systems, Other Expenditure.
- f. General which includes Health Statistics & Evaluation, International Co-operation, Other expenditure.
- g. Deduct Recoveries which includes receipts by way of recoveries which are to be adjusted against overall expenditure.

4.1.2. Family Welfare

The Department of Family Welfare (FW) is responsible for aspects relating to Family Welfare, especially in reproductive health, maternal health, paediatrics, information, education and communications; cooperation with NGOs and international aid groups; and rural health services. Family Welfare includes Direction and Administration, Training, Research and Evaluation, Rural Family Welfare Services, Urban Family Welfare Services, Maternity and Child Health, Transport, Compensation, Mass Education, Selected area Programmes (including India population project), Reproductive and Child Health Programme, Assistance to Public Sector and other undertakings, Assistance to Local Bodies, Other Services and Supplies, International Co-operation, Other Expenditure.

4.1.3. Others

For Central Government, it includes Medical reimbursement/ Medical Treatment expenditure, Other departments expenditure within the health demand, Secretariat Social Service Expenditure (2251), and medical expenditure by Ministry of Defence, Labour & Employment, Railways, Science and Technology, Mines and Post. For State Governments this definition would exclude medical expenditure by Ministry of Defence, Labour & Employment, Railways, Science and Technology, Mines and Post.

Apart from the above 3 categories of public expenditure, we further define the components of National Health Mission, one of the main programmes of the government. It includes the following 8 components:

- a. NRHM-RCH Flexible Pool which includes: RCH Flexible Pool, Routine Immunisation, Pulse Polio Immunisation, Iodine Deficiency Disorder Control Programme
- b. Health System Strengthening under NRHM
- c. National Urban Health Mission - Flexible Pool
- d. Flexible Pool for Communicable Diseases which includes National Vector Borne Disease Control Program, National T.B. Control Programme, National Leprosy Eradication Programme, Integrated Disease Surveillance Programme
- e. Flexible Pool for Non-Communicable Diseases, Injury & Trauma which includes National Programme for Control of Blindness, National Mental Health Programme, Health Care for the Elderly, National Programme for Prevention & Control of Deafness, National Tobacco Control Programme, National Oral Health Programme, Assistance to States for Capacity Building, National Programme for Prevention and Control of Cancer, Diabetes, CVD and Stroke, Other New Initiatives under Non-Communicable Diseases.
- f. Miscellaneous Programmes which includes (1) Forward Linkages to NRHM and (2) Pilot Projects which includes Sports Medicine, Deafness, Leptospirosis Control, Control of Human Rabies, Medical Rehabilitation, Oral Health, Fluorosis
- g. Human Resources for Health
- h. Finally, Empowered Action Group (EAG) of States refers to the eight states of Bihar, Jharkhand, Rajasthan, Madhya Pradesh, Chhattisgarh, Odisha, Uttar Pradesh, Uttarakhand which are relatively populous resulting in challenges in socio-economic development.

4.2. Average medical expenditure

4.2.1 In-patient hospitalisation: major source of financing of expenditure – Households having persons who had been admitted to hospital during the last 365 days were asked about the major source of finance to meet the hospitalisation expenses. The responses were classified into five categories, namely, (i) household income/savings, (ii) borrowings, (iii) sale of physical assets, (iv) contribution from friends and relatives, and (v) other sources.

4.2.2. In-patient hospitalization: Population covered by Health Insurance – For every member of each surveyed household, it was ascertained whether the person was covered by any scheme for health expenditure support. If so, the broad category of scheme was also recorded. The categories were: (i) Government-sponsored (e.g. RSBY, AarogyaSri, etc.), (ii) Government/PSU as an employer (e.g. CGHS, reimbursement from govt. etc.), (iii) Employer- supported (other than govt./PSU) health protection (e.g. ESIS), (iv) Insurance arranged by household with insurance companies, and (v) Other schemes.

4.2.3. Expenditure on Hospitalization in a 365-day period – Average medical expenditure incurred during stay at hospital per case of hospitalisation (excluding childbirth) by different type of medical institution, quintile class of household consumer expenditure and social groups separately for each gender and sector, rural-urban variation, break-up of average medical expenditure, by different category of ailment and average out-of-pocket medical expenditure (OOPME).

4.2.4. Expenditure on non-hospitalisation in a 15-day period – Average medical expenditure incurred per spell of ailment not involving admission to hospital, separately for five health care service providers, namely, Government/public hospitals, charitable/NGO/trust-run hospitals, private hospitals, private

doctors or clinics, and informal healthcare providers and different quintile class of household consumer expenditure, separately for each gender and sector, break-up of average expenditure on treatment (non-hospitalisation cases) across different systems of medicine, average medical expenditure on treatment (non-hospitalisation cases) by its components and rural-urban variation in the average out-of-pocket medical expenditure (OOPME) on treatment (non-hospitalisation cases) by each type of healthcare service provider, separately for each gender.

4.2.5. Expenditure on hospitalisation cases for childbirths – Average expenditure incurred for hospitalised childbirth by type of delivery, : normal, caesarean and others at Government/Public hospital or Private hospital (including Charitable/Trust/NGO-run hospital) during last 365 days, separately for each sector; average expenditure incurred for hospitalised childbirth by type of medical institution: Government/Public hospital or Private hospital (including Charitable/Trust/NGO-run hospital) for each type of delivery during last 365 days, separately for each quintile class of household consumer expenditure, social groups and sector; average out-of-pocket medical expenditure (OOPME) incurred for hospitalised childbirth by type of medical institution during last 365 days, separately for each quintile class of household consumer expenditure and sector; and average out-of-pocket medical expenditure (OOPME) incurred for hospitalised childbirth by type of medical institution during last 365 days, separately for each quintile class of household consumer expenditure and sector.

4.3. Health Insurance

4.3.1. Family Floater Insurance Policies - Family Floater is one single policy that takes care of the hospitalization expenses of the entire family. The policy has one single sum insured, which can be utilised by any/all insured persons in any proportion or amount subject to maximum of overall limit of the policy sum insured.

4.3.2. Group Insurance Policies - Group insurance policies are those in which a single master policy in the name of a group is issued to the manager of the group. Groups, for this purpose, can be employer-employee groups or non-employer- employee groups as defined by IRDA's group insurance guidelines. (Examples are savings bank account holders of a bank or members of the same social or cultural association etc.)

4. Gross State Domestic Product (GSDP) at Current Prices with base year 2011-12 (as on 28-02-2018) from Central Statistics Office, Ministry of Statistics & Programme Implementation.

Notes

*2015-16 revised estimated figures are given for State Expenditure on Health and Total State Expenditure.

\$ Population for Andhra Pradesh and Telangana are taken from Socio Economic Survey published by Andhra Pradesh and Statistical Year Book 2015 of Telangana respectively.

Total State Expenditure includes Revenue expenditure, Capital Outlay (Development & Non-Development) and Loans and Advances by State Governments (Development purposes & Non-Development purposes).

** EAG+1 States includes Assam,

@ GSDP figures for West Bengal, Dadra & Nagar Haveli, Daman & Diu and Lakshadweep are not available.

^ Major Non EAG States spend 5.34% of total state expenditure on health., & The ratio of public expenditure on health to GSDP is computed by taking 2015-16 (RE) of public expenditure on health and 2015-16 (Actuals) of GSDP.

Source: "Health in India – 2018, NSS 75th Round", Ministry of Statistics & Programme Implementation

Note

1. Expenditure, in a case of hospitalisation, was calculated including bed charges, doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during stay at the hospital (within the reference period of last 365 days)
2. Expenses on transportation of the patient to or from the hospital were excluded, and so was expenditure on food.
3. Expenditure excludes childbirths.
4. Government/Public institutions include HSC/PHC/CHC/mobile medical unit, Public hospitals, etc.
5. Average medical expenditure for treatment per hospitalisation (excluding childbirth) during last 365 days for each State/UT is given in Statement 13 of Summary Statement.

Table 4.2.3.1 (b) shows rural and urban variation in the average medical, non-medical and total expenditure incurred during stay at hospital per case of hospitalisation (excluding childbirth), separately for each quintile class of household consumer expenditure.

4.2.3.1 (b) : Average medical and other related non-medical expenditure (Rs.) for treatment per hospitalization case during stay at hospital over last 365 days (All India)

Quintile class of household consumer expenditure	average medical and non-medical expenditure (Rs.) per hospitalization case

Note

1. Expenditure, in a case of hospitalisation, was calculated including bed charges, doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during stay at the hospital (within the reference period of last 365 days)
2. Expenditure excludes childbirths.
3. Average medical, non-medical and total expenditure for treatment per hospitalisation (excluding childbirth) during last 365 days for each gender and State/UT is given in Statement 14 of Summary Statement.
4. The quintile class of household consumer expenditure is based on information collected on households' usual monthly consumption expenditures, consumption from home produce, wages in kind and free collection, expenditure on durables in a year, and household size. The classes are formed separately for rural and urban India, so as to contain approximately 20% each of all-India rural/urban population.

Table 4.2.3.1 (c) shows rural and urban variation in the break-up of average medical expenditure incurred during stay at hospital per case of hospitalisation (excluding childbirth) by category of expenditure, separately for each medical institution and quintile class of household consumer expenditure.

4.2.3.1 (c) : Components of average medical expenditure (Rs.) (excluding childbirth) by medical institution and quintile class of household consumer expenditure during last 365 days (all-India)

Note

1. Expenditure, in a case of hospitalisation, was calculated including bed charges, doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during stay at the hospital (within the reference period of last 365 days)
2. Expenses on transportation of the patient to or from the hospital were excluded, and so was expenditure on food.
3. Expenditure excludes childbirths.
4. Other ailments include burns and corrosions, poisoning, intentional self-harm, assault, contact with venomous/harm-causing animals and plants, etc.
5. Average medical expenditure for treatment per hospitalisation (excluding childbirth) during last 365 days for each medical institution and State/UT is given in Statement 13 of Summary Statement.

4.2.3.3. Average out of pocket expenditure

Figure 4.9 and Table 4.2.3.3 (a) show rural and urban variation in the average out-of-pocket medical expenditure (OOPME) incurred during stay at hospital per case of hospitalisation (excluding childbirth) by different quintile class of household consumer expenditure, separately for each type of medical institution. Table 4.2.3.3 (b) shows state-wise distribution of average out-of-pocket expenditure for hospitalization for urban and rural population.

Source: "Health in India - 2018, NSS 75th Round", Ministry of Statistics & Programme Implementation

4.2.3.3 (a) : Average out-of-pocket medical expenditure (OOPME) (Rs.) for treatment per hospitalization case during stay at hospital over last 365 days (All India)

Note

1. Expenditure, in a case of hospitalisation, was calculated including bed charges, doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during stay at the hospital (within the reference period of last 365 days) – whether made available by the hospital or procured from outside.
2. Expenses on transportation of the patient to or from the hospital were excluded, and so was expenditure on food.
3. Expenditure excludes childbirths.
4. Out-of-pocket medical expenditure is the difference between total medical expenditure and reimbursement for treatment per hospitalisation case during last 365 days.
5. Average out-of-pocket medical expenditure for treatment per hospitalisation (excluding childbirth) during last 365 days for each medical institution, gender and State/UT is given in Statement 15 of Summary Statement.

4.2.3.3 (b) : Average out-of-pocket medical expenditure (OOPME) per hospitalisation case (excluding childbirth) for treatment during stay at hospital (as inpatient) in last 365 days by type of hospital for each State/UT (Rural)

4.2.4. Expenditure on non-hospitalisation in a 15-day period

4.2.4.1. Average medical expenditure (non-hospitalisation cases) by type of health care service provider and quintile class of household expenditure

Table 4.2.4.1. shows average medical expenditure incurred per spell of ailment not involving admission to hospital, separately for five health care service providers, namely, Government/public hospitals, charitable/NGO/trust-run hospitals, private hospitals, private doctors or clinics, and informal healthcare providers and different quintile class of household consumer expenditure, separately for each gender and sector.

4.2.4.1.: Average medical expenditure (Rs.) for (non-hospitalized) treatment per treated spell of ailment during last 15 days (All India)

Characteristics	average medical expenditure (Rs.) per treated spell of ailment

Source: "Health in India – 2018, NSS 75th Round", Ministry of Statistics & Programme Implementation

Note

1. Expenditure, in a case of non-hospitalisation, was calculated including doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during within the reference period of last 15 days.
2. Expenses on transportation of the patient to or from the hospital were excluded, and so was expenditure on food.
3. Average medical expenditure for non-hospitalised treatment per treated spell of ailment during last 15 days for each healthcare service provider and State/UT is given in Statement 17 of Summary Statement.
4. The quintile class of household consumer expenditure is based on information collected on households' usual monthly consumption expenditures, consumption from home produce, wages in kind and free collection, expenditure on durables in a year, and household size. The classes are formed separately for rural and urban India, so as to contain approximately 20% each of all-India rural/urban population.

4.2.4.2. Average medical expenditure (non-hospitalisation cases) by treatment seeking behaviour

Table 4.2.4.2. give break-up of average expenditure on treatment (non- hospitalisation cases) across different systems of medicine: allopathy, Indian system of medicine, homeopathy, and yoga & naturopathy, other sources by quintile class of household consumer expenditure, separately for each sector.

4.2.4.2.: Average medical expenditure (Rs.) for (non-hospitalized) treatment per treated spell of ailment during last 15 days by nature of treatment (All India)

Note

1. Expenditure, in a case of non-hospitalisation, was calculated including doctor's/surgeon's fees, total amount paid for medicines, diagnostic tests, attendant charges, physiotherapy, personal medical appliances, and blood, oxygen, etc. during within the reference period of last 15 days.
2. Expenses on transportation of the patient to or from the hospital were excluded, and so was expenditure on food.
3. Out-of-pocket medical expenditure is the difference between total medical expenditure and reimbursement for non- hospitalised cases per treated spell of ailment during last 15 days.
4. Average out-of-pocket medical expenditure for non-hospitalised treatment per treated spell of ailment during last 15 days for each health care service provider and State/UT is given in Statement 19 of Summary Statement.
5. The quintile class of household consumer expenditure is based on information collected on households' usual monthly consumption expenditures, consumption from home produce, wages in kind and free collection, expenditure on durables in a year, and household size. The classes are formed separately for rural and urban India, so as to contain approximately 20% each of all-India rural/urban population.

4.2.5. Expenditure on hospitalisation cases for childbirths

4.2.5.1. Expenditure on childbirth, by type of delivery and type of medical institution

Table 4.2.5.1. Average expenditure incurred for hospitalised childbirth by type of medical institution: Government/Public hospital or Private hospital (including Charitable/Trust/NGO-run hospital) for each type of delivery during last 365 days, separately for each quintile class of household consumer expenditure, social groups and sector.

4.2.5.1.: Average expenditure (Rs.) per childbirth (excluding abortion cases) over last 365 days by place of delivery (All India)

4.3. Health Coverage and Insurance

A. Government Health Schemes

Central Government Health Scheme

Overview of the CGHS

The Central Government Health Scheme (CGHS) is a health scheme mainly for serving / retired Central Government employees and their families. The scheme was started in 1954 in Delhi and was intended to be only for serving Central Government Employees, who had difficulty in getting reimbursement of expenses on OPD medicines. This was initially not envisaged to be an all India Scheme. Now, The Scheme was extended to other Cities. 72 Cities through 329 Allopathic Wellness Centres and 86 AYUSH Centres / Units. It serves 12,50,515 Primary Cardholders and 36,69,224 beneficiaries (as on 04.08.2020).

CGHS has empanelled 1403 Hospitals (including Eye Care and Dental Clinics) and 272 Diagnostic Centres in different CGHS Cities.

Salient Features of CGHS

- CGHS provides comprehensive OPD facilities and Medicines through its large network of Wellness Centres, Polyclinics and Labs.
- CGHS has empanelled private hospitals and diagnostic centres in different cities for carrying out investigations and indoor treatment facilities.
- CGHS provides specialist consultation through CGHS Specialists at Poly Clinics, Central Government Hospitals, GDMOs with Specialist qualifications also provide specialist advice. In addition, CGHS refers the beneficiaries to Specialists of empanelled hospitals for expert consultation.
- In case of elderly CGHS beneficiaries aged 75 years and above they may consult Specialists of empanelled hospitals without referral from CGHS.
- Medicines are issued against the prescription of CGHS doctors and other Government doctors and as per the prescribed formulary and are supplied from the dispensary store. The medicines not available in the dispensary are procured through Authorized Local Chemist and provided to patients.
- Suggestions, representations and complaints on various aspects of the functioning of this Scheme, are used as feedback for the initiatives to be taken to improve the functioning of CGHS, which have yielded positive results.

Eligibility for joining CGHS

- All Central Government Employees drawing their salary from Central Civil Estimates and their dependent family members residing in CGHS covered areas.
- Central Government Pensioners receiving pension from Central Civil Estimates and their eligible family members.
- Hon'ble Members of Parliament.
- Ex-Members of Parliament.
- Ex-Governors and Lt. Governors.
- Freedom Fighters.
- Ex- Vice Presidents.
- Sitting and Retired Judges of the Supreme Court.
- Retired Judges of High Courts.
- Employees and Pensioners of certain autonomous / statutory bodies which have been extended CGHS facilities in Delhi.
- Journalists accredited with PIB (in Delhi)
- Delhi Police Personnel residing in Delhi.
- Railway Board Employees.
- Central Government Servants absorbed in Central Public Sector Undertaking / Statutory Bodies / Autonomous Bodies, and are in receipt of pro-rata pension from Central Civil Estimates.

Initiatives taken by the Government in the last few years to improve the services of CGHS to its Beneficiaries

- The requirement for Referral / Permission For Diagnostic Tests / Investigations / Specific Treatment Procedures with CGHS rates has been done away with in respect of such tests and procedures for which there is a prescribed rate list. A Government Specialist / medical officer of CGHS Wellness Centres advise such listed test / listed treatment and CGHS beneficiaries can get the investigation / treatment done at CGHS rates from any of the CGHS empanelled diagnostic labs / hospitals.
- Introduction of Biometric System for recording attendance in CGHS to ensure punctuality.
- Provision to undergo Haemodialysis from any Centre, including non-empanelled with prior permission.
- 'SMS' alert system on issue of medicines to CGHS beneficiaries on the Mobile Phone – to act as deterrent against pilferage of medicines by unscrupulous elements.
- 'SMS' alert on issue of permission letter to CGHS pensioner beneficiaries on issue of permission letter through computers.
- Delivery of Life Saving Medicine at CGHS Wellness Centres at Noida, Faridabad, Ghaziabad and Gurgaon of NCR region obviating the necessity to travel long distance to CGHS, MSD, Gole Market, New Delhi.
- Option to avail Medicine from any CGHS Wellness Centre.
- Self-Printing of CGHS Cards by registered CGHS beneficiaries using their user name and password.
- Introduction of Nomination Facility

Nomination facility has been introduced in CGHS, A pensioner beneficiary can now nominate any person from his family, or outside to claim reimbursement of Medical Expenses in case of his unfortunate death.

CGHS Contribution - Monthly Contribution for availing CGHS facility ranges from Rs. 250/- to Rs. 1000/- depending on the level in the Pay Matrix as per 7th CPC.

4.3.1 Per capita expenditure on CGHS

Year	Total expenditure (in Crores of Rs.)	No. of beneficiaries (in Crores)	Per Capita Expenditure (in Rs.)
2010-11	1296	0.32	4050
2011-12	1562	0.34	4594
2012-13	1691	0.36	4697
2013-14	1839	0.37	4970

Employees' State Insurance Scheme (ESIS)

The Employees' State Insurance Act, 1948 envisaged an integrated need based social insurance scheme that would protect the interests of workers in contingencies such as sickness, maternity, temporary or permanent physical disablement, and death due to employment, injury resulting in loss of wages or earning capacity. The Act also guarantees medical care to workers and their immediate dependents.

ESIS is a contributory scheme on the patterns of social health insurance. The existing wage limit for coverage under the Act is Rs. 21,000/- per month (w.e.f. 01/01/2017).

The scheme is being implemented in all the States except, Arunachal Pradesh and Lakshadweep. It is also implemented in Delhi and Chandigarh.

Medical benefit is one part of the benefits under ESIS which also includes other benefits for sickness, maternity, disablement etc. Full medical care is provided to an insured person and his family members from the day he enters insurable employment. There is no ceiling on expenditure on the treatment of an insured person or his family member, and treatment can be availed at primary, secondary and tertiary levels. Medical care is also provided to retired and permanently disabled insured persons and their spouses on payment of a token annual premium of Rs.120 only.

4.3.2: Coverage of beneficiaries of ESIC

Details	Coverage (As on 31 st March, 2019)
No. of Insured Person family units	3.49 crores
No. of Employees covered	3.14 crores
Total No. of Beneficiaries	13.56 crores

Source: Employee State Insurance Corporation

4.3.3: Trends in coverage, income and expenditure on ESIS

Year	Expenditure on Medical benefit (in Rs. Crores)	No. of Beneficiaries (in Crores)	Per Capita Expenditure on Medical Benefit (in Rs)
2009	1272.83	5.02	254
2010	1778.61	5.55	320

Rashtriya Swasthya Bima Yojana (RSBY)

Rashtriya Swasthya Bima Yojana (RSBY) was a centrally sponsored scheme to provide health insurance cover of Rupees 30,000/- per family per annum on family floater basis (maximum 5 members per family) to Below Poverty Line (BPL) families and 11 other categories of Unorganized Workers i.e MGNREGA Workers, Construction Workers, Domestic workers, Sanitation Workers, Mine Workers, licensed Railway Porters, Street Vendors, Beedi Workers, Rickshaw Pullers, Rag Pickers, and Auto/Taxi drivers. The Scheme was launched by Ministry of Labour and employment in 2008 and transferred to Ministry of Health & Family Welfare on “as is where is” basis with effect from 01.04.2015.

Each family enrolled in the scheme was entitled to hospitalization benefits of up to Rs. 30,000 per annum in Government as well as empanelled private hospitals. 1516 treatment packages were covered under RSBY. A network of more than eight thousand hospitals was developed by empanelling 4860 private hospitals and 3677 public hospitals under RSBY scheme. Before the launch of Pradhan Mantri Jan Arogya Yojana (PMJAY), around 2.75 crore families were covered under the scheme. With the launch of PMJAY on 23.09.2018, RSBY was subsumed in it. The Central Share released to States/UTs under RSBY over the years is as under.

Financial year	Central Share released to States/UTs (Rupees in Crore)
2008-09	99.94
2009-10	262.51
2010-11	509.17

Ayushman Bharat – Pradhan Mantri Jan Arogya Yojana (AB-PMJAY)

The Ayushman Bharat – Pradhan Mantri Jan Arogya Yojana (AB PM-JAY) is the flagship scheme of Government of India that provides a health cover of up to Rs. 5 Lakhs per family per year, for secondary and tertiary hospitalizations to over 10.74 Crore poor and vulnerable families (approximately 50 Crore people). Launched on 23rd September, 2018 PM-JAY has been designed to provide financial risk protection against catastrophic health expenditure that impoverishes an estimated 6 Crore people every year.

The number of beneficiaries registered under AB PM-JAY stands at over 12.5 Crore. Over 23,000 hospitals have been empanelled in the scheme till date. This has facilitated over 1.2 Crore hospitalizations, saving beneficiaries over Rs. 15000 Crore in out of pocket medical expenditure.

Benefits

- Health cover of up to Rs. 5,00,000 per family per year, for secondary and tertiary care hospitalization
- Cashless access to hospitalization services
- No cap on family size, age or gender
- All pre-existing conditions are covered
- Benefits are portable across the country in all empanelled hospitals
- 1,592 procedures covering treatment, food, drugs and supplies, and diagnostics services
- PM-JAY covers cost of hospitalization, treatment, up to 3 days of pre-hospitalization and 15 days of post hospitalization follow-up care

Coverage

Over 10.74 crore poor and vulnerable families (or 50 crore people) are covered as per specific deprivation criteria identified under the Socio-Economic Caste Census (SECC), 2011.

As on end of August 2020 the total number of beneficiaries registered across platforms used in the AB PM-JAY stands in excess of 12.5 Crores.

Mode of Implementation

Various States are using different models for implementing their own health insurance/ assurance schemes. Some of them are using the services of insurance companies while others are directly implementing the schemes in their States.

Considering the fact that States are at different levels of preparedness and have varying capacity to manage such schemes, PM-JAY provides the States with the flexibility to choose their implementation model. They can implement scheme through assurance/trust model, insurance model or mixed model.

Assurance Model/Trust Model

This is the most common implementation model adopted by most of the States. Under this model, the scheme is directly implemented by the State Health Agency (SHA) without the intermediation of the insurance company. The financial risk of implementing the scheme is borne by the State Government in this model. State Health Agency essentially reimburses health care providers directly. Even though no insurance company is involved, the SHA employ the services of an Implementation Support Agency (ISA) for claim management and related activities.

Insurance Model

In the insurance model, the SHA competitively selects an insurance company through a tendering process to manage PM-JAY in the State. Based on market determined premium, SHA pays premium to the insurance company per eligible family for the policy period and insurance company, in turn, does the claims settlement and payments to the service provider. The financial risk for implementing the scheme is also borne by the insurance company in this model.

Mixed Model

Under this, the SHA engages both the assurance/ trust and insurance models mentioned above in various capacities with the aim of being more economic, efficient, providing flexibility and allowing convergence with the State scheme. This model is usually employed by brownfield States which had existing schemes covering a larger group of beneficiaries.

Budget Provision

PM-JAY, being centrally sponsored scheme is fully funded from the consolidated fund of India and the budget allocated is received from Government of India as recurring grant-in-aid. The budget allocation for the fiscal year 2019-20 was Rs. 6,400 Crore and Amount Expended was Rs. 3129.09 Crore. The budget allocation for the fiscal year 2020-21 is Rs. 6,400.00 Crore. The annual maximum budgetary ceiling for the fiscal years 2018-19 and 2019-20 is Rs. 1,102/- per

family, which has two components; Rs. 50/- towards Administrative Expenses and Rs. 1,052/- towards Grant-in-Aid for implementation purpose.

Sharing Pattern Ratio

The expenditure under PM-JAY is shared between Central Government and State Government/ Union Territory as per the extant financial sharing formula issued by the Ministry of Finance. This sharing ratio is as under.

- For North Eastern and 3 Himalayan States: 90 (CG): 10 (SG)
- For Union Territories with Legislation and Other States: 60 (CG): 40 (SG)
- For Union Territories without Legislation: 100 (CG)

Under Insurance Mode: The lowest premium discovered upon open tendering done by the State Government shall be shared in the ratio as specified in para above, subject to maximum budgetary ceiling for the Central Government's Share of Premium, whichever is less.

Under Trust Mode: The actual cost of treatment cost incurred for the treatment of beneficiary shall be shared in the ratio as specified in para above, subject to maximum budgetary ceiling for the Central Government's Share of Grant-in-Aid, whichever is less.

Under Mixed Mode: The lowest premium discovered upon open tendering done by the State Government together with the actual cost of treatment cost incurred in assurance mode for the treatment of beneficiary shall be shared in the ratio as specified in para above, subject to maximum budgetary ceiling for the Central Government's Share of Grant-in-Aid, whichever is less.

Implementation Status

32 States and Union Territories have started formally implementing PM-JAY. Three States – Delhi, Odisha and Telangana are yet to sign the MoU, while West Bengal has withdrawn from the scheme.

Key Initiatives Undertaken in PM-JAY

1. **COVID-19 related intervention:** COVID-19 testing and treatment have been made free for AB PM-JAY beneficiary. Further, NHA took initiative of dissemination of information on COVID-19 precautionary measures to the AB PM-JAY beneficiaries, especially senior citizens or those having any co-morbidity or related conditions. All such beneficiaries were contacted, and their well-being was monitored. A total of 7.74 Lakh calls were made to such beneficiaries.
2. **Anti-Fraud Initiatives:** The National Anti-Fraud Unit (NAFU) along with the State Anti-Fraud Units (SAFUs) undertook various measures to strengthen the integrity service providers across the operational framework of the AB PM-JAY. A total of 171 hospitals were de-empanelled as a result of audits undertaken by NAFU and SAFU. Additionally, the NHA has partnered with SAS, a globally renowned advanced analytics solutions provider to develop a comprehensive Fraud Analytics Control and Tracking System (FACTS) to proactively detect fraud, suspect transactions, service providers and beneficiaries.
3. **Quality Assurance:** A quality certification process was developed for the empanelled hospitals to drive the adoption of standards that can positively impact the beneficiary experience under the AB PM-JAY. A total of 161 empanelled hospitals have been certified under this process, across various quality tiers.
4. **Health Benefits Packages:** An exercise was undertaken in 2019 for restructuring and rationalization of the health benefit packages (HBP) where every stakeholder's concern was addressed. The newly drafted HBP 2.0 has 874 treatment packages consisting of 1592 procedures providing a much larger access to various treatments and a scientific integration of implants/high end consumables within the packages.
5. AB PM-JAY being selected for the highest honour for any e-governance/IT initiative in India – the prestigious National e-Governance Award – Gold for the year 2019-20
6. AB PM-JAY Mobile app winning the 10th mBillionth Award South Asia
7. **Launched of IMPACT Portal** to feature KPI based measurement and monitoring of operational efficiency for ICs, ISAs and TPAs.
8. **Towards beneficiary awareness and IEC**
 - a. Launch of Hindi Website: www.pmjay.gov.in/hi as it makes easier for the bottom 40% population of the country
 - b. Commemorative E-card: on the occasion of 1 Crore hospital admission, special edition of E-card exhibiting the milestone of 1crore hospital admissions is being launched
 - c. Public Dashboard: <http://dashboard.pmjay.gov.in>, The dashboard is aimed at enabling availability of data pertaining to Ayushman Bharat – Pradhan Mantri Jan Arogya Yojana in public domain to increase transparency in the functioning of PM-JAY and also open avenues for many more innovative uses of PM-JAY Data to give different perspective
 - d. Hospital Performance Dashboard: <http://dashboard.pmjay.gov.in>, the dashboard shall give detailed information about Hospitals, e-Cards, Admissions, Claims and more, pertaining to PM-JAY. It shall have geographical as well as specialty wise view to give detailed insights on transactions. This dashboard shall be highly valuable for research & development and analysis purposes as well.
 - e. Hospital Ranking Dashboard: <https://hospitalrating.pmjay.gov.in/ratingdashboard/>, It is a revolutionary step to rank empanelled Hospitals on the basis of beneficiaries' feedback which would help the National Health Authority & AB PM-JAY to initiate & execute appropriate decisions for enhancing the quality

measures and indicators of healthcare delivery across all empanelled facilities which will improve the beneficiary's experience.

- f. ASK AYUSHMAN Chat Bot a 24*7 available friend cum assistant has been launched. This Chatbot is built using latest technology of Artificial Intelligence and it is developed to provide more personalized experience for its users. It can be universally used on platforms AB PM-JAY website, Facebook and LinkedIn
- g. Hon'ble Prime Minister interacted with 1Crore'th beneficiary Ms. Pooja Thapa: Hon'ble PM called the one Crore'th beneficiary Ms. Pooja Thapa and shared about one crore hospital admissions achievement through his social media. Here is the link to listen to their dialogue: <https://soundcloud.com/narendramodi/pm-interacts-with-ayushman-bharat-beneficiary>
- h. First Arogya Dhara which was officially launched and presided over by Hon'ble HFM who delivered the keynote address. The webinar was attended by close to 2,500 participants from India and abroad joining virtually. More than 1 lakh people saw the webinar live on social media. It was part of the events organized for marking 1 Crore hospital admissions under the scheme.
- i. Ayushman Bhava: Stories of Joy, Hope and Triumph' Coffee Table Book, was released. It is a collection of 100 stories of Ayushman Bharat PM-JAY beneficiaries from all corners of the country. More than 500 copies of the coffee table book were shared across all the States/UTs, Govt of India officials, Embassies and UN Representatives. It was highly appreciated by the readers
- j. PM-JAY Commemorative Stamp, on completion of one year of implementation of Ayushman Bharat PM-JAY, a commemorative stamp was designed in collaboration with Department of Post. The stamp was released during the valedictory function of Arogya Manthan by Hon'ble PM
- k. Arogya Manthan, on completion of one year of implementation of Ayushman Bharat PM-JAY, a two-day event was organized. Arogya Manthan was inaugurated by Hon'ble HFM and the valedictory session was presided over by Hon'ble PM. The two days of Arogya Manthan hosted various panel discussions and working group presentations on the topics related to implementation of Ayushman Bharat PM-JAY Scheme

Other Central Schemes of the Ministry of Health and Family Welfare

a) Health minister's discretionary grant (HMDG)

Financial assistance up to a maximum of Rs. 1.25 lakh is provided to the indigent patients from the Health Minister's Discretionary Grant (HMDG) to defray a part of the expenditure on hospitalization / treatment in Government hospitals for life threatening diseases covered under Umbrella Scheme of Rashtriya Arogya Nidhi, in cases where free medical facilities are not available. The assistance is provided for treatment of life-threatening diseases like Cancer, and that of Kidney, Liver, Heart, Rare Disease etc. During the financial year 2019-20, financial assistance totalling Rs.3.50 crore was released for treatment of 318 patients.

b) Umbrella scheme of Rashtriya Arogya Nidhi

Under the Umbrella Scheme of Rashtriya Arogya Nidhi, financial assistance up to Rs.15.00 lakh is provided as one-time grant to poor patients belonging to families living below threshold poverty line, suffering from major life-threatening diseases such as Cancer and that of kidney, liver, heart, Rare Diseases etc. for their hospitalization / treatment in Government hospitals. The Scheme has three components, namely (1) Health Minister's Cancer Patient Fund (HMCPF), (2) Rashtriya Arogya Nidhi (RAN) and (3) Rare Diseases. The objectives of the three components of Umbrella Scheme of Rashtriya Arogya Nidhi are as follows:

- **Health Minister's Cancer Patient Fund** — The Health Minister's Cancer Patient Fund (HMCPF) within the Umbrella scheme of Rashtriya Arogya Nidhi (RAN) has also been set up in 2009. In order to utilize the Health Minister's Cancer Patient fund, the Revolving Fund under RAN, has been established in 27 Regional Cancer Centre (RCCs). The financial assistance to a Cancer Patient up to Rs.5.00 lakh would be processed by the RCC concerned; on whose disposal the revolving fund has been placed. Individual cases, which require assistance to more than Rs.5.00 lakh is to be sent to the Ministry for processing. Revolving Funds have been created in all the 27 Regional Cancer Centres (RCCs) and fund up to Rs.100.00 lakhs will be placed at their disposal. The Revolving Funds will be replenished on fulfilment of conditions regarding submission of utilization certificate and list of beneficiaries.

An amount of Rs.1050.00 lakhs was released to Regional Cancer Centre from Health Minister's Cancer Patient Fund during 2019-20

- **Rashtriya Arogya Nidhi** - Rashtriya Arogya Nidhi was set up under Ministry of Health & Family Welfare in 1997 to provide financial assistance to the patients living below poverty line, who are suffering from life threatening diseases to receive medical treatment in Government Hospital. The financial assistance up to Rs. 5.00 lakhs would be processed by the Hospital concerned; on whose disposal the revolving fund has been placed. Individual cases, which require assistance of more than Rs.5.00 lakh is to be sent to the Ministry for processing. Revolving Funds have been created in all the Government Hospital and fund up to Rs.100.00 lakhs will be placed at their disposal. The Revolving Funds will be replenished on fulfilment of conditions regarding submission of utilization certificate and list of beneficiaries.

In 2019-20, financial assistance totalling or 29,25,38,942/- was released directly to 282 patients under RAN (Central fund) and further, the revolving funds amounting to Rs.1225.00 lakhs have been given to the above hospital / Institutes.

- **Rare Diseases** - To provide financial assistance to poor patients living below threshold poverty line and suffering from specified rare diseases for their treatment at Government hospitals having super specialty facilities. The financial assistance up to Rs.5.00 lakhs would be processed by the Hospital concerned; on whose disposal the revolving fund has been placed. Individual cases, which require assistance of more than Rs.5.00 lakh is to be sent to the Ministry for processing. Revolving Funds have been created in all the Government Hospital and fund up to Rs.100.00 lakhs will be placed at their disposal. The Revolving Funds will be replenished on fulfilment of conditions regarding submission of utilization certificate and list of beneficiaries.

In 2019-20, financial assistance totalling of Rs.30.00 lakhs were released directly to 02 patients under Rare Diseases (Central fund) and further the revolving fund of amount Rs.100.00 lakhs have been given to the above hospital / Institutes.

B) Commercial Insurance Sector

Source: Budget Division of Department of Health, NRHM/NHM, AYUSH, NACO & Health Research

Notes

BE- Budget Estimates, RE - Revised Estimates, Plan and Non Plan expenditures are included in health budget from 2015-16,

**The Details of the 10th Five Year Plan may kindly be seen in NHP-2009 (Page 131-133),

***The figures shown against "Health" exclude Disease Control Programmes which have been subsumed under NRHM from 2005-06 onwards. Plan and non-plan expenditures are combined and included from 2015-16 onwards,

**** A separate New Department of Health Research Created from 2008-09 (Figures include the Budget of ICMR),

***** Since 2012-13 Budget of National Aids Control Organization (NACO) has been separated from the Budget of Health & FW,

***** National Rural Health Mission was launched in 2005-06 and Department of Health & FW were merged.

Table 4.3: Scheme wise Approved Outlay (BE), Revised Estimates (RE) and Actual Expenditure for Health for 2016-17, 2017-18, 2018-19 and 2019-20 (Rs in Crores)

Notes

BE- Budget Estimates, RE - Revised Estimates, Plan and Non Plan expenditures are included in health budget from 2015-16,

*The Details of the 10th Five Year Plan may kindly be seen in NHP-2009 (Page 131-133),

** The figures shown against "Health" exclude Disease Control Programmes which have been subsumed under NRHM from 2005-06 onwards. Plan and non-plan expenditures are combined and included from 2015-16 onwards.

*** A separate New Department of Health Research Created from 2008-09 (Figures include the Budget of ICMR).

**** Since 2012-13 Budget of National Aids Control Organization (NACO) has been separated from the Budget of Health & FW.

***** National Rural Health Mission was launched in 2005-06 and Department of Health & FW were merged.

Notes

BE- Budget Estimates, RE - Revised Estimates, Plan and Non Plan expenditures are included in health budget from 2015-16

* The Details of the 10th Five Year Plan may kindly be seen in NHP-2009 (Page 131-133),

** The figures shown against "Health" exclude Disease Control Programmes which have been subsumed under NRHM from 2005-06 onwards. Plan and non-plan expenditures are combined and included from 2015-16 onwards,

*** A separate New Department of Health Research Created from 2008-09 (Figures include the Budget of ICMR),

**** Since 2012-13 Budget of National Aids Control Organization (NACO) has been separated from the Budget of Health & FW,

***** National Rural Health Mission was launched in 2005-06 and Department of Health & FW were merged.

Specialized Medical, Nursing and
Paramedical Personnel in the
country**

HUMAN RESOURCE FOR HEALTH

Index

5.1 Professional Councils in India

Table No.	Table Name	Source	Page No.
5.1.1	State/UT wise Number of Doctors Possessing Recognized Medical Qualifications (Under I.M.C Act) Registered with State Medical Councils/ Medical Council of India from the year up-to 2010 to 2019 (As on 31 st December of concerned year)	Medical Council of India	342
5.1.2(a)	Year-wise number of Dental Surgeons Registered with Central/State Dental Councils of India 1994-2019	Dental Council of India	344
5.1.2 (b)	State/UT wise Dental surgeons Registered under Central / State Dental Councils of India 2008-2019	Dental Council of India	345
5.1.3	State/UT - Wise Number of Government Allopathic Doctors and Dental Surgeons.	Directorate of State Health Services	347
5.1.4.	State/UT wise AYUSH Registered Practitioners (Doctors) in India as on 1 st January 2018	Ministry of AYUSH	349
5.1.5	State/UT Wise Number of Registered Nurses 31 st December, 2018 & Pharmacists in India 11 th August, 2020	Indian Nursing Council & Pharmacy Council of India	351
5.1.6. (a)	State/ UT wise list of types of Medical courses (MBBS; Post Graduate Diploma/ MD/MS Courses and Super-specialty) available as on 31 st December 2019	Medical Council of India	352
5.1.6. (b)	State/ UT wise No. of seats as per medical courses (MBBS; Post Graduate Diploma/ MD/MS Courses and Super-specialty) available as on 31 st December 2019	Medical Council of India	355

5.2 Health manpower in different service sectors

Table No.	Table Name	Source	Page No.
5.2.1	Rural Health Statistics 2018-19		357
5.2.1.1 (a)	State/UT wise Health Human Resource in Rural Areas (Govt.) in Primary Health Centres and Sub-Health Centre in India as on 31 st March 2019	Bulletin on Rural Health Statistics in India 2019	358
5.2.1.1 (b)	State/UT wise Health Human Resource in Rural Areas (Govt.) in Community Health Centres (CHCs) in India as on 31 st March.2019	Bulletin on Rural Health Statistics in India 2019	360
5.2.1.2 (a)	Health Manpower in Urban Primary Health Centers as on 31 st March 2019	Bulletin on Rural Health Statistics in India 2019	362
5.2.1.2 (b)	Health Manpower in Urban Community Health Centres as on 31 st March 2019	Bulletin on Rural Health Statistics in India 2019	364
5.2.1.3	Doctor and Paramedical staff at District Hospital and Subdistrict / Subdivisional Hospital as on 31 st March 2019	Bulletin on Rural Health Statistics in India 2019	366

Table No.	Table Name	Source	Page No.
5.2.1.4	State / UT wise status of ASHAs as on 31 st March 2019	Bulletin on Rural Health Statistics in India 2019	367
5.2.1.5 (a)	Status of In-position Manpower at Health and Wellness Centres- Sub Centres	Bulletin on Rural Health Statistics in India 2019	368
5.2.1.5 (b)	Status of In-position Manpower at Health and Wellness Centres- PHCs in rural areas	Bulletin on Rural Health Statistics in India 2019	369
5.2.1.5 (c)	Status of In-position Manpower at Health and Wellness Centres- PHCs in Urban areas	Bulletin on Rural Health Statistics in India 2019	371
5.2.2	Human Resources in Health Sector in Railways as on 31 st March, 2020	Ministry of Railways	374
5.2.3	Human Resources in Health Sector in ESI Corporation as on March, 2019	Employees' State Insurance Corporation	375

HUMAN RESOURCE FOR HEALTH

Highlights

Human Resource for Health (HRH) are identified as one of the core building blocks of the health system. They include physicians, nursing professionals, pharmacists, midwives, dentists, allied health professionals, community health workers, social health workers and other health care providers, as well as health management and support personnel – those who may not deliver services directly but are essential for effective health system functioning, including health services managers, medical records and health information technicians, health economists, health supply chain managers, medical secretaries and others.

- HRH focuses on planning, development, performance, management, retention, information, and research on human resources for the health care sector. In recent years, increased awareness of the critical role of HRH in strengthening health system performance and improving population health outcomes has placed the health workforce high on the health agenda.
- India's mandate for Universal Health depends to a great extent on adequate and effective HRH providing primary, secondary and tertiary level of care in both private and public sectors. The size and composition of HRH in India has significantly changed during the last decade.
- The recent health sector reforms in India, particularly since the launch of the National Rural Health Mission, have laid emphasis on strengthening HRH in the public sector system.
- The National Health Policy 2017 recommends that the principle aspect around policy on HRH is embedded in workforce performance within the system and can be further optimized when we have the most appropriate person in terms of both skills and motivation, for the right job in right place, working in the right professional environment with appropriate incentives.
- In the Indian context health workforce information systems have had limitations of reliable and timely data that is integral to effective policy making. HRH data in India is managed by several stakeholders including states and the National Health Mission.
- In last few years several steps have been taken by departments as well as different regulatory bodies to strengthen data, although a lot more systems strengthening is desirable. Availability of quality data helps ensure evidence based informed decision making and effective policy development at all levels. The HRH data comes from the following sources: a) **Registration data of professional bodies**; b) **Health Manpower Data from Different Service Sectors**; c) **Rural Health Statistics**

Key Points

Professional Councils in India

- Among the states Maharashtra (1,83,843 doctors) has the highest number of registered doctors followed by Tamil Nadu (1,44,737 doctors), Karnataka (1,26,567), and Andhra Pradesh (1,02,924)
- For registered dental surgeons, Karnataka has the highest number registered at 43,876, followed by Maharashtra (40,457), Tamil Nadu (25,167) and Andhra Pradesh (21,355).
- Over the years with gaining popularity, there is a steady rise in the total number of registered AYUSH Doctors in India from 7,73,668 in 2017 to 7,99,879 in 2018. Among the AYUSH most are Registered Ayurvedic doctors (55.5%), followed by Registered Homeopathy Doctors (36.7%) in India.
- Overall, in India currently there are 12,2057 seats available for various types of medical courses. Among the number of seats as per different courses, MBBS (80,055 seats) has the highest number of seats across all the States/UT, followed by MD./MS./M.Sc. courses (36,768 seats), DM courses (2214 seats), and M. Ch courses (1935 seats).

Health manpower in different service sectors

- Number of HW (F) / ANM at Sub Centres and PHCs have increased from 219326 in 2018 to 234220 in 2019, which amounts to an increase of about 6.8%.
- The number of allopathic doctors at PHCs has increased from 27567 in 2018 to 29799 in 2019, which is about 8.09% increase.
- For specialist doctors at CHCs in rural areas, the number has decreased marginally from 4074 in 2018 to 3881 in 2019 which is about 4.8%.

5.1 Professional Councils in India

5.1.1 State/UT wise Number of Doctors Possessing Recognised Medical Qualifications (Under I.M.C Act) Registered with State Medical Councils/Medical Council of India from the year up-to 2010 to 2019 (As on 31st December of concerned year)

Notes

1. Ayurveda: Figures in r/o of Andhra Pradesh (2017), Bihar (2016), Chhattisgarh (2017), Rajasthan (2017), Tamil Nadu (2016), Telangana (2017) and West Bengal (2017) has been repeated as the current year information not available.
2. Unani: Figures in r/o states of Andhra Pradesh (2017), Bihar (2016), Chhattisgarh (2017), Rajasthan (2017), Tamil Nadu (2016), Telangana (2017) has been repeated as the current year information not available.
3. Siddha: Figures in r/o states of Tamil Nadu (2017), has been repeated as the current year information not available.
4. Naturopathy: Figures in r/o states of Andhra Pradesh (2017), Bihar (2016), Chhattisgarh (2017), Rajasthan (2017), Tamil Nadu (2016) and Telangana (2017) has been repeated as the current year information not available.
5. Homoeopathy: Figures in r/o states of Andhra Pradesh (2017), Assam (2017), and Punjab (2017) has been repeated as the current year information not available.
6. Figures in r/o Manipur, Mizoram, Sikkim, A&N Islands, D&N Haveli, Daman & Diu, Lakshadweep and Puducherry have been indicated Nil in all streams as there is no separate Board/Council for registration of Practitioners in these States.
7. Figures in r/o States of Meghalaya, Nagaland, Tripura and Chandigarh have been indicated Nil in Ayurveda, Unani, Siddha and Naturopathy as there is no separate Board/Council for registration of Practitioners in these States.
8. [^] The information of Ayurveda, Unani and Siddha for the state of Andhra Pradesh (as on 31.03.2014) and Ayurveda for the State of Bihar (as on 31.03.2016) is updated based on information received from CCH as on 31.03.2016

India, with its kaleidoscopic variety and rich cultural heritage is proud of some unique and indigenous forms of medicine that look at health, disease and causes of disease through a different lens. Best known as 'AYUSH (Ayurveda, Yoga and Naturopathy, Unani, Siddha and Homeopathy), its main focus is on holistic health and well-being of humans. Over the years with gaining popularity, there is a steady rise in the total number of registered AYUSH Doctors in India from 7,73,668 in 2017 to 7,99,879 in 2018. [Refer Table 5.1.4].

Source: Table 5.1.4

AYUSH has Maximum number of Registered Ayurvedic doctors (55.5%), followed by Registered Homeopathy Doctors (36.7%) in India. [Refer Table 5.1.4; Fig 5.5].

5.1.5 State/UT Wise Number of Registered Nurses & Pharmacists In India

Notes

1. ANM: Auxiliary Nurse Midwives, RN & RM: Registered Nurses & Registered Midwives, LHV: Lady Health Visitors, NA: Not Available,
2. Andaman Nicobar is included with Tamil Nadu and Lakshadweep included with Kerala
3. NA - Not Available

Auxiliary Nurse Midwife (ANM) plays very important role in health care delivery system in India and its changing with the times. It is through their activities that people perceive health policies and strategies. It is through them that planners at the upper level gain insights into health problems and needs of the rural people. Considering their status as grass-root level workers in the health organizational hierarchy, a heavy responsibility rest on them. There are total of 8,79,508 ANM serving in the country as on 31.12.2018. [Refer **Table 5.1.5**]. There are 21,17,649 Registered Nurses and Registered Midwives (RN & RM) and 56,644 Lady Health Visitors serving in the country as on 31.12.2018. [Refer **Table 5.1.5**]. There are 12,01,393 registered pharmacists as per the Pharmacy Council of India as on 11.08.2020.[Refer **Table 5.1.5**]

Fig. 5.6 (a) No. of States/UT offering courses (Max = 33)

Source: Table 5.1.6 (a)

In order to ensure that there is sufficiently trained manpower within the health sector it is important for the states to be offer facility for training of new doctors and specialist. As on December 2019, across the country (Refer Table **5.1.6 (a)**) M.B.B.S courses are offered across all the states and UT. When it comes to speciality courses, various types of master's courses (MD./ MS./ M.Sc.) are offered the most across (682 Masters Courses) the states and UT followed by DM (267 courses) and M. Ch (203 courses). Only Karnataka has facility for M.Phil. (3 courses) among all the states, and only Puducherry and Karnataka have various Ph.D. courses facilities (**Refer Fig. 5.6 (a)**)

5.1.6 (b) : State/ UT wise No. of seats as per medical courses (MBBS; Post Graduate Diploma/ MD/MS Courses and Super-speciality) available as on 31st Dec. 2019

Fig. 5.6 (b) State wise total Medical Seats

Source: Table 5.1.6 (b)

Overall, in India currently there are 12,2057 seats available for various types of medical courses (**Refer Table 5.1.6 (b)**). Among the number of seats as per different courses, MBBS (80,055 seats) has the highest number of seats across all the States/UT, followed by MD./MS./M.Sc. courses (36,768 seats), DM courses (2214 seats), and M.Ch courses (1935 seats) (**Refer Table 5.1.6 (b)**). Comparing the states, Karnataka has the highest number of medical seats available across various medical courses (14, 784 seats), followed by Maharashtra (13,763 seats), Tamil Nadu (11,802 seats), and Uttar Pradesh (9573 seats) (**Refer Table 5.1.6 (b); Fig. 5.6 (b)**).

5.2 Health Manpower Data from Different Service Sectors

5.2.1 Rural Health Statistics 2018-19

Rural Health Statistics is an essential tool to carry out comparative analysis and take policy decisions based on informed data. Rural Health Statistics provide data on Rural Health, Urban Health and Tribal Health Components, Health and Wellness Centre and Ayushman Bharat infrastructure and Manpower.

HEALTH INFRASTRUCTURE

Highlights

Health Infrastructure provides communities, states, and the nation the capacity to prevent disease, promote health, and prepare for and respond to both acute (emergency) threats and chronic (ongoing) challenges to health. Health infrastructure is an important indicator for understanding the health care delivery provisions and welfare mechanisms in a country. Infrastructure has been described as the basic support for the delivery of public health activities. Public health infrastructure has been referred to as 'the nerve center of the public health system'. It also signifies the investments and priority accorded to create the infrastructure in public and private sectors. Article 47 of the Constitution mandates improvement in public health, thus government is required to take all measures for this purpose.

- The National Health Mission followed by National Health Policy 2017 lays major thrust on addressing the infrastructural needs and gaps. National Health Policy further recommends strengthening of regulatory role of MOHFW in regulation of clinical establishments and profession & technical educations.
- To understand the Health Infrastructure indicators the section can be subdivided into three categories viz. educational infrastructure, public infrastructure and regulation of clinical establishments.

Key Points: Education Infrastructure

- Medical Education infrastructures have shown rapid growth over past few years with 542 medical colleges (280 government; 262 private), and 81,400 MBBS seats till 2019-20.
- There are 8261 DNB (Diplomate of National Board) seats and 24432 (College of Physicians and Surgeons) seats available across the country. The cumulative PG seats across India are 48031 till Dec 2019.
- At present there are 313 dental colleges out of which 259 colleges have MDS seats. Also, there are 702 AYUSH colleges/ institutes and 46835 admission capacity across.
- Currently there are 1892 institutions for ANM with 55,490 seats for admission, and 6894 institutions with 2,72,519 Nursing seats in the country.

Service Infrastructure

- As on 31st March 2019, there are total of 1,52,794 Sub Centres (SCs) (149590 rural + 3,204 urban), 20,069 Primary Health Centres (PHCs) (16613 rural + 3456 urban), 5,685 Community Health Centres (CHCs) (5,335 rural + 350 urban), 1234 Sub-divisional Hospitals, 756 District Hospitals, and 1415 Mobile Medical Units present across the country. Additionally, there are 3204 FRUs functioning in the country, out of which 95.7% of the FRUs are having Operation Theatre facilities, 96.7% of the FRUs are having functional Labour Room while 75.3% of the FRUs are having Blood Storage/ linkage facility.
- Out of 157411 SCs, 7821 SCs have been converted into Health and Wellness Centres (HWCs) in rural areas and out of 3302 SCs, 98 SCs have been converted into HWCs in urban areas. Further, out of 24855 rural PHCs, 8242 PHCs have been converted into HWCs in rural areas and out of 5190 urban PHCs, 1734 PHCs have been converted into HWCs
- 844 Special Newborn Care Units (SNCU) have been set up in Districts and Medical Colleges, 2421 Newborn Stabilization Units (NBSUs) at level of FRUs and 20,336 New born Care Corners (NBCCs) at delivery points have been operationalized as per continuum of care strategy
- There are 4035 hospitals and 27951 dispensaries to provide Medical care facilities under AYUSH by management as on 1.4.2018

Regulation of Clinical Establishments

- So far, 22186 Clinical establishments as on 02.01.2020 have registered online forming part of digital National register

6.1. Educational Infrastructure

Educational infrastructure provides details of medical colleges, students admitted to M.B.B.S. course, post graduate degree/diploma in medical and dental colleges, admissions to BDS & MDS courses, AYUSH Institutes, nursing and pharmacy courses. Statutory regulatory councils have been established to monitor the standards of medical education, promote medical training and research activities, and oversee the qualifications, registration, and professional conduct of doctors, dentists, nurses, pharmacists, and practitioners of other systems of Medicine such as Ayurveda, Yoga, Unani, Siddha and Homoeopathy.

Important among these laws are: the Indian Medical Council Act, 1956; the Indian Nursing Council Act, 1947; the Indian Medicine Central Council Act, 1970; the Homoeopathy Central Council Act, 1973; and the Pharmacy Act, 1948. Almost all of these laws establish councils that set forth uniform educational and qualification standards. Regulation of Medical professionals already exists under Medical Council of India, Code of Medical Ethics, 2002 and are accessible on the respective websites.

Source: NMC/MCI Website – State Wise list of Medical colleges

Medical Education infrastructures in country have shown rapid growth over past few years. The country has 542 medical colleges of which 280 are government and 262 are private. The total of number of MBBS seats is 81400 till 2019-20. [Refer Table No 6.1.1.1].

Source: Table 6.1.1

From years 1991-92 there has been a steady rise in the number of medical colleges across the country (Figure 6.1). Overall, between 1991 to 2020 there has been a 271% increase in the number of medical colleges (146 in 1991 to 542 in 2020). As with increase in colleges the capacity to train more medical professionals has also considerably risen from 12199 admission capacity in 1991-92 to 81400 in 2019-20 (567% increase) (Refer Figure 6.1; Table 6.1.1)

The Pradhan Mantri Swasthya Suraksha Yojana (PMSSY) aims at correcting the imbalances in the availability of reliable and affordable healthcare facilities in different parts of the country in general, and augmenting facilities for quality medical education in the under-served States in particular. PMSSY, a Central Sector Scheme, has two components: (A) Setting up of AIIMS like institutions and (B) Upgradation of existing Government Medical Colleges/ Institutions and is being taken in phased manner. Total 22 new AIIMS have been announced so far and establishment of six AIIMS has been done in first phase. Academic session for 100 MBBS students and 60 B.Sc. (Nursing) students has been started. The total bed capacity of 6 AIIMS is at present 4671 and is likely to reach sanctioned bed capacity of 5760 during this year. [Refer Table 6.1.1.1 (d)]. In addition to the six (6) AIIMS sanctioned in Phase – I, sixteen (16) more AIIMS have been announced, out of which fifteen (15) AIIMS have been sanctioned/ approved by Cabinet. [Refer Table 6.1.1.1 (e)]

Besides the total of 37338 PG seats (MD/MS/ MCH/DM/Diploma), there are 8261 DNB (Diplomate of National Board) seats which are equivalent to MD/MS and 2432 CPS sheets available [Refer Table 6.1.1.1 (C)]. Thus, cumulative PG seats across India are 48031.

6.1.2 : Number of Dental Colleges & Admissions to BDS and MDS Courses in India from 1994-95 to 2019-20

S. No.	Year	Bachelor of Dental Surgery (BDS)		Master of Dental Surgery (MDS)	
		No. of Dental Colleges	No of Admission	No. of Dental Colleges	No of Admission

An existing facility (District Hospital, Sub-divisional Hospital, Community Health Centre etc.) can be declared as a fully operational First Referral Unit (FRU) only if three critical determinants are present: i) Emergency Obstetric Care including surgical interventions like caesarean sections; ii) newborn care; and iii) blood storage facility on a 24-hour basis. As on 31st March 2019, there are 3204 FRUs functioning in the country. Out of these, 95.7% of the FRUs are having Operation Theatre facilities, 96.7% of the FRUs are having functional Labour Room while 75.3% of the FRUs are having Blood Storage/ linkage facility (Table 6.2.2 (a); Fig 6.5).

3. Regulation of Clinical Establishments

The private sector has a vast range of service providers from the highly competent to the quacks. Healthcare in India suffers from under regulation subjecting the populace to poor quality of treatment, quackery menace and high costs. Also, there is lack of systematic collection of information from the private sectors. This makes it imperative to enforce minimum standards on clinical establishments in both private and public sector.

6.3. Status of Online registration of Clinical Establishments as on 2nd Jan. 2020

Source: Annual Health Report 2019-20, MoHFW

The clinical establishment act 2010, and subsequent notification of National Council for Clinical Establishments and the Clinical Establishments (Central Government) Rules, 2012 is an effort to ensure regulate and accredited health care infrastructure across country. National council for Clinical establishments compiles and publish a National Register of clinical establishments. Online registration at present is functional through website (www.clinicalestablishments.gov.in) in 13 State / UTs. So far, 22186 Clinical establishments as on 02.01.2020 have registered online forming part of digital National register [Refer Table No. 6.3]

CHAPTER SEVENTH

Pandemics

**An Overview of the
Pandemics & Epidemics
in India and Preparedness Status**

EPIDEMICS AND PANDEMICS STATUS AND PREPAREDNESS

Index

7.3.3.4	State wise No of Covid-19 Testing Centers Set up	ICMR Portal	476

EPIDEMICS AND PANDEMICS STATUS AND PREPAREDNESS

Highlights

India has witnessed several epidemics and pandemics since time immemorial. Epidemics like any other natural calamity is neither uncommon nor sudden for any country. According to Park, “epidemics is an unusual occurrence in community or region of disease, specific health related behaviour or other health-related events clearly in excess of expected occurrence. It is a sudden, severe widespread outbreak of disease pre-existing in community.” Pandemic is the form of epidemic that spreads through human population affecting large number of people, major part of a nation, entire nation, a continent, or a part of the entire world. A disease or condition is not a pandemic merely because it is widespread or kills many people; it must also be infectious.

Exploring history of pandemic and epidemics reveals that with each event world has progressed substantially in mitigating many epidemics from time to time owing to the improved public health measures but the occurrence of a future epidemic in a large scale cannot be denied fully. This is because of the changing pattern of infectious diseases and the epidemiological transition. Many controlled diseases are getting re-emerged and new emerging infectious diseases are evolving creating challenge among the global public health intelligence. The recent pandemic of COVID-19 is a wake-up call to the public health realm and development of strategies for mitigating pandemic is a top global public health priority. Proper surveillance is one of the key factors behind mitigating some of the important scourges besides the disease specific strategies.

The frequent incidences of emerging infectious diseases in humans in recent past are alarming for health care preparedness in the near future. These also include infections that appear in new geographic areas or increase abruptly. The new infectious diseases and those which are re-emerging after a period of quiescence are also grouped under emerging infectious diseases. During the past few years, India has witnessed several outbreaks of emerging/ re-emerging viral infections. Annual epidemics of Dengue, Chikungunya, Influenza, Rotavirus, Measles Rubella, Japanese encephalitis etc. are reported from all parts of the country. Besides, in the past two decades, India has witnessed acute outbreaks or threats of infiltration of new or exotic viruses such as Nipah virus (2001; 2007; 2018 & 2019); SARS-CoV (2003); Avian Influenza H5N1 (2006); ECSA strain of chikungunya (2006); pandemic influenza (2009); Zika virus (2016); Ebola, Yellow fever and MERS-CoV (Middle East Respiratory Syndrome-coronavirus) are the other potential viral agents which pose a serious threat to the country. (if all the epidemics are covered like chamki fever, bird flu, swine flu etc.)

Prevention and control of emerging infectious diseases will increasingly require the application of sophisticated epidemiologic and molecular biologic technologies, changes in human behavior, a national policy on early detection of and rapid response to emerging infections and a plan of action. A five-pronged strategy has been adopted in India to include i.e. epidemic preparedness and rapid response; vibrant public health infrastructure; effective risk communication; appropriate research and its utilization; and passionate advocacy for political commitment and partnership building.

Outbreak of COVID -19

Corona Virus Disease 2019 (COVID-19) was declared as pandemic by World Health Organization on March 11th, 2020 mainly due to the speed and scale of the transmission of the disease. Before that, it started as an epidemic in mainland China with focus being firstly reported in the city of Wuhan, Hubei province in 17th Nov 2019. The etiologic agent of COVID -19 was isolated and identified as a novel corona virus, initially designated as 2019-nCov. Later, the virus genome was sequenced and because it was genetically related to coronavirus outbreak responsible for the SARS outbreak of 2003, the virus was named as severe acute respiratory coronavirus -2 (SARS Cov-2) by the international Committee for Taxonomy of Viruses.

On 30th January, India reported its first case of COVID -19 in Kerala, which rose to three cases by 3rd February; all were students returning from Wuhan. Apart from these, no significant rise in transmission was observed in February. On 04th March, 2020, 22 new cases were reported, including 14 infected members of an Italian tourist group. In the month of March, transmission grew after several people with travel history affected countries; and their contacts, tested positive. In the month of March, a 76 year -old man, with a travel history to Saudi – Arabia, became the first COVID-19 fatality in India.

The entire chapter is divided to study and understand the:

1. Historical aspects of the pandemics and epidemics and;
2. Potential threats and upcoming challenges in form of emerging and re-emerging diseases; and
3. The response systems during most recent pandemic (COVID -19) which can guide up on further improving our preparedness for future. (data on COVID -19)

7.1. Historical Aspects of Pandemics and Epidemics

Disease and illnesses have plagued humanity since the earliest days, our mortal flaw. However, it was not until the marked shift to agrarian communities that the scale and spread of these diseases increased dramatically. Widespread trade created new opportunities for human and animal interactions that speed-up such epidemics. Malaria, tuberculosis, leprosy, influenza, smallpox, and others first appeared during these early years. The more civilized humans became – with larger cities, more exotic trade routes, and increased contact with different populations of people, animals, and ecosystems – the more likely pandemics would occur.

7.1.1. Global Pandemic History

Name	Time period	Type/Pre-human host	Death toll
Antonine Plague	165-180	Believed to be either smallpox or measles	5 Million
Japanese smallpox epidemic	735-737	Variola major virus	1 Million
Plague of Justinian	541-542	Yersinia pestis bacteria / Rats, fleas	30-50 Million
Black Death	1347-1351	Yersinia pestis bacteria / Rats, fleas	200 Million
New World Smallpox	1520-onwards	Variola major virus	56 Million
Great Plague of London	1665	Yersinia pestis bacteria / Rats, fleas	1,00,000
Italian plague	1629-1631	Yersinia pestis bacteria / Rats, fleas	1 Million
Cholera Pandemic 1-6	1817-1923	V. cholerae bacteria	1 Million
Third Plague	1885	Yersinia pestis bacteria / Rats, fleas	12 Million (China and India)
Yellow Fever	Late 1800s	Virus / Mosquitoes	100,000-150,000 (U.S.)
Russian Flu	1889-1890	Believed to be H2N2 (avian origin)	1 Million
Spanish Flu	1918-1919	H1N1 virus / Pigs	40-50 Million
Asian Flu	1957- 1958	H2N2 virus	1.1 Million
Hong Kong Flu	1968-1970	H3N2 virus	1 Million
HIV/AIDS	1981-present	Virus / Chimpanzees	25-35 Million
Swine Flu	2009-2010	H1N1 virus / Pigs	2,00,000
SARS	2002-2003	Coronavirus / Bats, Civets	770
Ebola	2014-2016	Ebolavirus / Wild animals	11,000
MERS	2015-Present	Coronavirus / Bats, camels	850
COVID-19	2019-Present	Coronavirus – Unknown (possibly pangolins)	848K (Johns Hopkins University estimate as of 10:28am PT, Aug 31, 2020)

*Source: Visualizing the History of Pandemics – Nicholas Lapan, 2020; Published research papers/media sources

As humans have spread across the world, so have infectious diseases. Even in this modern era, outbreaks are nearly constant, though not every outbreak reaches pandemic level as the Novel Coronavirus (COVID-19) has reached. The history's most deadly pandemics, from Antonine Plague to the current COVID-19 with death toll numbers (with best estimates based on available research) shows that despite persistence of disease and pandemics throughout history, there is, one consistent trend over time – a gradual reduction in the death rate. Healthcare improvements and understanding the factors that incubate pandemics have been powerful tools in mitigating their impact. [Refer Table 7.1.1.]

7.1.2. Epidemic and pandemic history of India

Year	Disease	Pandemic/ Epidemic	Place of origin and Regions effected	Number of deaths/ Impact	Action taken
1817	Cholera	Pandemic	Origin: Jessore District (Current Bangladesh, before partition India)	Mortality data not available; Europeans living in India then and the elite were not seriously affected, the slum dwellers and people in rural poverty were hit the worst	NA
1829	Cholera	Pandemic	Origin: Bengal Other Places: United Provinces (UP); Punjab; Delhi; China	Overall estimation of the mortality is not available; Cholera spread far and wide, all along the trade routes from China affecting several cities and villages alike. In each place, it lasted for a few weeks and killed hundreds of people everyday	NA
1852	Cholera	Pandemic	Places effected: India (Bengal); Persia; Arabia; Russia	Overall estimation of the mortality is not available	NA
1863	Cholera	Pandemic	Origin: Mecca; Other Places: India (Haridwar; Madras)	Overall estimation of the mortality is not available; Madras Presidency in 1877 was the worst hit and the cholera epidemic was responsible for about 10% of the annual mortality then	NA
1881	Cholera	Pandemic	Places effected: India (Calcutta; UP; Punjab); Egypt; Afghanistan; Persia; Russia; Europe	Overall estimation of the mortality is not available	It was during this pandemic (1881-1869) that Robert Koch proved that cholera was transmitted through the fecal-oral route
1896	Bombay Plague	Epidemic	Origin: Bombay	Overall estimation of the mortality is not available; Plague killed thousands and many people were forced out of the city	The anti-plague campaign was started to battle this epidemic and it was based on the belief that the focus of the infections was from the slums
1899	Cholera	Pandemic	Possible Origin: India (Bombay, Calcutta, and Madras); Other Places Effected: Asian subcontinent; USA	Overall estimation of the mortality is not available; The sixth cholera pandemic lasted for about 25 years	NA

Year	Disease	Pandemic/ Epidemic	Place of origin and Regions effected	Number of deaths/ Impact	Action taken
1918-19	Spanish Flu (Influenza)	Pandemic	India considered to be the foci (Bombay; northern India); Sri Lanka next then rest of world	20- 50 million deaths worldwide and is considered most devastating	Social distancing measures were introduced, for example closing schools, theatres, and places of worship, limiting public transportation, and banning mass gatherings; Wearing face masks became common in some places
1970-90	Polio	Epidemic	Uttar Pradesh Most effected (1990s)	Overall estimation of the mortality/ morbidity not known	Introduction of the OPV in EPI with improvement in surveillance and emphasis has been laid on maintaining the guard to prevent resurgence
1974	Small Pox	Epidemic	Places effected: West Bengal, Bihar and Odisha	India contributed to about 85% of this epidemic worldwide; Over 15,000 people died (India)	WHO small pox eradication program, first disease to be combated globally and was declared eradicated by WHO in 1980
1994	Surat Plague	Epidemic	Origin: Surat city (Gujrat)	Fewer than 1,200 people were found positive; High fatality rate	Initially difficult for doctors to diagnose it but when they did, all necessary precautions taken to contain its spread
2002	Plague of Northern India	Epidemic	Origin: Shimla District (Himachal Pradesh)	Overall estimation of the mortality/ morbidity not known	As soon as the plague was detected, immediate measures were taken like fumigation, evacuation, and chemoprophylaxis that lead to further control of the epidemic
2003	Dengue	Epidemic	Outbreak Location: Delhi	Mortality rate was around 3%.	Widespread preventive measures taken to control DF
2003	SARS (severe acute respiratory syndrome)	Epidemic	Origin: Guandong province of China; Other Places: 30 countries across Asia, Americas and Europe	Total of 8,439 cases and 812 deaths, within 7 to 8 months	NA
2005	Meningococcal Meningitis	Epidemic	Places effected: Delhi; Uttar Pradesh; Maharashtra.	430 cases of meningococcal meningitis were reported as of June 2005	Case management and early detection through surveillance was aimed at prevention of spread

Year	Disease	Pandemic/ Epidemic	Place of origin and Regions effected	Number of deaths/ Impact	Action taken
2006	Chikungunya Outbreak	Epidemic	Major Outbreak: Ahmedabad (Gujrat); Other Places: Andhra Pradesh (Telangana not separated); Karnataka; and Tamil Nadu	3.4 million cases of Chikungunya were reported in Ahmedabad 2006 with 2,944 deaths	Major efforts were taken for mosquito control and several awareness campaigns were initiated by the television and print media
2006	Dengue Outbreak	Epidemic	Places effected: Delhi; Rajasthan; Kerala; Gujarat; Chandigarh; and Uttar Pradesh	Overall estimation of the mortality/ morbidity not known	The ministry of health set up a control room to monitor the outbreak and provide technical assistance that led to the efficient management of the disease
2009	Gujarat Jaundice	Epidemic	Origin: Modasa town in Gujarat	Overall estimation of the mortality/ morbidity not known; First Major outbreak of Hepatitis B	It was a long-lasting epidemic and control was achieved by mass public awareness and health actions
2009	H1N1 Flu (swine flu)	Pandemic	Detected first in the United States and spread quickly across the United States and the world	CDC estimated that 151,700-575,400 people worldwide died from (H1N1) pdm09 virus infection during the first year the virus circulated; Globally, 80 percent of (H1N1) pdm09 virus- related deaths were estimated to have occurred in people younger than 65 years of age	A monovalent (H1N1) pdm09 vaccine produced for control
2014	Odisha Jaundice	Epidemic	Origin: Kantalbai, a remote village in Odisha	Overall estimation of the mortality/ morbidity not known	Surveillance for clean water and sanitation was used as the control measure
2015	Indian Swine Flu	Epidemic	Most cases were reported from the States of Rajasthan, Gujarat, Delhi, Jammu and Kashmir, Maharashtra, Madhya Pradesh, Telangana, Karnataka and Tamil Nadu	30,000 laboratory confirmed cases with more than 1700 deaths by March 15, 2015	Strengthening the surveillance; Provision of laboratory support; Dissemination of guidelines for case management of cases and vaccination; Making (medicines) oseltamivir available through the public health system; Educating the public through regular information, education and communication (IEC) activities

Year	Disease	Pandemic/ Epidemic	Place of origin and Regions effected	Number of deaths/ Impact	Action taken
2018	Nipah Outbreak	Epidemic	Origin: Kozhikode District, Kerala	17 deaths	Spread of awareness about this infection, isolation of the infected and post- outbreak surveillance led to the control of this outbreak

Source: Epidemics and Pandemic in India throughout History – Review Article, Swetha G, et.al., IJPHRD, 2019; Other published articles and/ media reports.

Note: NA – Not Available

As far as India is concerned, there have been only two major, significant pandemics throughout history. While cholera had been predominant throughout the 19th century with increasing death tolls every year, the influenza pandemic came later on in the early 20th century [Refer Table 7.1.2]. The influenza pandemic was short but devastating and after a long time, quite recently, came yet another flu pandemic by the H1N1 strain.

7.2. Emerging and Re-emerging Infections in India

7.2.1 Newly Discovered Organisms of Public Health Importance

Year	Microbes	Disease
1975	Parvovirus B-19	Fifth Disease
1976	Cryptosporidium parvum	Cryptosporidiosis
1977	Ebola Virus	Ebola Haemorrhagic Fever
1977	Legionella pneumophila	Legionnaire's disease
1977	Hantaan Virus	Korean Hemorrhagic fever
1977	Campylobacter jejuni	Gastroenteritis (food poisoning)
1980	Human T-Lymphotropic Virus (HLTV-1)	T- cell leukemia / Lymphoma
1981	Toxin-producing-strain of staphylococcus aureus (golden staph)	Various infections
1982	Escherichia Coli O157:H7	Food Poisoning
1982	HLTV _II	Lymphoma
1982	Borrelia burgdorferi	Lyme disease
1983	Human Immunodeficiency Virus	AIDS
1983	Helicobacter pylori	Duodenal and gastric ulcer and stomach cancer
1985	Enterocytozoon bienersi	Microsporidiosis diarrhoea
1986	Cyclospora cayatanensis	Dairrhea
1988	Hepatitis E virus	Hepatitis
1989	Ehrilichia chafeensis	Human monocytic Ehrilichiosis
1989	Hepatitis C virus	Liver cancer (hepatocellular carcinoma)
1991	Guanarito virus	Venezuelan haemorrhagic fever,
1991	Encephalitozoon hellem	
1991	New species of Babesia	Babesiosis haemolytic disease
1992	Vibrio Cholera O139	Cholera
1992	Bartonella henselae	Bacteremia, endocarditis, bacillary angiomatosis & peliosis hepatis
1993	Sin nombre virus	Hanta virus cardiopulmonary syndrome, aka Four corners virus or Navajo flu
1993	Encephalitozoon cuniculi	
1994	Sabia Virus	...
1995	Human Herpes virus (HHV-8)	Kaposi's sarcoma
1999	Nipah virus ^a	...
2002	SARS coronavirus ^a	Severe acute respiratory syndrome
2003	Influenza A (H5N1) ^a	Avian Influenza
2009	Influenza A (H1N1)	Swine Flu
2019	Novel Corona Virus	Severe respiratory infection

Adapted from WHO ^{<?>} a- first identified in Asia

Source: 1. Combating emerging infectious diseases in the South-East Asia Region. New Delhi: World Health Organization, WHO SEARO; 2005. World Health Organization, Regional Office for South East Asia Region. [Google Scholar]

Over 30 new infectious agents have been detected worldwide in the last three decades; 60 per cent of these are of zoonotic origin. In the recent past before COVID-19, India has seen outbreaks of eight organisms of emerging and re-emerging diseases in various parts of the country, six of these are of zoonotic origin. [Refer Table 7.2 1].

7.3. COVID -19 Outbreak and Health System Response

7.3.1. List of Viral Research & Diagnostic Laboratories (VRDLs)

Source: Department of Health Research (DHR)/ Indian Council of Medical Research (ICMR)

Viral Research & Diagnostic Laboratories (VRDLs) : Realizing the high risk faced by the country due to emerging/re-emerging viral infections and limited capacity for timely detection of such viruses, the Department of Health Research (DHR)/ Indian Council of Medical Research (ICMR) took a far-sighted decision of enhancing the country's capacity for early identification and diagnosis of all viral infections of public health importance. This initiative of DHR/ICMR has been rolled out on approval of the VRDL Scheme by the Union Cabinet. Viral Research & Diagnostic Laboratories (VRDLs) play a significant role in surveillance, diagnosis and detection of outbreaks. The Scheme is in the mid phase for setting up of new VRDLs and creating high quality systems for existing network which will effectively identify emerging/re-emerging viral pathogens at an early stage and prevent spreading of epidemics. During the 14th Finance Commission, a network of 106 functional VRDLs has been laid down [Refer Table 7.3.1].

7.3.2 Country-wise Date of onset, Number of Cases and Total Fatalities due to Covid-19 reported till 31st July

S. No	Country	Date of Onset	Total Cases	Total Deaths
1	United States of America	20-01-2020	4388566	150054
2	Brazil	26-02-2020	2552265	90134
3	India	30-01-2020	1638870	35747
4	Russian Federation	31-01-2020	839981	13963
5	South Africa	05-03-2020	482169	7812
6	Mexico	28-02-2020	408449	45361

Total – 214 Countries			1,70,98,427	6,63,606

Source: WHO Website Dashboard (Till 31st July 2020)

Ever since the onset of COVID-19, a total of 214 countries have reported cases of infection and deaths due to it (Table 7.3.2.1). Till 31st July 2020, a total of 1,70,98,427 total cases have been reported, and a total of 6,63,606 deaths have been reported world over. Among the different countries, while India has the 3rd highest number of reported cases (16,38,870), it has the 5th highest number of reported deaths due to COVID-19 (35,747, 2% of total cases).

7.3.3. COVID -19 Response Related Data

Health system preparedness during earlier outbreaks has really helped National and State Governments to respond to the ongoing pandemic and lessons learned during COVID-19 are going to shape up the future combat strategy. The Ministry of Health and Family Welfare is committed to fight the COVID-19 and any future outbreak. The gaps and challenges identified during ongoing response have been translated into the emergency response and preparedness package which is a 100% Centrally-funded plan which will be implemented in three phases during the period of January 2020 to March 2024. The package is to 'support the acceleration and scale up of the GOI response to COVID-19 while serving the purpose of building systems to respond to future disease outbreaks'.

Fig. 7.2 - States with Highest COVID-19 Test Centres

Source: Table 7.3.3.4

Government had rapidly scaled up testing facility with a total of 1,810 testing centres of which 1082 are in Government and 728 are in Private facilities. [Refer Table No 7.3.3.4]. Among the states Uttar Pradesh has the highest number of test centres (192), followed by Tamil Nadu (178) and Maharashtra (169) [Refer Figure. 7.3.3.4]. Tamil Nadu, Karnataka, Kerala and Delhi are the only places among the top states where there are more private test centres in comparison to the government facilities [Refer Figure 7.3.3.4].

ANNEXURE

(A) Brief on Central Bureau of Health Intelligence (CBHI)

Central Bureau of Health Intelligence (CBHI), established in **1961**, is the **Health Intelligence** Wing of the Directorate General of Health Services in the Ministry of Health & FW, GOI with the vision to have **“A strong Health Management Information System in entire country”**. This Bureau is headed by a SAG level medical officer with specialization in public health administration of Central Health Services (CHS), supported by officers from Indian Statistical Services as well as CHS through its field survey and training units.

The **Mission** of CBHI is **“To strengthen Health Information system in each of the district in the country up to facility level for evidence based decision making in the Health Sector”**.

1. The objective of CBHI

- a. To collect, analyse & disseminate Health Sector related data of the country for evidence-based policy decisions, planning and research activities;
- b. To identify & disseminate innovative practices for Health Sector Reforms;
- c. To develop Human resource for scientifically maintaining medical records in both Government & private medical Institutes in India;
- d. To carry out Need Based Operational Research for Efficient implementation of Health Information System & Implementation of Family of International Classifications in India;
- e. To sensitize & create a pool of Master Trainers in Health sector for implementation of Family of International Classification in India;
- f. To collaborate with National & International Institutes for imparting knowledge & skill development and
- g. To function as collaborating centre for WHO FIC in India & SEARO countries.

2. Organization

- a. The CBHI under the aegis of DGHS, Government of India and headed by a DDG & Director, has three Divisions viz. (i) Policy, Training & Coordination, (ii) Information & Evaluation, and (iii) Administration.
- b. It has six Health Information Field Survey Units (FSUs) under the supervision of respective Regional Office of Health & Family Welfare (ROHFW), GOI located at Bengaluru, Bhopal, Bhubaneswar, Jaipur, Lucknow and Patna; each headed by a Deputy Director of Indian Statistical Service (ISS) with technical & support staff from Subordinate Statistical Service (SSS) and allied services.
- c. It conducts various in-service training courses through its six FSUs and four training centres viz. (i) Regional Health Statistics Training Centre (RHSTC), Mohali, Punjab, (ii) Medical Record Department & Training Centre (MRDTC) of Safdarjung Hospital, New Delhi, (iii) JIPMER, Puducherry, and (iv) Medical Record Department & Training Centre (MRDTC), Dr. RML Hospital, New Delhi.

3. Major Activities of CBHI

- 3.1** CBHI collects primary as well as secondary data on various communicable and non-communicable diseases, human resource in health sector and health infrastructure from various Government Organizations/ Departments to maintain and disseminate Health Statistics through its annual publication “National Health Profile” which highlights most of the relevant health information under 6 major indicators viz. *Demographic, Socio-economic, Health Status, Health Finance, Health Infrastructure and Human Resources*.
- 3.2** CBHI collects the information on reform initiatives for Health Sector Policy Reform Option Database (HS-PROD). [www.hsprodindia.nic.in] though States/UTs of India have been making sincere efforts and reforms in the health care delivery system, a lot of this goes unnoticed and is thus not documented. For this purpose, the European Commission supported Sector Investment Programme (SIP) of MOHFW, GOI initiated steps forward. In this endeavour, MOHFW identified CBHI for creating Health Sector-Policy Reform Options Database (HS-PROD) of India. **Initiatives under 16 key management areas** have been taken from a varied range of stakeholders like State/ UT governments, development partners, non-government organizations etc. In this issue a Chapter on History of Pandemics with special focus on incidence and impact of COVID-19 has been included.

Kindly visit this website for appropriate use & replication of reforms. CBHI solicits information on such reforms from State/UT governments, health program managers, researchers, teachers and institutions in order to regularly update this national database. Sense of ownership and pride is to be taken in an effort like HS-PROD by all public health professionals.

3.3 National Level Man-Power Development Training Programs:

For capacity building and human resources development in health sector, CBHI conducts in-service training program for the officers and the staff working in various Medical Record Department & health institutions of the

Central/State governments, ESI, Defence and Railways as well as private health institutions through its various training centres. Following are the long-term in-service training programs for maintenance of Medical Records in Medical Institutions, conducted by the CBHI with the view to strengthen and develop human resources & health information system of the country.

S No.	Name of the training	Batch	Duration	Training Centre (TC)
1.	Medical Record Officer	2 batches (1 batch at each training centre)	1 Year	1. Medical Record Department & T.C. at Safdarjung Hospital in New Delhi 2. JIPMER, Puducherry
2.	Medical Record Technician	6 batches (2 batches at each training centre)	6 Months	1. Medical Record Department & T.C. at Safdarjung Hospital in New Delhi 2. JIPMER, Puducherry 3. Dr. R M L Hospital, New Delhi

Training Calendar, Eligibility, Guidelines and Application Forms for all the above courses can be downloaded from the CBHI official website www.cbhidghs.nic.in

3.4 Capacity Building & Operation Research for Efficient health information system (HIS) including Family of International Classification (ICD-10 & ICF) use in India and South East Asia Region. CBHI is conducting National Level training course on Master trainers on ICD-10 & ICF at RHSTC at Mohali Punjab. It is also organizing sensitization workshops on ICD-10 & ICF in big Govt. /Pvt. Hospitals and through its FSUs.

S No.	Name of training	Batch/ year	Training Duration	Training Centre
1.	Training Course on Master Trainers On ICD-10	2	5 days	RHSTC Mohali
2	Training Course on Master Trainers On ICF	2	3 days	RHSTC Mohali
3	Orientation training course on Health Information Management (For Officers)	8	5 days	RHSTC Mohali & 6 FSUs
4.	Orientation training course on Health Information Management (For non-medical personnel)	14	5 days	RHSTC Mohali & 6 FSUs
5	Orientation training course on Family of International classification (ICD-10 & ICF) (For Non-Medical Personnel)	20	5 days	RHSTC Mohali & 6 FSUs
6	Orientation training course on Medical Record & Information Management for Non-Medical Personnel	8	5 days	RHSTC Mohali & 6 FSUs

On regular basis, CBHI conducts 54 batches of Training Courses every year. Special batches of National/International Training Courses are conducted on request of States/UTs & various organizations like IRDA, WHO, Ministry of Defence etc.

3.5 CBHI Provides Internship and Health Management Programs for the students of National Universities and Institutes.

3.6 Function as WHO Collaborating Centre on Family of International Classifications (ICD – 10 & ICF) in India with the following major objectives: -

- I. To promote the development & use of the WHO Family of International Classifications (WHO-FIC) including the International Statistical Classification of Diseases and Related Health Problems (ICD), the International Classification of Functioning, Disability and Health (ICF), and other derived and related classifications and to contribute to their implementation and improvement in the light of the empirical experience by multiple parties as a common language.
- II. Contribute to the development of methodologies for the use of the WHO-FIC to facilitate the measurement of health status, interventions and outcomes on a consistent and reliable basis to permit comparisons within and between countries at a same point in time by:
 - (a) Supporting the work of the various committees and work groups established to assist WHO in the

development, testing, implementation, use, improvement, updating and revision of the member components of the WHO-FIC.

- (b) Studying aspects related to the structure, interpretation and application of contents concerning taxonomy, linguistics, terminologies and nomenclatures.
- (c) Participating in the quality assurance procedures of the WHO-FIC classifications regarding norms of use, training and data collection and application rules.

III. Networking with current and potential users of the WHO-FIC and act as reference centre by:

- a) Assisting WHO Headquarters and the Regional Offices in the preparation of member components of the WHO-FIC and other relevant materials.
- b) Participating actively in updating and revising the member components of the WHO-FIC.
- c) Providing support to existing and potential users of the WHO-FIC and of the data derived in India and SEARO Region. Linkage will also be made with other countries of Asian Pacific Region for seeking status on FIC implementation.

IV. Work in at least one related and/or derived area of the WHO-FIC: Specialty- based adaptations primary care adaptations, interventions/procedures, injury classification (ICECI).

- 3.7** Maintaining three websites: www.cbhidghs.nic.in (Main Website), www.cbhi.nic.in (Data entry portal for on-line data transmission by the States/UTs to CBHI) and www.hsprodindia.nic.in.

4. CBHI Linkages and Coordination

- a. All States/UTs of India
- b. All 20 Regional Offices of Health & FW of GOI
- c. National Rural Health Mission (NRHM) and National Health Programmes in India
- d. Medical, Nursing & Paramedical Councils & Educational Institutions
- e. Public Health/Medical Care Organizations and Research Institutions under Department of Health Research including ICMR and Various other Ministries
- f. Census Commissioner & Registrar General of India
- g. NITI Ayog, Government of India
- h. Ministry of Statistics & Programme Implementation
- i. Ministry of Defence, Railways, Labour, HRD, Rural Development, Communication & Information Technology, Shipping Road Transport & Highways, Home Affairs, Social Justice & Empowerment, etc.
- j. WHO and other UN Agencies Concerned with Health and Socio-Economic Development
- k. All the WHO – Collaborating Centres on Family of International Classification (FIC) in the world Asia Pacific Network on FIC and countries of South East Asia Region
- l. European Commission
- m. IRDA, Hyderabad
- n. Institute of Economic Growth (IEG).
- o. Non-Government Organizations in Health & related sectors in India

D. Regional Evaluation Team (RET)

The system of sample check of Family Planning acceptors was introduced in the year, 1972 by the State Demographic and Evaluation Cell followed by the Regional Health Offices in 1974-75. The two agencies were assigned multifarious duties and thus could carry out the evaluation in limited manner. In the year 1976, four field evaluation teams, each consisting of one Evaluation Officer & four Evaluation Assistants and further 4 more evaluation teams in the year 1982, were also created to conduct an independent, both qualitative and quantitative evaluation under the control of E & I Division (renamed as Statistics Division) under the Ministry of Health & Family Welfare placed at New Delhi (Headquarters), Bhopal, Bengaluru, Chennai, Kolkata, Lucknow, Pune and Patna. Reports of RETs are shared with respective State Governments and Programme Divisions for taking up corrective action. RETs unit is only single hand nodal agency of MoHFW, Government of India for evaluating all health-related programmes at grass root level.

E. National Health Resource Repository

With comprehensive information on both public and private health sector is prerequisite for planning resource allocation and to reduce the disparities and inequities to achieve the Universal Health Coverage. Recognizing the role of private health sector in Indian settings and its potential to supplement government initiatives and planning for public health resources, it has been felt to obtain reliable information on private sector healthcare resource deployment. This will underpin government strategies to hitherto unreached segments of the population, where public health resources are constrained, potential to tie up with private sector can be explored for better service delivery. Hence, realizing its importance CBHI embarked on an ambitious project to exhaustively map the healthcare establishments from both public and private sector all across the country, as one of its key initiatives.

Vision: Creating a robust, standardized and secured information technology enabled repository of country's healthcare resources befitting as a building block into country's long term strategy of digitalizing healthcare to strengthen evidence based decision making

Aim: Single platform for comprehensive information of public and private health resources including hospitals, doctors, chemists, diagnostic labs etc. capturing over 1400 data variables

Objectives:

It has been mandated to achieve the following objectives

- Promote evidence based planning and decision making in healthcare sector through provision of comprehensive data on healthcare resources (both public and private sector) in the country.
- Provide visibility of private sector healthcare resources to facilitate public private partnership initiatives for improve access and availability of health services
- Provide technology based solutions to improve efficiency of health systems by improving planning, provisioning of healthcare resources
- Improve informed decision making and community awareness by allowing access to holistic information on healthcare resources.
- Promote meaningful use of data collection and exchange services for better healthcare management by providing a common platform for sharing information.
- Promote convergence between similar programmes by providing interoperability
- Enhance effectiveness of programme planning and implementation at centre, state and district level by providing updated healthcare resource status.
- Provide a platform for managing emergencies effectively by providing information on all the healthcare resources (public & private) in the designated geography.
- Furnish standardized data, distribution of resources and trends on the global platform, using regularly updated health status indicators.

Rationale from NHRR Stakeholders and users perspectives

Decision making in the healthcare sector is highly complex and have different levels ranges from single patient to country's policy makers at large. Stakeholders in health system range from single patient, community, providers, professional bodies, health Councils, various professional bodies, State, Central government and various development agencies etc.

It was comprehended that NHRR should able to cater the requirements of all stakeholders. Considering relevance and

classification of data to be captured under NHRR, all stakeholders can be divided into four categories- Policy Makers, National & State Programme Managers, community and Private Providers.

NHRR aims to support decision making of all these stakeholders by providing reliable information, thereby, catering to the unmet needs of these stakeholders

Needs of Policy Makers:

It is important that larger policy decisions are taken based on latest and reliable information on the available healthcare resources, their deployment and trends that can address entrenched problem of health system with real time solutions. To aid this, health policy and system planning must be demand-driven, and satisfy the needs of modern healthcare systems utilizing up-to-date information on country's healthcare resources.

Needs of National and State Programme Managers

Program planning involves identifying and projecting most critical needs of the different programme and community and by analyzing their existing ability to address those requirements. National and State Programme Managers draw their implementation plan keeping in consideration the gap analysis and priorities, presenting the case to higher-ups, executing the plan and evaluating the outcome of the efforts, and reporting that outcome back to partners, stakeholders, and to policy makers.

Needs of Private Providers:

Private providers constitute a significant part of the health system in India which ranges from single providers to corporate hospitals. Private provider behaviour is influenced by the interplay of policy-makers who set policy, enact legislation and enforce regulations. Similarly, it is also affected by purchasing power of populations and providers' experience, skills and motivations to deal with patient, government and their competitor. However, focusing on coverage, quality, cost, along with policy-makers, providers and people, serves as a helpful aide-memoire for private providers to organize their service better and eventually leading to service improvement.

Needs of Community:

Community is a major stakeholder in the healthcare system where all the planning, decisions, services and provisions get concentrated, and eventually are the beneficiary of healthcare services and related interventions. In the current scenario, it is widely advocated that role of the community should not only be limited to recipient of services but it should also have community participation in decision making. Community decision making primarily involves decision making at two level; individual level and community at large. Information on availability and affordability of health services influence access to health services.

Unique Features of NHRR:

1. First Census in Healthcare of Public & Private Establishments
2. Paperless Census using Tablets & Mobile App
3. Simultaneous pan-India roll-out for resource mapping
4. Unique QR Code assigned to each Healthcare Establishment
5. Putting into practice the "Collection of Statistics Act, 2008"
6. Visualization & Analytics on ISRO's Bhuvan Platform
7. Use of Population Census EB Maps 2011
8. Mechanism for Data Updation

CBHI accordingly launched Nationwide Census of healthcare establishments across the country through National Health Resource Repository (NHRR) project announced by Hon'ble HFM on 9th June 2018. The Data collection and compilation under the project has been completed and data collected is currently under the validation phase. The key outcomes of the project include inter-alia access to comprehensive and standardized information of both private and public health resources at a single platform on digitized maps.

2019 Health SDG Profile: India

Population (000s) ¹ 1 366 418	Urban population ² 34%	Poverty ³ (ppp < \$1.90 a day) 21.2%	GDP per capita ³ (Current US\$) 2015.6	Current health expenditure as share of GDP ⁴ 3.6%

Monitoring the health SDG goal: Indicators of overall progress

Life expectancy at birth

Life expectancy⁵ measures how long people will live and is an indication of overall mortality of a country's population. Lost healthy life expectancy (HALE) represents equivalent year(s) of full health lost through years lived with morbidity and disability. Although females live longer, lost HALE is longer as well, on average 1.7 years or 19.5% more than males.

Universal health coverage: At the centre of the health goal

The goal of universal health coverage (UHC) is that all people and communities receive the health care they need, without suffering financial hardship. Monitoring UHC requires measuring **health service coverage** and **financial protection** (SDG target 3.8).

HEALTH SERVICES COVERAGE

The summary measure of essential health services coverage, *service coverage index* of 16 indicators in four main areas: (1) reproductive, maternal, newborn and child health; (2) infectious diseases; (3) noncommunicable diseases; (4) service capacity, access and health security.

Reproductive, maternal, newborn and child health

Infectious diseases

Noncommunicable diseases

Service capacity, access and health security

UHC services coverage index of essential health services

To provide a summary measure of coverage, an index of national service coverage is computed by averaging service coverage values across the 16 tracer indicators. The UHC coverage index ranges from 0% to 100%, with 100% implying full coverage across a range of services.

UHC services coverage index

FINANCIAL PROTECTION

Financial protection is measured through two indicators: (1) impoverishment, and (2) catastrophic health expenditure.

Impoverishment: Insufficient data

Catastrophic expenditure on health: Insufficient data

Out-of-pocket expenditure⁴

In most cases, high percentage of out-of-pocket expenditure out of the total health expenditure is associated with low financial protection.

Out-of-pocket expenditure, as % of the health expenditure (2016)

Public spending on health⁴ is determined by the capacity of the government to raise revenues and the level of priority it attaches to the health sector.

This profile provides an overview of the current status of progress towards the 13 targets under the Sustainable Development Goal #3 (SDG3): Ensure healthy lives and promote well-being for all at all ages. All SDG3 indicators plus other selected health-related indicators are presented using global health estimates or country comparable reported values if available. When nationally reported indicators from other sources are available, these are included in the references.

Equity status and trends: Variation by income, geographical location and education*

Variation by income

Variation by geographical location

Variation by education

*There are many dimensions of equity, including but not limited to examples based on income, geographical location, and education presented here but also age, sex, race, and others. SDG 17.18 emphasizes the need for disaggregated data to facilitate better measurement of inequalities.

Health service delivery

NCD risk factors

SDG 3: Health targets

Maternal and child mortality (SDG target 3.1, 3.2)

Communicable diseases (SDG target 3.3)

Noncommunicable diseases and injuries

Indicators	SDG target	Year	India	Regional estimate
Probability of dying from any of CVD, cancer, diabetes, CRD between age 30 and age 70 ²³ (%)	3.4.1	2016	23.3	23.1
Suicide mortality rate ^{23, 24} (per 100 000 population)	3.4.2	2016	16.3	13.2
Total alcohol per capita (age 15+ years) consumption ²³	3.5.2	2016	5.7	4.5
Road traffic mortality rate ^{23, 25} (per 100 000 population)	3.6.1	2016	22.6	20.7

Sexual and reproductive health

Proportion of married or in-union women of reproductive age who have their need for family planning satisfied with modern methods ⁶ (%)	3.7.1	2015	71.9	71.4
Adolescent birth rate ⁶ (per 1000 women aged 15 to 19 years)	3.7.2	2015	51	33.0

Mortality due to environmental pollution

Age-standardized mortality rate attributed to household and ambient air pollution ²³ (per 100 000 population)	3.9.1	2016	184.3	165.8
Mortality rate attributed to exposure to unsafe WASH services ²³ (per 100 000 population)	3.9.2	2016	18.6	15.4
Mortality rate from unintentional poisoning ²³ (per 100 000 population)	3.9.3	2016	2.4	1.8

Tobacco use

Prevalence of tobacco use among persons aged 15 years and older ¹³ (%) - Female	3.a.1	2016	14.2	-
Prevalence of tobacco use among persons aged 15 years and older ¹³ (%) - Male	3.a.1	2016	42.4	-

Essential medicines and vaccines

DTP3 immunization coverage among 1-year-olds ⁷	3.b.1	2017	88	88
MCV2 immunization coverage by the nationally recommended age ²³	3.b.1	2017	77	77
PCV3 immunization coverage among 1-year-olds ²³	3.b.1	2017	-	12
Total net official development assistance to medical research and basic health per capita ²³ (US \$)	3.b.2	2017	0.21	0.6
Proportion of the population with access to affordable medicines and vaccines on a sustainable basis ²³	3.b.3	-	-	-

Health workforce

Health worker density ¹⁴ (per 10 000 population)	3.c.1	2016	27.5	-

National and global health risks

International Health Regulations Core Capacity Index ¹⁵	3.d.1	2018	75	56

G. National Health Policy

The primary aim of the National Health Policy, 2017, is to inform, clarify, strengthen and prioritize the role of the Government in shaping health systems in all its dimensions- investments in health, organization of healthcare services, prevention of diseases and promotion of good health through cross sectoral actions, access to technologies, developing human resources, encouraging medical pluralism, building knowledge base, developing better financial protection strategies, strengthening regulation and health assurance.

Goal

The policy envisages as its goal the attainment of the highest possible level of health and wellbeing for all at all ages, through a preventive and promotive health care orientation in all developmental policies, and universal access to good quality health care services without anyone having to face financial hardship as a consequence. This would be achieved through increasing access, improving quality and lowering the cost of healthcare delivery.

Specific Quantitative Goals and Objectives:

The indicative, quantitative goals and objectives are outlined under three broad components viz. (a) health status and programme impact, (b) health systems performance and (c) health system strengthening. These goals and objectives are aligned to achieve sustainable development in health sector in keeping with the policy thrust.

1. Health Status and Programme Impact

1.1 Life Expectancy and healthy life

- a) Increase Life Expectancy at birth from 67.5 to 70 by 2025.
- b) Establish regular tracking of Disability Adjusted Life Years (DALY) Index as a measure of burden of disease and its trends by major categories by 2022.
- c) Reduction of TFR to 2.1 at national and sub-national level by 2025.

1.2 Mortality by Age and/ or cause

- a) Reduce Under Five Mortality to 23 by 2025 and MMR from current levels to 100 by 2020.
- b) Reduce infant mortality rate to 28 by 2019.
- c) Reduce neo-natal mortality to 16 and still birth rate to “single digit” by 2025.

1.3 Reduction of disease prevalence/ incidence

- a) Achieve global target of 2020 which is also termed as target of 90:90:90, for HIV/AIDS i. e, - 90% of all people living with HIV know their HIV status, - 90% of all people diagnosed with HIV infection receive sustained antiretroviral therapy and 90% of all people receiving antiretroviral therapy will have viral suppression.
- b) Achieve and maintain elimination status of Leprosy by 2018, Kala-Azar by 2017 and Lymphatic Filariasis in endemic pockets by 2017.
- c) To achieve and maintain a cure rate of >85% in new sputum positive patients for TB and reduce incidence of new cases, to reach elimination status by 2025.
- d) To reduce the prevalence of blindness to 0.25/ 1000 by 2025 and disease burden by one third from current levels.
- e) To reduce premature mortality from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases by 25% by 2025.

2 Health Systems Performance

2.1 Coverage of Health Services

- a) Increase utilization of public health facilities by 50% from current levels by 2025.

- b) Antenatal care coverage to be sustained above 90% and skilled attendance at birth above 90% by 2025.
- c) More than 90% of the newborn are fully immunized by one year of age by 2025.
- d) Meet need of family planning above 90% at national and sub national level by 2025.
- e) 80% of known hypertensive and diabetic individuals at household level maintain “controlled disease status” by 2025.

2.2 Cross Sectoral goals related to health

- a) Relative reduction in prevalence of current tobacco use by 15% by 2020 and 30% by 2025.
- b) Reduction of 40% in prevalence of stunting of under-five children by 2025.
- c) Access to safe water and sanitation to all by 2020 (Swachh Bharat Mission).
- d) Reduction of occupational injury by half from current levels of 334 per lakh agricultural workers by 2020.
- e) National/ State level tracking of selected health behaviour.

3 Health Systems strengthening

3.1 Health finance

- a) Increase health expenditure by Government as a percentage of GDP from the existing 1.15% to 2.5 % by 2025.
- b) Increase State sector health spending to > 8% of their budget by 2020.
- c) Decrease in proportion of households facing catastrophic health expenditure from the current levels by 25%, by 2025.

3.2 Health Infrastructure and Human Resource

- a) Ensure availability of paramedics and doctors as per Indian Public Health Standard (IPHS) norm in high priority districts by 2020.
- b) Increase community health volunteers to population ratio as per IPHS norm, in high priority districts by 2025.
- c) Establish primary and secondary care facility as per norms in high priority districts (population as well as time to reach norms) by 2025.

3.3 Health Management Information

- a) Ensure district-level electronic database of information on health system components by 2020.
- b) Strengthen the health surveillance system and establish registries for diseases of public health importance by 2020.
- c) Establish federated integrated health information architecture, Health Information Exchanges and National Health Information Network by 2025.

(H) Various National Programmes/Schemes/Policies in Health Sector in India

1. Ayushman Bharat -National Health Protection Mission (AB-NHPM) (2018)

Ayushman Bharat is National Health Protection Scheme, which will cover over 10 crore poor and vulnerable families (approximately 50 crore beneficiaries) providing coverage up-to 5 lakh rupees per family per year for secondary and tertiary care hospitalization. The Union Minister for Finance and Corporate Affairs, Shri Arun Jaitley while presenting the General Budget 2018-19 in Parliament announced this programme. Ayushman Bharat - National Health Protection Mission will subsume the on-going centrally sponsored schemes - Rashtriya Swasthya Bima Yojana (RSBY) and the Senior Citizen Health Insurance Scheme (SCHIS). This will be the world’s largest government funded health care programme. Benefits of the scheme are portable across the country and a beneficiary covered under the scheme will be allowed to take cashless benefits from any public/private empanelled hospitals across the country. The beneficiaries can avail benefits in both public and empanelled private facilities. To control costs, the payments for treatment will be done on package rate (to be defined by the Government in advance) basis. States would need to have State Health Agency (SHA) to implement the scheme.

2. Pradhan Mantri Surakshit Matritva Abhiyan (PMSMA) (2016)

Pradhan Mantri Surakshit Matritva Abhiyan envisages to improve the quality and coverage of Antenatal Care (ANC) including diagnostics and counselling services as part of the Reproductive Maternal Neonatal Child and Adolescent Health (RMNCH+A) Strategy. Shri J P Nadda, Union Minister of Health and Family Welfare, launched PMSMA on 04-November-2016. PMSMA guarantees a minimum package of antenatal care services to women in their 2nd / 3rd trimesters of pregnancy at designated government health facilities. PMSMA is based on the promise — that if every pregnant woman in India is examined by a physician and appropriately investigated at least once during the PMSMA and then appropriately followed up — the process can result in reduction in the number of maternal and neonatal deaths in our country.

3. National Health Mission

The National Health Mission (NHM) encompasses its two Sub-Missions, the National Rural Health Mission (NRHM) and the newly launched National Urban Health Mission (NUHM) (NUHM was initiated in the year 2013). The main programmatic components include Health System Strengthening in rural and urban areas- Reproductive-Maternal-Neonatal-Child and Adolescent Health (RMNCH+A), and Communicable and Non-Communicable Diseases. The NHM envisages achievement of universal access to equitable, affordable & quality health care services that are accountable and responsive to people's needs.

4. National Programme for Prevention & Management of Burn Injuries (NPPMBI) (2014)

NPPMBI as full-fledged programme was approved by Cabinet Committee for Economic Affairs (CCEA) on 6th February, 2014, for covering 67 State Government Medical Colleges and 19 District Hospitals during the 12th Five Year-Plan. The Goal of NPPMBI is to ensure prevention of Burn Injuries, provide timely and adequate treatment in case burn injuries do occur, so as to reduce mortality, complications and ensuing disabilities and to provide effective rehabilitative interventions if disability has set in. The

objective of NPPMBI is to reduce incidence, mortality, morbidity and disability due to Burn Injuries and improve awareness among the general masses and vulnerable groups especially the women, children, industrial and hazardous occupational workers.

5. The National Mental Health Policy (2014)

The National Mental Health Policy, announced in October, 2014, is based, inter-alia, on the values and principles of equity, justice, integrated and evidence-based care, quality, participatory and holistic approach to mental health. The vision of the National Health Policy is to promote mental health, prevent mental illness, enable recovery from mental illness, promote de-stigmatization and desegregation, and ensure socio-economic inclusion of persons affected by mental illness by providing accessible, affordable and quality health and social care to all persons through their life-span, within a rights-based framework.

6. Rashtriya Kishor Swasthya Karyakram (RKSK) (2014)

The Ministry of Health & Family Welfare launched on 7th January, 2014 a health programme, named Rashtriya Kishor Swasthya Karyakram, for adolescents, in the age group of 10-19 years, which would target their nutrition, reproductive health and substance abuse, among other issues. The key principle of this programme is adolescent participation and leadership, Equity and inclusion, Gender Equity and strategic partnerships with other sectors and stakeholders. The programme envisions enabling all adolescents in India to realize their full potential by making informed and responsible decisions related to their health and well-being and by accessing the services and support they need to do so. The objectives of this programme are to Improve Nutrition, Improve Sexual and Reproductive Health, Enhance Mental Health, Prevent Injuries & violence and Prevent substance misuse.

7. Janani Shishu Suraksha Karyakaram (JSSK) (2011)

Government of India has launched Janani Shishu Suraksha Karyakaram (JSSK) on 1st June, 2011. The scheme is estimated to benefit more than 12 million pregnant women who access Government health facilities for their delivery. It is an initiative with a hope that states would come forward and ensure that benefits under JSSK would reach every needy pregnant woman coming to government institutional facility. The launch of Janani Shishu Suraksha Karyakram signals to huge leap forward in the quest to make “Health for All” a reality. It invokes a new approach to healthcare, placing for the first time, utmost emphasis on entitlements and elimination of out of pocket expenses for both pregnant women and neonates. The initiative entitles all pregnant women delivering in public health institutions to absolutely free and no-expense delivery. All expenses relating to delivery in a public institution are borne by the government. Under this initiative, a pregnant woman is entitled to free transport from home to the government health facility. Entitlement includes free drugs and consumables, free diagnostic, free blood, free diet for the duration of a woman’s stay in the facility. Similar entitlements have been put in place for all sick newborns accessing public health institutions for healthcare till 30 days after birth. They are entitled to free treatment besides free transport, both ways and between facilities in case of a referral. JSSK is estimated to benefit more than one crore pregnant women and newborns every year both in urban and rural areas. It supplements the cash assistance given to a pregnant woman under Janani Suraksha Yojana (JSY).

8. National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS) (2010)

National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS) was launched in 2010 in 100 districts across 21 States with the aim to prevent and control these diseases thorough awareness generation, behaviour and life-style changes, early diagnosis of persons with high levels of risk factors. The programme manages chronic Non-Communicable diseases especially Cancer, Diabetes, CVDs and Stroke through early diagnosis, treatment and follows up through setting up of NCD clinics. It aims to promote health through behaviour change with involvement of community, civil society, community-based organizations, media etc. Provision has been made under the programme to provide free diagnostic facilities and free drugs for NCD patients attending the NCD clinics at the District and CHC levels.

9. National Programme for the Health Care of Elderly” (NPHCE) (2010)

Keeping in view the recommendations made in the “National Policy on Older Persons” as well as the State’s obligation under the “Maintenance & Welfare of Parents & Senior Citizens Act 2007”, the Ministry of Health & Family Welfare launched the “National Programme for the Health Care of Elderly” (NPHCE) during the year 2010, in the 11th Plan period, to address various health related problems of elderly people.

10. The National Programme for Prevention and Control of Fluorosis (NPPCF) (2008)

To address the problem of fluorosis, mainly due to intake of high fluoride through drinking water, the National Programme for Prevention and Control of Fluorosis (NPPCF) was initiated in 2008-09 during 11th Five Year Plan.

Objectives of NPPCF:

- To collect, assess and use the baseline survey data of fluorosis of Ministry of Drinking Water and Sanitation for starting the project;
- Comprehensive management of fluorosis in the selected areas;
- Capacity building for prevention, diagnosis and management of fluorosis cases.

The strategy followed under the programme is surveillance of fluorosis in the community; capacity building (Human Resource) in the form of training and manpower support; establishment of diagnostic facilities in the district; health education for prevention and control of fluorosis cases; management of fluorosis cases including supplementation and surgery.

11. Rashtriya Swasthya Bima Yojana (RSBY) (2008)

Government of India decided to introduce Rashtriya Swasthya Bima Yojana (RSBY) a Health Insurance Scheme for the Below Poverty Line families with the objectives to reduce OOP expenditure on health and increase access to health care. RSBY was launched in early 2008 and was initially designed to target only the Below Poverty Line (BPL) households, but has been expanded to cover other defined categories of unorganised workers. This health insurance scheme for BPL (below poverty line) families was launched for the workers in the unorganized sector in the FY 2007-08 and it became fully operational from 1st April 2008. It provides for IT-enabled and smart-card-based cashless health insurance, including maternity benefit cover up to Rs. 30,000/- per annum on a family floater basis to BPL families (a unit of five) and 11 other defined categories namely Building & Other Construction Workers, licensed Railway porters, Street Vendors, MGNREGA workers (who have worked for more than fifteen days during preceding financial year), Beedi workers, Domestic workers, Sanitation Workers, Mine Workers, Rickshaw pullers, Rag pickers and Auto/Taxi drivers in the unorganized sector who are enrolled under RSBY. Since 1st April, 2015, the Scheme Rashtriya Swasthya Bima Yojana (RSBY) has been transferred from Labour and Employment Ministry to Ministry of Health & Family Welfare on “as is where is” basis.

12. National Programme for Prevention and Control of Deafness (NPPCD) (2007)

Ministry of Health & Family Welfare had launched this programme on the pilot phase basis in the year 2006-07 (January 2007) in an effort to tackle the high incidence of deafness in the country, in view of the preventable nature of this disability. Under this programme, hearing-aid are provided as per synergy between Assistance to Disabled Persons (ADIP) Scheme of Ministry of Social Justice & Empowerment (MSJE) and National Programme for Prevention and Control of Deafness (NPPCD) of Ministry of Health & Family Welfare.

13. The National Tobacco Control Programme (NTCP) (2007)

In order to protect the youth and masses from the adverse effects of tobacco usage, second hand smoke (SHS) and to discourage the consumption of tobacco, the Govt. Of India enacted a comprehensive tobacco control law namely “Cigarettes and other Tobacco Products (Prohibition of Advertisement and Regulation of Trade and Commerce, Production, Supply and Distribution) Act, 2003. In order to facilitate the effective implementation of the Tobacco Control Law, to bring about greater awareness about the harmful effects of tobacco as well as to fulfil the obligations under the WHO-FCTC, the Ministry of Health and Family Welfare, Government of India launched the National Tobacco Control Programme (NTCP) in 2007- 08 in 42 districts of 21 States/Union Territories of the country with objective to bring about greater awareness about the harmful effects of tobacco use and Tobacco Control Laws and to facilitate effective implementation of the Tobacco Control Laws. Further, the objective of this programme is to control tobacco consumption and minimize the deaths caused by it.

14. The Pradhan Mantri Swasthya Suraksha Yojana (PMSSY) (2003)

PMSSY was announced in 2003 with objectives of correcting regional imbalances in the availability of affordable/reliable tertiary healthcare services and also to augment facilities for quality medical education in the country.

PMSSY has two components:

- (i) Setting up of AIIMS like Institutions.
- (ii) Upgradation of Government Medical College Institutions.

Apart from declaration of six AIIMS in 2003, the PMSSY scheme has been enlarged to encompass setting up of many other AIIMS at different states and also upgradation of existing Government Medical Colleges/Institutions (GMCIs) in different states.

15. Janani Suraksha Yojana (JSY) was launched in April 2005 by modifying the National Maternity Benefit Scheme (NMBS).

The Janani Suraksha Yojana (JSY) is a centrally sponsored Scheme which is being implemented with the objective of reducing maternal and infant mortality by promoting institutional delivery among pregnant women. Under the JSY, eligible pregnant women are entitled for cash assistance irrespective of the age of mother and number of children for giving birth in a government or accredited private health facility. The scheme focuses on poor pregnant woman with a special dispensation for states that have low institutional delivery rates. Janani Suraksha Yojana was launched in April 2005 by modifying the National Maternity Benefit Scheme (NMBS). The NMBS came into effect in August 1995 as one of the components of the National Social Assistance Programme (NSAP). The scheme was transferred from the Ministry of Rural Development to the Department of Health & Family Welfare during the year 2001-02. The NMBS provides for financial assistance of Rs. 500/- per birth up to two live births to the pregnant women who have attained 19 years of age and belong to the below poverty line (BPL) households. States were classified into Low Performing States and High Performing States on the basis of institutional delivery rate i.e. states having institutional delivery 25% or less were termed as Low Performing States (LPS) and those which have institutional delivery rate more than 25% were classified as High Performing States (HPS). The scheme also provides performance-based incentives to women health volunteers known as ASHA (Accredited Social Health Activist) for promoting institutional delivery among pregnant women.

16. Integrated Disease Surveillance Project (IDSP) (2004)

Government of India initiated Integrated Disease Surveillance Project (IDSP) in 2004 with the aim to detect and respond to outbreaks of epidemic prone diseases. A Central Surveillance Unit (CSU) at Delhi, State Surveillance Units (SSU) at all State/UT headquarters and District Surveillance Units (DSU) at all Districts in the country have been established. Mission of IDSP is to strengthen the disease surveillance in the country by establishing a decentralized State based surveillance system for epidemic prone diseases to detect the early warning signals, so that timely and effective public health actions can be initiated in response to health challenges in the country at the Districts, State and National level. Objective of IDSP is to strengthen/maintain decentralized laboratory-based IT enabled disease surveillance system for epidemic prone diseases to monitor disease trends and to detect and respond to outbreaks in early rising phase through trained Rapid Response Team (RRTs).

17. National Vector Borne Disease Control Programme (NVBDCP) (2003)

The National Vector Borne Disease Control Programme (NVBDCP) is an umbrella programme for prevention and control of Vector borne diseases. Earlier the Vector Borne Diseases were managed under separate National Health Programmes, but now NVBDCP covers all 6 Vector borne diseases namely: 1. Malaria 2. Dengue 3. Chikungunya 4. Japanese Encephalitis 5. Kala-Azar 6. Filaria (Lymphatic Filariasis). The National Vector Borne Disease Control Programme (NVBDCP) is the programme for prevention & control of these vector borne diseases as an integral part of the National Health Mission (NHM) of India. The NVBDCP envisages a self-sustained and well informed, healthy India free from vector borne diseases with equitable access to quality health care services nearest to their residences. The Programme activities are directed in a way to meet with the Millennium Development Goal of halting and reversing the incidence of malaria and other vector borne diseases by the year 2015.

18. National AIDS Control Programme (NACO) (1992)

National AIDS Control Organization is a division of the Ministry of Health and Family Welfare that provides leadership to HIV/AIDS control programme in India through 35 HIV/AIDS Prevention and Control Societies. In 1992 India's first National AIDS Control Programme (1992-1999) was launched, and National AIDS Control Organization (NACO) was constituted to implement the programme. Over time, the focus has shifted from raising awareness to behaviour change, from a national response to a more decentralized response and to increasing involvement of NGOs and networks of PLHIV.

In 1992, the Government launched the first National AIDS Control Programme (NACP- I) to combat the disease. NACP I was implemented with an objective of slowing down the spread of HIV infections so as to reduce morbidity, mortality and impact of AIDS in the country. National AIDS Control Board (NACB) was constituted and an autonomous National AIDS Control Organization (NACO) was set up to implement the project. In November 1999, the second National AIDS Control Project (NACP- II) was launched with two key objectives to reduce the spread of HIV infection in India AND to increase India's capacity to respond to HIV/AIDS on a long-term basis. In response to the evolving epidemic, the third phase of the national programme (NACP -III) was launched in July 2007 with the goal of Halting and Reversing the Epidemic by the end of project period. Consolidating the gains made during NACP- III, the National AIDS Control Programme Phase- IV (NACP- IV) (2012- 17) was launched to accelerate the process of reversal and to further strengthen the epidemic response in India through a cautious and well defined integration process over the period 2012- 2017 with key strategies of intensifying and consolidating prevention services with a focus on HRG and vulnerable population, increasing access and promoting comprehensive care, support and treatment, expanding IEC services for general population and high risk groups with a focus on behaviour change and demand generation, building capacities at national, state and district levels and strengthening the strategic information management system.

19. Revised National TB Control Programme (RNTCP) (1997)

The Revised National Tuberculosis Control Programme initiated early and firm steps to its declared objective of Universal access to early quality diagnosis and quality TB care for all TB patients'. The year 2012 witnessed innumerable activities happening towards the same. Notification of TB; case-based web-based recording and reporting system (NIKSHAY); Standards of TB care in India; Composite indicator for monitoring programme performance; Rapid scale up of the programmatic management of drug resistant TB services are few of the worthwhile mention in this regard. NIKSHAY, the web-based reporting for TB programme has been another notable achievement initiated in 2012 and has enabled capture and transfer of individual patient data from the remotest health institutions of the country.

20. National Iodine Deficiency Disorders Control Programme (NIDDCP) (1992)

Iodine deficiency disorders (IDD) continue to be a major public health problem in India. Realizing the magnitude of the problem, the Government of India had launched a 100 per cent centrally assisted National Goitre Control Programme (NGCP) in 1962. In August, 1992, the National Goitre Control Programme (NGCP) was renamed as National Iodine Deficiency Disorders Control Programme (NIDDCP) with a view of wide spectrum of Iodine Deficiency Disorders like mental and physical retardation, deaf mutism, cretinism, still births, abortions etc. The programme is being implemented in all the States/UTs for entire population. The goal of NIDDCP is to bring the prevalence of IDD to below 5% in the country and to ensure 100% consumption of adequately iodate salt (15ppm) at the household level.

21. National Leprosy Eradication Programme (NLEP) (1983)

Govt. of India started National Leprosy Control Programme in 1955 based on Dapsone domiciliary treatment through vertical units implementing survey education and treatment activities. Govt. of India established a high-power committee under chairmanship of Dr. M.S. Swaminathan in 1981 for dealing with the problem of leprosy. Based on its recommendations the NLEP was launched in 1983 with the objective to arrest the disease activity in all the known cases of leprosy. The National Health Policy, Govt. of India sets the goal of elimination of leprosy i.e. to reduce the no. of cases to < 1/10,000 population by the year 2005. The National Leprosy Eradication Programme took up the challenge and as a result of the hard work and meticulously planned and executed activities, the country achieved the goal of elimination of leprosy as a public health problem, defined as less than 1 case per 10,000 population, at the National Level in the month of December, 2005.

22. National Mental Health Program (NMHP) (1982)

To address the huge burden of mental disorders and shortage of qualified professionals in the field of mental health, Government of India has been implementing National Mental Health Program (NMHP) since 1982. The Program was re-strategized in 2003 to include two schemes, viz. Modernization of State Mental Hospitals and Up-gradation of Psychiatric

Wings of Medical Colleges/ General Hospitals. The Manpower development scheme (Scheme-A & B) became part of the Program in 2009. The Government has supported the establishment of 23 Centres of Excellence under the National Mental Health Programme (NMHP) since initiation of Scheme. To address the acute shortage of qualified mental health professionals in the country, the Central Government, under the National Mental Health Programme (NMHP) is providing support for implementation of manpower development schemes by States/UTs for establishment of Centres of Excellence and strengthening/ establishment of Post Graduate (PG) Departments in mental health specialties. These schemes have resulted in increasing the availability of additional Human Resources in the field of mental health.

23. National Programme for Control of Blindness and Visual Impairment (NPCB) (1976)

National Programme for Control of Blindness and Visual Impairment (NPCB&VI) was launched in the year 1976 with the goal of reducing the prevalence of blindness to 0.3% by 2020. Various activities/initiatives undertaken during the Five-Year Plans under NPCB are targeted towards achieving the goal of reducing the prevalence of blindness to 0.3% by the year 2020.

(I) Definitions of various Terms used in NHP-2020

Accidental Deaths: The total number of deaths caused by an accident or by causes attributable to forces of nature per 1,00,000 population during the reference year in a given country, territory, or geographical area.

ANC (Ante natal care): It is a systemic supervision of a woman during pregnancy at regular intervals to monitor maternal wellbeing, fetal wellbeing and progress of fetal growth. Minimum ante natal cares include at least three ante natal check-ups, TT immunization and IFA supplement.

Annual Exponential Growth Rate: Annual population growth rate for year t is the exponential rate of growth of midyear population from year $t-1$ to t , expressed as a percentage. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship.

Annual GDP Growth Rate: The annual rate of change of the gross domestic product (GDP) at market prices based on constant local currency, for a given national economy, during a specified period of time. It expresses the difference between GDP values from one period to the next as a proportion of the GDP from the earlier period, usually multiplied by 100.

Birth Rate: The number of live births per 1000 estimated midyear population, in a given year.

Calorie: A calorie is a unit of measurement for energy. In most fields, it has been replaced by the joule, the SI unit of energy. However, it is used for the amount of energy obtained from food.

Case Fatality Rate: the ratio of the number of deaths caused by a specified disease to the number of diagnosed cases of that disease.

Communicable diseases: An illness due to a specific infectious agent or its toxic products capable of being directly or indirectly transmitted from man to man, animal to animal or from the environment(through air, dust, soil, water, food etc.) to man or animal.

Contraceptive Methods: Preventive methods that help women to avoid unwanted pregnancies which include all temporary and permanent measures to prevent pregnancy resulting from coitus.

Crude Birth Rate: The crude birth rate (CBR) is defined as the number of live births in a year per 1,000 population estimated at midyear.

Crude Death Rate: The crude death rate (CDR) is defined as the number of deaths in a year per 1,000 population estimated at midyear.

Daily Calorie Requirement Per Capita: The average number of calories needed to sustain a person at normal levels of activity and health, taking into account the distribution of the population by age, sex, body weight and environmental temperature. (UNDP, human development report 1994).

Decadal Growth Rate: It is defined as the percentage of total population growth in a particular decade. The decadal growth rate is a vital part of Census operations.

Density of Population: Number of persons, living per square kilometre.

Dentists Ratio: The average number of dentists available per every 10,000 inhabitants in a population, at a given year, for a given country, territory, or geographic area.

Dependency Ratio: The average number of economically dependent population per 100 economically productive population, for a given country, territory, or geographic area, at a specific point in time. In demographic terms, economically dependent population is defined as the sum of the population under 15 years of age plus the population 65 years of age and over, for a given country, territory, or geographic area, at a specific point in time, usually mid- year; economically productive population is defined as the population between 15 and 64 years of age, for the same country, territory, or geographic area, at the same specific point in time.

Employment: Any type of work performed or services rendered in exchange for compensation. Compensation may include money (cash) or the equivalent in tuition, fees, books, supplies, room, or for any other benefit.

Family Planning: Family planning refers to practices that help individuals or couples to attain certain objectives:

- a) to avoid unwanted births
- b) to bring about wanted births
- c) to regulate the intervals between pregnancies
- d) to control the time at which births occur in relation to the ages of the parent
- e) To determine the number of children in the family.

Fertility: Fertility means the actual bearing of children during a woman's reproductive period i.e. roughly from 15 to 45, a period of 30 years.

Fertility Rate: The number of live births during a year per 1000 female population aged 15-49 years at the midpoint of the same year.

Foeticide: Induced termination of a pregnancy with destruction of the foetus or embryo; therapeutic abortion.

Gross Domestic Product: The gross domestic product (GDP) at market prices is the sum of gross value added by all resident producers in the economy plus any taxes and minus any subsidies that are not included in the valuation of output. GDP measures the total output of goods and services for final use occurring within the domestic territory of a given country, regardless of the allocation to domestic and foreign claims; it provides an aggregate measure of production. The residency of an institutional unit is defined on the basis of economic interest in the territory for more than a year.

Gross National Product (GNP): The sum of gross value added by all resident producers, plus any taxes (less subsidies) that are not included in the valuation of output, plus net receipts of primary income (employee compensation and property income) from non-resident sources, divided by the mid-year population and converted to us dollars using the world bank's atlas method. This involves using a three-year average of exchange rates to smooth the effects of transitory exchange rate fluctuations.

Habitation: It is a term used to define a group of families living in proximity to each other, within a village. It could have either heterogeneous or homogenous demographic pattern. There can be more than one habitation in a village but not vice versa.

Health expenditures: Health expenditure covers the provision of preventive and curative health services, public health affairs and services, health applied research, and medical supply and delivery systems, but it does not include provision of water and sanitation.

House: Every structure, tent, shelter, etc. was considered as a house irrespective of its use. It might be used for residential or non-residential purposes or both or might not even be vacant.

Household: A group of persons normally living together and taking food from a common kitchen constituted a household. The members of a household might or might not be related by blood to one another.

Infanticide: Putting to the death to a new born with the consent of the parent, family, or community.

Infant Mortality Rate (IMR): Infant mortality rate - (or IMR) is defined as the number of infant deaths in a year per 1,000 live births during the year.

Life expectancy at Birth: The average number of years that a newborn could expect to live, if he or she were to pass through life exposed to the age and sex-specific death rates prevailing at the time of his or her birth, for a specific year, in a given country, territory, or geographic area.

Low Birth Weight: Birth weight less than 2500 grams (up to and including 2499 grams).

Malnutrition: Malnutrition is a general term for the medical condition in a person caused by an unbalanced diet-either too little or too much food, or a diet missing one or more important nutrients. Most commonly, malnourished people either do not have enough calories in their diet, or are eating a diet that lacks protein, vitamins, or trace minerals.

Maternal & Child Health: The term maternal & child health refers to the promotive, preventive, curative & rehabilitative health care for mother & children which includes the sub areas of maternal health, child health, family planning and health aspects of care of children.

Maternal Mortality Ratio (MMR): Annual number of maternal deaths per 100,000 live births. A maternal death is the death of a woman while pregnant or within 42 days of termination of pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.

Mortality Rate from Communicable Diseases: The total number of deaths from communicable diseases in a population of a given sex divided by the corresponding total number of this population, after removing the effect of differences in the age distribution, expressed per 100,000 population for a given year, in a given country, territory, or geographic area.

Mortality Rate from Non-Communicable Diseases: The total number of deaths from non-communicable diseases in a population of a given sex divided by the corresponding total number of this population, after removing the effect of differences in the age distribution, expressed per 100,000 population for a given year, in a given country, territory, or geographic area.

Non-communicable Diseases: Diseases that cannot be directly transmitted from man to man, animal to animal or from the environment (through air, dust, soil, water, food etc.) to man or animal are deemed as non-communicable diseases.

Old Age Dependency Ratio: The proportion of persons above 65 years of age are considered to be dependent on the economically productive age group (15-64 years)

One-year-olds immunized against measles: Percentage of 1-year-olds who have received at least one dose of measles-containing vaccine in a given year. For countries recommending the first dose of measles among children older than 12 months of age, the indicator is calculated as the proportion of children aged less than 24 months receiving one dose of measles-containing vaccine.

Percentage covered with Safe Water: The percentage of the population that has safe drinking water available in the home or with reasonable access.

Percentage covered with Sanitation: The percentage of the population that has adequate excreta-disposal facilities available.

Percentage of Contraceptive Users: Percentage of eligible couples effectively protected against childbirth by one or the other approved methods of family planning, viz sterilization, IUD (intra-uterine devices), condom or oral pills.

Percentage of Infants Immunized: The percentage of infants reaching their first birthday that have been immunized against each of the six EPI-target diseases (Diphtheria, Pertussis, tetanus, polio, measles and tuberculosis). The denominator used in the calculation is the number of infants surviving to age one.

Peri-natal Mortality Rate: Peri-natal mortality rate includes late foetal deaths (28 weeks gestation & more) and early neonatal deaths (first week) in one year per 1000 live births in the same year.

Pharmacists Ratio: The average number of pharmacists available per every 10,000 inhabitants in a population, at a given year, for a given country, territory, or geographic area.

Physicians Ratio: The average number of physicians available per every 10,000 inhabitants in a population, at a given year, for a given country, territory, or geographic area.

Population: All inhabitants of a country, territory, or geographic area, for a given sex and/or age group, at a specific point of time. In demographic terms, it is the number of inhabitants of a given sex and/or age group that actually live within the border limits of the country, territory, or geographic area at a specific point of time, usually mid- year. The mid-year population refers to the actual population at July 1st.

Population 65 Years & Over: The percentage of total population of a country, territory, or geographic area, 65 years of age and over, for a given sex and at a specific point of time, usually mid-year. **Proportion of Urban Population:** The percentage of total population of a country, territory, or geographic area living in places defined as urban, at a specific point of time, usually mid-year.

Post-natal Mortality Rate: Number of deaths of Children between 28 days and one year of age in a given year per 1000 total live births in the same year.

Poverty: It is a situation in which a person is unable to get minimum basic necessities i.e. food, clothing and shelter for his /her sustenance. The inability to attain a minimum standard of living. The World Bank uses a poverty line of consumption less than us\$1.00 a day (at constant 1985 prices) per person.

Poverty Line: Poverty estimates in our country are derived from the household consumer expenditure data collected by National Sample Survey organisation (NSSO) every fifth year. The 'Poverty line' has been calculated for 2009-10 to be Rs. 672.8 per month per capita for rural India and Rs.859.6 per month per capita for urban India. (according to Tendulkar Committee Report).

Prevalence: The number of events, e.g., instances of a given disease or other condition, in a given population at a designated time; sometimes used to mean "prevalence rate": When used without qualification, the term usually refers to the situation at a specified point in time (point prevalence). Prevalence rate (ratio) is the total number of all individuals who have an attribute or disease at a particular time (or during a particular period) divided by the population at risk of having the attribute or disease at this point in time or midway through the period.

Primary Health Care: Essential health care that is technically valid, economically feasible and socially acceptable. Primary health care includes eight essential elements: education concerning prevailing health problems and the methods of preventing and controlling them; promotion of food supply and proper nutrition; an adequate supply of safe water and basic sanitation; maternal and child health care, including family planning; immunization against the major infectious diseases; prevention and control of locally endemic diseases; appropriate treatment of common diseases and injuries; and provision of essential drugs.

Professional Nurses Ratio: The average number of certified nurses available per every 10,000 inhabitants in a population, at a given year, for a given country, territory, or geographic area. Certified nurses do not include auxiliary and unlicensed personnel.

Proportion of Population Below National Poverty Line: The percentage of the population living below the national poverty line in a given country, territory, or geographic area, for a given sex and/or age group, at a specific period in time, usually a year. The operational definition for a national poverty line varies from country to country and represents the amount of income required by each household to meet the basic needs of all its members and Percentage of Population below poverty line has declined from 37.2 (2004-05) to 29.8 (2009-10 as per Tendulkar Methodology).

Proportion of Deliveries attended by Trained Personnel: The number of deliveries assisted by trained personnel in a specific year, regardless of their site of occurrence, expressed as a percentage of the total number of births in that

same year, in a given country, territory, or geographic area. Trained personnel include medical doctors, certified nurses and midwives; not included are traditional birth attendants, trained or not.

Public Sector Expenditures: Annual public health expenditure as a proportion of the national health expenditure. The size of the public expenditure on health care goods and services for a given national economy, at a given period in time, usually a year, expressed as a percentage of the corresponding national health expenditure. It represents the governmental share, not limited to the ministry of health, of the total annual expenditure for covering the provision of preventive and curative health services, public health affairs and services, health applied research, and medical supply and delivery systems, excluding the provision of water and sanitation.

Still Birth Rate: Death of a foetus weighing 1000g (equivalent to 28 weeks of gestation) or more, during one year in every 1000 total births.

Total Fertility Rate: Number of children that would be born per woman, assuming no female mortality at childbearing age and the age-specific fertility rates of a specified country and reference period.

Unmet need of Planning: Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have unmet need for spacing if they are:

- At risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant.
- Pregnant with a mistimed pregnancy.
- Postpartum amenorrhea for up to two years following a mistimed birth and not using contraception.
- Women are considered to have unmet need for limiting if they are:
- At risk of becoming pregnant, not using contraception, and want no (more) children.
- Pregnant with an unwanted pregnancy.
- Postpartum amenorrhea for up to two years following an unwanted birth and not using contraception.

Women who are classified as in-fecund have no unmet need because they are not at risk of becoming pregnant. Unmet need for family planning is the sum of unmet need for spacing plus unmet need for limiting.

Urban: The term urban refers to towns (places with municipal corporation, municipal area committee, notified area committee or cantonment board); also, all places having 1000 or more inhabitants, a density of not less than 1000 persons per sq. mile or 390 per sq. km, pronounced urban characteristics and at least three-fourths of the adult male population employed in pursuits other than agriculture. **Proportion of Rural Population:** The percentage of total population of a country, territory, or geographic area living in places defined as rural, at a specific point of time, usually mid-year. The term rural refers essentially to villages and other rarely populated areas.

(J). Important Health Days

Month	Day	Observed As
Jan	12	National Youth Day
	24	National Girl Child Day
	Last Sunday of Jan/ 31 st Jan	World Leprosy Day/ Anti-Leprosy Day
February	4	World Cancer Day
	6	International Day of Zero Tolerance to Female Genital Mutilation
	10	National Deworming Day
	11	World Unani Day
	12	Sexual Reproductive Health Awareness Day
March	4	National Safety Day
	6	Glaucoma Day
	8	International Women's Day
	Second Wednesday of March/ 11	No Smoking Day
	Second Thursday of March/ 12	World Kidney Day
	12 to 18	World Glaucoma Week
	15	World Disabled day/ World Consumer Rights Day
	16	Measles Immunization Day
	20	World Oral Health Day
	21	World Down Syndrome Day/ World Forestry Day
	22	World Day for Water
	24	World TB day
	26	World Epilepsy Day
April	2	World Autism Awareness Day
	7	World Health Day
	11	World Parkinson's Day
	17	World Haemophilia Day
	19	World Liver Day
	22	Earth Day
	25	World Malaria Day
	Last Week of April (24 - 30)	World Immunization Week
May	First Tuesday of May/ 6	World Asthma
	Second Sunday of May	Mother's Day (Related to health/ nutrition of mother's)
	5	SAVE LIVES: Clean Your Hands
	8	World Red Cross Day
	9	World Thalassaemia Day
	12	World Chronic Fatigue Syndrome Awareness Day/ International Nurses Day

Month	Day	Observed As
	16	National Dengue Day
	19	World Family Doctor Day
	May 25 (Last Wednesday of May)	World Multiple Sclerosis Day
	28	International Day of Action for Women's Health / International Women's Health Day
	31	Anti-tobacco Day/ World No Tobacco Day
June	5	World Environment Day
	8	World Brain Tumour Day
	14	World Blood Donation Day
	15	World Elder Abuse Awareness Day
	18	Autistic Pride Day
	19	World Sickle Cell Day
	21	Yoga Day
	26	International Day against Drug Abuse and Illicit Trafficking
July	1	National Doctors Day
	11	World Population Day
	28	World Hepatitis Day
	29	ORS Day
August	1 to 7	World Breast Feeding Week
	20	World Mosquito Day
	25 Aug to 8 Sep	Eye Donation Fortnight
September	1 to 7	National Nutrition Week
	5	Spinal Cord Injury Day
	10	World Suicide Prevention Day
	12	World Oral Health Day
	16	World Marrow Donor Day
	17	World Patient Safety Day
	21	World Alzheimer's Day
	25	World Pharmacist Day
	26	World Day of the Deaf
	28	World Rabies Day
	29	World Heart Day
October	Entire October	Breast Cancer Awareness Month
	1	International Day for the Elderly/ World Vegetarian Day
	2	National Anti-Drug Addiction Day
	First Wednesday of October	World Cerebral Palsy Day
	9	World Sight Day

Month	Day	Observed As
	10	World Mental Health Day
	12	World Arthritis Day
	13	World Thrombosis Day
	15	Global Handwashing Day
	16	World Food Day
	17	World Trauma Day
	20	World Osteoporosis Day
	21	World Iodine Deficiency Day
	24	World Polio Day
	26	World Obesity Day
	29	World Stroke Day
	30	World Thrift Day
November	10	World Immunization Day
	12	World Pneumonia Day
	13 to 19	World Antibiotic Awareness Week
	14	Diabetes Day
	17	World Prematurity Day/ National Epilepsy Day

NATIONAL HEALTH PROFILE OF INDIA

The National Health Profile of India (NHP) is an initiative at par with international standards of data publications. The objective of this publication is to create a versatile database of health information of India which is comprehensive, up-to-date and easily accessible to all stakeholders in the healthcare sector. NHP provides recent trends in demography, disease profile (communicable and non-communicable/lifestyle diseases) and available health resources that define a country's health status. Following the standard coding from Family of International classification (FIC) in presenting the diseases profile will improve interoperability of the data internationally. NHP provides relevant information to the planners, policy makers, health administrators, research workers and others engaged healthcare sector to take informed decisions. This publication will also be useful for medical post graduates and trainees of medical and paramedical personnel and will contribute further to the improvement of quality of health services and equitable distribution of health resources in the country.

The research team for NHP assessed a large number of websites and publications dealing with management of health data relevant to health status of a nation and adopted a modified structure of six – indicators - Demographic, Socio-Economic, Health Status, Health Finance, Health Infrastructure and Human Resource in Health Sector in order to organize and manage the health information of India. This structure was discussed in great detail (with a range of people from senior health policy makers, administrators to epidemiologists and anthropologists) to assess its robustness to handle data now and afterwards and the need to include or exclude data from the existing publications. Identifying the most appropriate data sources for the selected indicators is an on-going research. Eventually we present the most updated data identified from various sources and are illustrated in the new format of tables with various combinations of parameters such as age, sex, urban, rural etc.

NHP can contribute towards providing better universal and equitable healthcare to its people as envisaged in National Health Policy 2017 as it helps in informed decision making on policies and initiatives of various stakeholders in healthcare sector. Nevertheless, we recognize the need for continuous improvement of this publication to match the ever-changing health needs of people and the paradigm shifts in program implementation to achieve higher levels of effectiveness. We envision that this structure of data organization will undergo further standardization and enhancement of the database
